Innovations and Advanced Techniques in Computer and Information Sciences and Engineering Tarek Sobh, 2007-09-04 Innovations and Advanced Techniques in Computer and Information Sciences and Engineering includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computer Science Computer Engineering and Information Sciences Innovations and Advanced Techniques in Computer and Information Sciences and Engineering includes selected papers from the conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering SCSS 2006 which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2006 All aspects of the conference were managed on line not only the reviewing submissions and registration processes but also the actual conference Conference participants authors presenters and attendees only needed an internet connection and sound available on their computers in order to be able to contribute and participate in this international ground breaking conference The on line structure of this high quality event allowed academic professionals and industry participants to contribute work and attend world class technical presentations based on rigorously refereed submissions live without the need for investing significant travel funds or time out of the office Suffice to say that CISSE received submissions from more than 70 countries for whose researchers this opportunity presented a much more affordable dynamic and well planned event to attend and submit their work to versus a classic on the ground conference The CISSE conference audio room provided superb audio even over low speed internet connections the ability to display PowerPoint presentations and cross platform compatibility the conferencing software runs on Windows Mac and any other operating system that supports Java In addition the conferencing system allowed for an unlimited number of participants which in turn granted CISSE the opportunity to allow all participants to attend all presentations as opposed to limiting the number of available seats for each session

Consciousness in Humanoid Robots Antonio Chella, Angelo Cangelosi, Giorgio Metta, Selmer Bringsjord, 2019-06-05 Building a conscious robot is a scientific and technological challenge Debates about the possibility of conscious robots and the related positive outcomes and hazards for

human beings are today no longer confined to philosophical circles Robot consciousness is a research field aimed at a two part goal on the one hand scholars working in robot consciousness take inspiration from biological consciousness to build robots that present forms of experiential and functional consciousness On the other hand scholars employ robots as tools to better understand biological consciousness Thus part one of the goal concerns the replication of aspects of biological consciousness in robots by unifying a variety of approaches from AI and robotics cognitive robotics epigenetic and affective robotics situated and embodied robotics developmental robotics anticipatory systems and biomimetic robotics Part two of the goal is pursued by employing robots to advance and mark progress in the study of consciousness in humans and animals Notably neuroscientists involved in the study of consciousness do not exclude the possibility that robots may be conscious This eBook comprises a collection of thirteen manuscripts and an Editorial published by Frontiers in Robotics and Artificial Intelligence under the section Humanoid Robotics and Frontiers in Neurorobotics on the topic Consciousness in Humanoid Robots This compendium aims at collating the most recent theoretical studies models and case studies of machine consciousness that take the humanoid robot as a frame of reference The content in the articles may be applied to many different kinds of robots and to software agents as well

Cooperative Information Agents V Matthias Klusch, Franco Zambonelli, 2003-06-30 These are the proceedings of the Fifth International Workshop on Cooperative Information Agents held in Modena Italy September 6 8 2001 Information agent technology has become one of the major key technologies for the Internet and the World Wide Web It mainly emerged as a response to the challenges of cyberspace from both the technological and human user perspective Development of information agents requires expertise from different research disciplines such as Artificial Intelligence AI advanced databases and knowledge base systems distributed information systems information retrieval and Human Computer Interaction HCI The fifth international workshop on Cooperative Information Agents CIA continued the tradition by capturing the intrinsic interdisciplinary nature of the above research area by calling for contributions from different research communities and by promoting open and informative discussions on all related topics In keeping with tradition the workshop featured a sequence of regular and invited talks of excellence given by leading experts in the field This year the topics of the talks are mainly on the challenges of information agents in the upcoming age of ubiquitous and pervasive computing These challenges are in particular due to the necessity of an efficient utilization evolution and trust management of information agents for user oriented information search provision and visualization in networked computing environments with small mobile and embedded devices A different issue concerns the potential of agent based support of massive distributed data warehousing worldwide

