Magic Bullet Understanding The Revolution In Military Affairs:

The Magic Bullet? Tim Benbow, 2004-06-30 Bombing by use of laser guided weaponry is evolution not revolution aircraft have been bombing for more than 85 years but a network of sensors in space or on the sea bed that can track every move without human involvement may be revolution This and other technical advances may enable intervention and prevention without conflict certainly with non lethal weaponry The future structure of armed forces the nature and size of defence industries the potential risk of there being a single superpower and many other matters depend on how much the present and future change in military affairs is evolution and how much is genuine revolution This study based on report papers prepared for the Ministry of Defence and praised for their clarity offers clear analysis of the debate for lay students of current and military affairs as well as professionals working in the fields of politics science security and military strategy and planning

Fifth Generation Warfare Armin Krishnan, 2024-03-11 This book outlines the concept of Fifth Generation Warfare 5GW and demonstrates its relevance for understanding contemporary conflicts Non kinetic modes of attack and war waged by groups or non state actors at the societal level has been termed 5GW This book discusses the theory of generational warfare and explores the key ideas of 5GW such as secrecy the manipulation of proxies the manipulation of identity and culture including disinformation and big data and the use of psychological warfare These techniques are used to achieve strategic objectives such as inducing desired behaviour and controlling human terrain without resorting to overt war or overt violence The text expands the debate on 5GW by exploring emerging technologies and how they could be used for maliciously shaping human society and even for maliciously changing the genetic makeup of a population for the purpose of unprecedented social control The work closes with comments on the possibility of a Sixth Generation of Warfare which targets technical systems to possibly collapse a society through strategic sabotage Overall the book demonstrates the relevance of 5GW for understanding contemporary conflicts from the Arab Spring to the war in Ukraine in terms of the need for dominating the human domain This book will be of interest to students of security and technology defence studies and International Relations

aims through the application of a variety of methods military and non military including the manipulation of public opinion the use of economic leverage and external security approaches known as Russia s hybrid war operations to gain the advantage over a militarily and economically superior adversary The book discusses how Russia s security policy has been and is being applied in specific cases including the present war in Ukraine the Russian anti satellite program and Russia s contemporary Afghan policy The aim of the book is to explain how and why Russia uses different security strategies and methods using these three cases

Indian and American Perspectives on Technological Developments in the Maritime Domain and Their Strategic Implications in the Indian Ocean Region Vice Admiral Pradeep

Kaushiva, Commander Kamlesh K Agnihotri, 2013-04-15 The maritime domain hosting the highways of global prosperity through trade industrial raw material and energy links rates high in its potential for conflict As the global pendulum of economic vibrancy swings eastwards the Indian Ocean Region IOR has been receiving increasing attention from all actors state as well as non state ones and now presents itself in sharp focus as one of the volatile seascapes on this earth The navies operating in the region will therefore need to depend on high technology and associated doctrines and procedures so as to effectively deal with the wide spectrum of challenges therein It will also become incumbent upon such littoral states as can afford the high cost of technology to catch up so as to maintain their relevance in the great game being played out in their very own backyard The United States as a leader in inventing and exploiting technology sets its own benchmarks in internalization of advanced technologies to undertake maritime missions at and from the sea in support of its military operations ashore China on the other hand has been striving towards achieving asymmetric war fighting capabilities supported by other developing technologies as well as core capabilities like the Beidou position fixing system which would be central to network centric operations including missile guidance systems As the IOR increasingly transforms into an arena of extra regional power play the implications of technologically enabled confrontations and their impact on resident states are poised to weigh in on a scale never imagined before There is thus a greater need for India to gain in depth knowledge of and develop a perspective on advanced technology sensors weapons supporting infrastructures doctrines and futuristic concepts in the maritime domain and their potential as strategic game changers in the IOR This book aims to foster greater understanding of the challenges facing the IOR and also look at how the technological advances in the maritime domain may possibly handle such challenges It should provide useful resource material to those investigating the impact of technology on meeting the maritime challenges in the IOR

