Machine Translation And Translation Theory:

Machine Translation and Translation Theory Christa Hauenschild, Susanne Heizmann, 2011-08-02 The series serves to propagate investigations into language usage especially with respect to computational support This includes all forms of text handling activity not only interlingual translations but also conversions carried out in response to different communicative tasks Among the major topics are problems of text transfer and the interplay between human and machine activities

Machine Translation and Translation Theory Omri Asscher, 2025-07-17 Pervasive and ubiquitous machine translation systems have been transforming communication and understanding across languages and cultures on a historical scale Focused on both Neural Machine Translation tools such as Google Translate and generative AI tools such as ChatGPT Omri Asscher pursues the juncture between machine translation and the diverse often competing frameworks of human translation theory He shines a light on the subtleties of the intersection between the two the places where machine translation corresponds well with the ideas that have been developed on human translation throughout the years and the places where machine translation seems to challenge translation theory and perhaps even require that we rethink some of its basic assumptions Machine Translation and Translation Theory reflects the need for an accessible panoramic view on the subject It offers a detailed discussion of various points of theoretical interest definitions of translation equivalence in translation aesthetics of translation translation ethics translation as cross cultural communication and translation s historical agency This is key reading for researchers and students in translation studies as well as scholars of AI mediated communication and computer scientists interested in how machine translation architectures correspond with the understanding of translation in the humanities

The Possibility of Language Alan K. Melby, Terry Warner, 1995-12-08 This book is about the limits of machine translation It is widely recognized that machine translation systems do much better on domain specific controlled language texts domain texts for short than on dynamic general language texts general texts for short The authors explore this general domain distinction and come to some uncommon conclusions about the nature of language Domain language is claimed to be made possible by general language while general language is claimed to be made possible by the ethical dimensions of relationships Domain language is unharmed by the constraints of objectivism while general language is suffocated by those constraints Along the way to these conclusions visits are made to Descartes and Saussure to Chomsky and Lakoff to Wittgenstein and Levinas From these conclusions consequences are drawn for machine translation and translator tools for linguistic theory and translation theory The title of the book does not question whether language is possible it asks with wonder and awe why communication through language is possible

Translation and Practice Theory Maeve Olohan, 2020-10-13 Translation and Practice Theory is a timely and theoretically innovative study linking professional practice and translation theory showing the usefulness of a practice theoretical approach in addressing some of the challenges that the professional world of translation is currently facing including for example the increasing deployment of

Reflections on Translation Theory Andrew Chesterman, 2017-04-26 Originally published in different journals and collected volumes these papers in conceptual analysis cover some central topics in translation theory and research types of theory and hypothesis causality and explanation norms strategies and so called universals translation sociology and ethics. There are critical reviews of Catford s theory and of Skopos theory and of Kundera s views on literary translation and detailed analyses of the literal translation hypothesis and the unique items hypothesis. The methodological discussions which draw on work in the philosophy of science will be of special relevance to younger researchers for example those starting work on a doctorate. Some of the arguments and positions defended for instance on the significant status of conceptual interpretive hypotheses and the ideal of consilience relate to wider ongoing debates and will interest any scholar who is concerned about the increasing fragmentation of the field and about the future of Translation Studies. Let the dialogue continue.
