Magnetic Fields:

Biological Effects of Magnetic Fields Madeleine F. Barnothy, 2012-12-06 We define biomagnetism broadly as the science of processes and functions in living organisms induced by static magnetic fields Biomagnetic research has greatly increased since the publication of the first volume of this series While much of this work has been reported in various international journals there exists a need for this work to be collected together in one place This book covers a rather wide area of research both with respect to the strength of the field ranging from zero to 150 000 oersteds and with respect to the various specimens and their biological functions It is designed primarily to help clarify the action of magnetic fields on biological systems with the hope of achieving a better understanding of the fundamental physiological processes occurring in them In some chapters it is suggested that magnetic fields could ultimately be used in the treatment of disease I would like to take this occasion to thank the contributors for their generous interest and willing cooperation M F B June 1969 Chicago Illinois v CONTRIBUTORS Robert A Abler Varian Associates Palo Alto California page 1 M M Alexandrovskaya Institute of Higher Nervous Activity and Neuro physiology Academy of Sciences Moscow USSR page 215 Jena M Barnothy Biomagnetic Research Foundation Evanston Illinois page 61 Madeleine F Barnothy College of Pharmacy University of Illinois Chicago Illinois pages xi 103 Robert O Becker State University of New York Upstate Medical Center Syracuse Veterans Administration Hospital Syracuse New York page 207

Magnetic Fields in the Solar System Hermann Lüher, Johannes Wicht, Stuart A. Gilder, Matthias Holschneider, 2018-01-10 This book addresses and reviews many of the still little understood questions related to the processes underlying planetary magnetic fields and their interaction with the solar wind With focus on research carried out within the German Priority Program PlanetMag it also provides an overview of the most recent research in the field Magnetic fields play an important role in making a planet habitable by protecting the environment from the solar wind Without the geomagnetic field for example life on Earth as we know it would not be possible And results from recent space missions to Mars and Venus strongly indicate that planetary magnetic fields play a vital role in preventing atmospheric erosion by the solar wind However very little is known about the underlying interaction between the solar wind and a planet's magnetic field The book takes a synergistic interdisciplinary approach that combines newly developed tools for data acquisition and analysis computer simulations of planetary interiors and dynamos models of solar wind interaction measurement of ancient terrestrial rocks and meteorites and laboratory investigations

Magnetism when extended beyond normal frameworks into cosmic space is characterized by an enormous spatial scale Because of their large sizes the nature of magnets such as the Earth and the Sun is entirely different from the nature of a horseshoe magnet The source of cosmic magnetism is associated with the hydrodynamic motions of a highly conductive medium In this aspect cosmic magnets resemble a dynamo However currents in the dynamo flow along properly ordered wires while chaotic turbulent motions are dominant inside stars and liquid planetary cores This makes more intriguing and surprising the fact that these motions maintain a regular magnetic field Maintenance of magnetic fields is even more impressive in huge magnets i e galaxies In fact we are living inside a giant dynamo machine the Milky Way galaxy Although the idea of the global magnetic field of our Galaxy was clearly proposed almost 40 years ago firm observational evidence and definite theoretical concepts of galactic magnetism have been developed only in the last decade This book is the first attempt at a full and consistent presentation of this problem We discuss both theoretical views on the origin of galactic magnetism and the methods of observational study Previous discussions were on the level of review articles or separate chapters in monographs devoted to cosmic magnetic fields see e g H K Moffatt 1978 E N Parker 1979 and Zeldovich et al 1983