Agent-Based Software Development , 2004

The Origins of Vowel Systems Bart De Boer, 2001 This book addresses the question of how the properties of human vowel systems can be explained Though it is found that vowel systems of human languages are optimal for communicative purposes it is not clear who is doing the optimization If children learn a language they learn to produce sounds that are as close as possible to those used by their parents and peers The hypothesis is put forward that the optimization is the result of self organization in a population of language users Self organization is the emergence of order on a global scale in a system where there are only local interactions It is a phenomenon that appears in many natural systems from purely physical ones such as crystals to systems composed of living organisms such as colonies of insects Recent developments in linguistics indicate that self organization might also play an important role in language The theory is put to the test by implementing it as a computer model This computer model simulates the interaction in a population of artificial agents that can each produce and perceive vowels in a human like way The vowel systems that emerge from the computer simulations closely resemble human vowel systems It is also shown that many simple variations on the basic system can be investigated thus providing valuable insight into the dynamics of systems of speech sounds The ultimate aim of the book is to provide insight into how language has evolved It

turns out that the mechanism of self organization can make it easier to explain the evolution of language since it provides an alternative mechanism for the emergence of certain linguistic structures

Agent-Oriented Software Engineering III

Fausto Giunchiglia, James Odell, Gerhard Weiß, 2003-07-01 Over the past three decades software engineers have derived a progressively better understanding of the characteristics of complexity in software It is now widely recognised that interaction is probably the most important single characteristic of complex software Software architectures that contain many dynamically interacting components each with their own thread of control and engaging in complex coordination protocols are typically orders of magnitude more complex to correctly and efficiently engineer than those that simply compute a function of some input through a single thread of control Unfortunately it turns out that many if not most real world applications have precisely these characteristics As a consequence a major research topic in computer science over at least the past two decades has been the development of tools and techniques to model understand and implement systems in which interaction is the norm Indeed many researchers now believe that in future computation itself will be understood as chiefly a process of interaction

Software Agents and Soft Computing: Towards Enhancing Machine Intelligence Hyacinth S.

Nwana, 1997-01-22 This carefully arranged book is mainly based on work done by the Intelligent Systems Research Group at BT Laboratories essentially in cooperation with internationally leading scientists from outside BT It opens with a detailed introduction surveying the area and putting the work presented in context Conceptual issues surrounding intelligent agents and multi agent systems are investigated and the practical and industrial applicability of this exciting new technology is demonstrated One section is devoted to the rationale philosophy and techniques of the emerging area of soft computing The final section outlines the broader context in dealing with machine intelligence in general and intelligent software systems in particular

Computational Logic in Multi-Agent Systems João Leite, 2004-11-16 Over recent years the notion of agency has claimed a major role in defining the trends of modern research Involving a broad spectrum of disciplines such as sociology psychology philosophy and many more the agent paradigm virtually invaded every subfield of computer science because of its promising applications for the Internet and in robotics Multi agent systems MAS are communities of problem solving entities that can perceive and act upon their environments to achieve their individual goals as well as joint goals The work on such systems integrates many technologies and concepts in artificial intelligence and other areas of computing There is a full spectrum of MAS applications that have been and are being developed from search engines to educational aids to electronic commerce and trade Although commonly implemented by means of imperative languages mainly for reasons of efficiency the agent concept has recently increased its influence in the research and development of computational logic based systems Computational logic by virtue of its nature both in substance and method provides a well defined general and rigorous framework for systematically studying computation be it syntax semantics and procedures or implementations environments tools and standards Computational logic approaches problems and provides solutions at a sufficient level of abstraction so that they generalize from problem domain to problem domain ordered by the nature of its very foundation in logic both in substance and method which constitutes one of its major assets Artificial General Intelligence 2008 P. Wang, B. Goertzel, S. Franklin, 2008-02-18 The field of Artificial Intelligence AI was initially directly aimed at the construction of thinking machines that is computer systems with human like general intelligence But this task proved more difficult than expected As the years passed AI researchers gradually shifted focus to producing AI systems that intelligently approached specific tasks in relatively narrow domains In recent years however more and more AI researchers have recognized the necessity and the feasibility of returning to the original goal of the field Increasingly there is a call to focus less on highly specialized narrow AI problem solving systems and more on confronting the difficult issues involved in creating human level intelligence and ultimately general intelligence that goes beyond the human level in various ways Artificial General Intelligence AGI as this renewed focus has come to be called attempts to study and reproduce intelligence as a whole in a domain independent way Encouraged by the recent success of several smaller scale AGI related meetings and special tracks at conferences the initiative to organize the very first international conference on AGI was taken with the goal to give researchers in the field an opportunity to present relevant research results and to exchange ideas on topics of common interest In this collection you will find the conference papers full length papers short position statements and also the papers presented in the post conference workshop on the sociocultural ethical and futurological implications of AGI **Advanced**