Routledge Handbook of Naval Strategy and Security Joachim Krause, Sebastian Bruns, 2016-03-17 This new handbook provides a comprehensive overview of the issues facing naval strategy and security in the twenty first century Featuring contributions from some of the world's premier researchers and practitioners in the field of naval strategy and security this handbook covers naval security issues in diverse regions of the world from the Indian Ocean and the Mediterranean to the Arctic and the piracy prone waters off East Africa's coast It outlines major policy challenges arising from competing claims transnational organized crime and maritime terrorism and details national and alliance reactions to these problems While this volume provides detailed analyses on operational judicial and legislative consequences that contemporary maritime security threats pose it also places a specific emphasis on naval strategy With a public very much focused on the softer constabulary roles naval forces play such as humanitarian assistance disaster relief naval diplomacy maintenance of good order at sea the overarching hard power role of navies has been pushed into the background In fact navies and seapower have been notably absent from many recent academic discussions and deliberations of maritime

security This handbook provides a much desired addition to the literature for researchers and analysts in the social sciences on the relationship between security policy and military means on land and from the sea It comprehensively explains the state of naval security in this maritime century and the role of naval forces in it This book will be of much interest to students of naval security and naval strategy security studies and IR as well as practitioners in the field **US Intervention Policy and Army Innovation** Richard Lock-Pullan,2004-08-02 US Intervention Policy and Army Innovation examines how the US Army rebuilt itself after the Vietnam War and how this has affected US intervention policy from the victory of the Gulf War to the failure of Somalia the Bosnian and Kosovo interventions and the use of force post 9 11 Richard Lock Pullan analyzes the changes in US military intervention strategy by examining two separate issues the nature of the US Army as it rebuilt itself after the Vietnam War and the attempts by the US to establish criteria for future military interventions He first argues that US strategy traditionally relied upon national mobilization to coordinate political aims and military means he subsequently analyzes how this changed to a formula of establishing militarily achievable political objectives prior to the use of force Drawing on a vast body of material and on strategic culture and military innovation literature Lock Pullan demonstrates that the strategic lessons were a product of the rebuilding of the Army's identity as it became a professional all volunteer force and that the Army's new doctrine developed a new way of war for the nation embodied in the AirLand Battle doctrine which changed the approach to strategy This book finally gives a practical analysis of how the interventions in Panama and the Gulf War vindicated this approach and brought a revived confidence in the use of force while more recent campaigns in Somalia Kosovo and Bosnia exposed its weaknesses and the limiting nature of the Army's thinking The legacy of the Army's innovation is examined in the new strategic environment post 9 11 with the operations in Afghanistan and Iraq **Killer Robots** Armin Krishnan,2016-04-22 Military robots and other potentially autonomous robotic systems such as unmanned combat air vehicles UCAVs and unmanned ground vehicles UGVs could soon be introduced to the battlefield Look further into the future and we may see autonomous micro and nanorobots armed and deployed in swarms of thousands or even millions This growing automation of warfare may come to represent a major discontinuity in the history of warfare humans will first be removed from the battlefield and may one day even be largely excluded from the decision cycle in future high tech and high speed robotic warfare Although the current technological issues will no doubt be overcome the greatest obstacles to automated weapons on the battlefield are likely to be legal and ethical concerns Armin Krishnan explores the technological legal and ethical issues connected to combat robotics examining both the opportunities and limitations of autonomous weapons He also proposes solutions to the future regulation of military robotics through international law **British Naval Aviation** Dr Tim Benbow,2013-07-28 In 1909 the British Admiralty placed an order for a rigid airship marking the beginning of the Royal Navy's involvement with airpower This collection charts the Navy's involvement with aviation over the following century and the ways in which its rapid expansion and evolution radically altered the nature of

maritime power and naval strategy Drawing on much new historical research the collection takes a broadly chronological approach which allows a scholarly examination of key themes from across the history of British naval aviation The subjects tackled include long standing controversies over the control of naval air power crucial turning points within British defence policy and strategy the role of naval aviation in limited war and discussion of campaigns such the contribution of the Fleet Air Arm in the Mediterranean and Pacific theatres of the Second World War that have hitherto received relatively little attention The collection concludes with a discussion of recent debates surrounding the Royal Navy s acquisition of a new generation of carriers setting the arguments within an historical context Taken as a whole the volume offers fascinating insights into the development of a key aspect of naval power as well as shedding new light on one of the most important aspects of Britain s defence policy and military history By simultaneous addressing historical and current political debates it is sure to find a ready audience and stimulate further discussion
