Mainstreams of Biology Gairdner Bostwick Moment, Helen Margaret Habermann, 1977 **Mainstreams of Biology** Gairdner B. Moment, Helen Haberman, 1977-02-01 *The American Biology Teacher*, 1938 Includes section Books *Biology pamphlets. supplement*, 1929 **Biology Pamphlets**, 1901 **Biocivilisations** Predrag Slijepcevic, 2023-05-18 Biocivilisations is a fascinating original and important exploration into how complex civilisations existed on Earth long before humans What is life This is arguably the most important question in all of science Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Everything can be sequenced and explained But in a world as rich and complex as this one can such an assertion really be true A growing army of scientists philosophers and artists do not share this mechanistic vision for the science of life The gene metaphor is not only too simplistic but also misleading If there is a way to reduce life to a single principle how does that principle acknowledge the creativity of life that turns both genetic and information determinism on their heads Biocivilisations is a groundbreaking book exploring the mysteries of life and its deep uncertainty Dr Predrag Slijepcevi turns anthropocentric scientific thinking on its head showing how the humble bacteria created the equivalent of cities and connected them with information highways bringing our planet to life three thousand million years ago He explains how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but also demonstrate elements of complex civilisation communication agriculture science art medicine and more that we associate with human achievement More than 99.99 percent of life on Earth has existed without humanity and life will continue without humans long into the future Biocivilisations is an important rethinking of the current scientific paradigm It challenges us to reconsider the limited scope and time window of our current scientific revolution and to fundamentally reimagine what we call life on Earth Life and Process Spyridon A. Koutroufinis, 2014-05-21 Alfred North Whitehead is arguably the most original 20th century philosopher of nature and metaphysics In recent decades a number of physicists have produced ground breaking new theories in fundamental physics influenced by his process philosophy In contrast few biologists are even aware that Whitehead's radical rethinking of the Cartesian assumptions implicit in 19th century sciences might be relevant to their enterprise This book seeks to fill this gap by exploring how Whitehead's process ontology might provide a new philosophical foundation for the biosciences of the 21st century The central premise shared by all of the volume's authors is the idea that all living processes are irreducible processes Each chapter focuses on assumptions implicit in some of the core concepts of biology such as organism evolution information and teleology that play crucial explanatory roles in the biosciences but as metaphysical concepts fall outside its purview The authors each identify important shortcomings implicit in contemporary biological paradigms and show how an approach grounded in a process oriented metaphysics can avoid them **Contributions to Biology from the Hopkins Seaside Laboratory** Hopkins Marine Station, 1896 **Contributions to Biology** Hopkins
