Andreucci,2012-12-06 The aim of the INTERNATIONAL YEARBOOKS OF NEPHROLOGY is to publish every year a volume to keep nephrologists up to date on all the rapidly changing areas of nephrology Each volume will be published by the end of each calendar year which corresponds with the annual meeting of the American Society of Nephrology Each issue of the INTERNATIONAL YEARBOOKS OF NEPHROLOGY will be divided into sections each section will have different primary focus every year depending upon what area is of greatest interest at the time In other words each annual volume will deal with what is truly current in nephrology All the authors appointed for the chapters of the INTERNATIONAL YEARBOOKS OF NEPHROLOGY are known experts in the field who will give an objective review of the topic up dating the readers on the world wide literature A crucial point for the success of the INTERNATIONAL YEARBOOKS OF NEPHROLOGY is the list of the references at the end of each chapter We have asked all authors to provide a complete accurate and up to date list of important references In order to guarantee the most up to date yearbook very rapid production is mandatory Rapid publication can be obtained only with camera ready manuscripts for direct photo offset reproduction Thus we have agreed to use photo offset printing for the series For the first issue of the series the INTERNATIONAL YEARBOOK OF NEPHROLOGY 1989 the Editorial Board has focused attention on the latest and most important scientific and clinical advances in nephrology *Critical Care Nephrology* Claudio Ronco,Rinaldo Bellomo,John A. Kellum,2009-01-01 This 2nd edition of Critical care nephrology continues to provide comprehensive coverage of the latest advances in critical care procedures for the adult or pediatric patient with renal diseases or disorders It presents a common language and standardized guidelines to help multi disciplinary physicians caring for the critically ill communicate more effectively BOOK JACKET **Basic, Clinical, and Surgical Nephrology** L.J. Didio,P. Motta,2012-12-06 This unique volume may very well foreshadow the treatment of renal disease in the twenty first century The editors have obviously compiled and reviewed the current clinical problems in which the kidney plays a major role They then selected as topics for chapters those in which recent scientific investigations have added significant new data The investigators themselves or their peers have been persuaded to produce a summary of current concepts of renal structure and function for each topic The result is a volume which will be as invaluable as a clinical guide on the laboratory bench as it will be a reference for the clinician seeking guidance to rational therapy at the bedside The strength of the volume lies in the incorporation of those data on renal cellular structure and function which hold the key to the etiology of the majority of renal diseases we now call end stage Fully two thirds of the volume is devoted to current concepts of renal function and related subcellular structure of

various renal tissues The illustrations correlations and explanations are superbly presented in much detail and with an obvious effort to fill out the current knowledge of each subject We may anticipate this book will remain a valuable reference for many years to come

Regenerative Nephrology Michael S. Goligorsky, 2010-11-26 Progression of chronic diseases in general and chronic kidney disease in particular has been traditionally viewed in the light of various contributors to development of glomerulosclerosis and tubulointerstitial scarring culminating in renal fibrosis Indeed this dogma prevailed for decades underscoring experimental attempts to halt fibrotic processes Breakthrough investigations of the past few years on stem progenitor cell involvement in organ regeneration caused a conceptual shift in tackling the mechanisms of nephrosclerosis It has become clear that the rate of progression of chronic kidney disease is the net sum of the opposing trends degenerative fibrotic processes and regenerative repair mechanisms The latter part of this equation has been by and large ignored for years and only recently attracted investigative

attention This book revisits the problem of kidney disease by focusing on regenerative mechanisms in renal repair and on the ways these regenerative processes can become subverted by an intrinsic disease process eventuating in its progression Cutting edge investigations are summarized by the most experienced international team of experts Presents a comprehensive translational source for all aspects of renal stem cells tissue regeneration and stem cell therapies for renal diseases in one reference work This will ultimately result in time savings for academic medical and pharma researchers Experts in the renal stem cell system in kidney repair and regeneration take readers from the bench research to new therapeutic approaches providing a common language for nephrology researchers fellows and other stem cell researchers This enables the discussion of development of stem cells and their use in the repair and regeneration of the kidney
