Old Wine New Flasks Reflections On Science And Jewish Tradition:

Old Wine, New Flasks Roald Hoffmann, Shira Leibowitz Schmidt, 1997 *Old Wine New Flasks* is a unique and provocative look at how science and religion too often considered at odds with one another are actually parallel ways of trying to make sense of the same material world each a voice intertwining with the other to help shape true human understanding With great humor and wit the authors one a Nobel laureate and the other an Israeli American writer and student of religion show how daily experience and seemingly innocuous questions such as What is this mixture How do I tell right from left and How can one make the bitter sweet can lead to deeper philosophical issues concerning religion art and science *Old Wine New Flasks* discusses how authority is conferred and contested what it means to be impure whether humans have a right to dominate the environment and the difference between the natural and the unnatural Exploring these and other topics the authors reveal how science and Jewish religious tradition although different in many ways nevertheless share the conviction that the world is a very real place that the actions of beings matter and that there is an underlying order to the universe

Old Wine Roald Hoffmann, 1997 Jews and Sciences in German Contexts Ulrich Charpa, Ute Deichmann, 2007 The authors examine the relationship between the cultural religious and social situation of German Jews on the one hand and their scientific activities on the other They discuss the sensitive question of the specificity of the approaches of Jewish scientists and draw attention to the debate concerning the relationship between Judaism and academic research ranging from the early 19th century theorizing on science and Judaism to 20th century issues e g the controversies on Jewish physics mathematics etc in the 1920s and 30s Contributors Ute Deichmann Anthony S Travis Moritz Epple Raphael Falk Ulrich Charpa Nurit Kirsch Yael Hashiloni Dolev Aharon Loewenstein Ruth Sime Simone Wenkel The Jews and Science Isaac Benguigui, 2021-11-16 One of the most remarkable things about the Jewish people over the last several thousand years has been their creativity in many fields especially in science They have also been impressive in their participation in questioning values dismantling dogmas and the disruption of hidden forces We must underscore the fact that the contribution of Jews to science was out of proportion to the percentage of the population that they represent In illustrating the lives and work of these 33 Nobel Prize winners in physics the author analyzes the factors which favored these prodigious breakthroughs by Jewish scholars In the first part of the book the author shows us with great erudition that the quest and great respect for knowledge have always marked the Jewish communities The second part shows us an impressive fresco of contemporary physics where in one Nobel Prize biography after another with lively and easy to read texts we follow the development of a beautiful epic through the entire twentieth century from the Foreword by Maurice Jacob CERN Rain and Resurrection How the Talmud and Science Read the World Irun Cohen, 2010-02-12 This book presents a set of essays interpreting excerpts from the Talmud that illustrate values essential to Western science It includes another set of essays interpreting the function of interpretation in the method of science to associate Talmudic and post modern concepts **Homenatge professor Josep**

The Jewish Nobel Prize in Chemistry Isaac Benguigui, 2021-10-18 One of the outstanding and remarkable traits of Jews throughout their history several thousand years old has been their creativity in all fields especially in science They have participated in an impressive way in the questioning of values the dismantling of dogmas and the irruption of hidden forces It can be stressed from the outset that the contributions of the Jews to science was out of proportion to the percentage of the population they represent This remains true for the chemistry of the twentieth century Through the life and work of twenty three Nobel Prize winners in chemistry the author gives us a fascinating story of these men often exiles and of modest origins whose science was their vocation and the sharing of knowledge their creed

century debates in science and religion Of interest to students and scholars from a wide range of disciplines this authoritative handbook draws on the very best of contemporary scholarship to present a critical overview of the subject area Thirty eight new essays trace the transformations of natural theology in different historical and religious contexts the place of natural theology in different philosophical traditions and diverse scientific disciplines and the various cultural and aesthetic approaches to natural theology to reveal a rich seam of multi faceted theological reflection rooted in human nature and the environments within which we find ourselves

Jewish Blues Gadi Sagiv,2023-02-14 Jewish Blues presents a broad cultural social and intellectual history of the color blue in Jewish life between the sixteenth and twenty first centuries Bridging diverse domains such as religious law mysticism eschatology as well as clothing and literature this book contends that by way of a protracted process the color blue has constituted a means through which Jews have understood themselves In ancient Jewish texts the term for blue tekhelet denotes a dye that serves Jewish ritual purposes Since medieval times however Jews gradually ceased to use tekhelet in their ritual life In the nineteenth century however interest in restoring ancient dyes increased among European scholars In the Jewish case rabbis and scientists attempted to reproduce the ancient tekhelet dye The resulting dyes were gradually accepted in the ritual life of many Orthodox Jews In addition to being a dye playing a role in Jewish ritual blue features prominently in the Jewish mystical tradition in Jewish magic and popular custom and in Jewish eschatology Blue is also representative of the Zionist movement and it is the only chromatic color in the national flag of the State of Israel Through the study of the changing roles and meanings attributed to the color blue in Judaism Jewish Blues sheds new light on the power of a visual symbol in shaping the imagination of Jews throughout history The use of the color blue continues to reflect pressing issues for Jews in our present era as it has become a symbol of Jewish modernity

rise of medieval Judaism in Islamic and Christian lands It also explores the early modern period and the development of Jewry throughout the nineteenth and twentieth centuries Extracts from primary sources are used to enliven the narrative and provide concrete examples of Jewish civilization Judaism introduces texts and commentaries including the Hebrew Bible rabbinic texts mystical literature Jewish philosophy and Jewish theology provides the skills necessary to understand these step by step explains how to interpret the major events in nearly 4 000 years of Jewish history supports study with discussion questions on the central historical and religious issues includes key reading for each chapter and an extensive bibliography illustrates the development of Judaism its concepts and observances with nearly 200 maps and photographs A companion website links each chapter to other online resources and gives guidance on activities and support for teachers *The Readers Guide to Judaism and Jewish Studies* Sarah Imhoff, 2013 *Index to Jewish Periodicals*, 1998 An author and subject index to selected and American Anglo Jewish journals of general and scholarly interests *Creating a Judaism Without Religion* Daniel S. Breslauer, 2001-09 This book examines how some modern and contemporary Jewish thinkers and writers have imagined a Judaism without the boundaries and restrictions that go by the name of religion The book offers scholarly insights into some Jewish thinkers notably Martin Buber and Eugene Borowitz some Jewish writers in particular the poet Hayyim Nahman Bialik and the Yiddish author I L Peretz The study also introduces more contemporary thinkers and writers such as the postmodernist Jacques Derrida the contemporary Israeli novelist David Grossman and the young Israeli poet Ilan Sheinfeld While of scholarly interest the ten chapter work has more general appeal as a way of conceiving Jewish living outside the restrictions of religion One third of the book suggests a way of looking at God and theology as part of the process of living rather than as fixed realities Another third explores how Jewish culture can be liberated from the restrictions of nationalism and parochialism The final third focuses on a postmodern ethics of the self that emerges from face to face meetings with others The author contends that the future Judaism has created will be pluralistic diverse and oriented toward the future **The Artificial and the Natural** Bernadette Bensaude-Vincent, William R. Newman, 2007 These essays written by specialists of different periods and various disciplines reveal that the division between nature and art has been continually challenged and reassessed in Western thought Nature and art the essays suggest are mutually constructed defining and redefining themselves *The Coming of Materials Science* R.W. Cahn, 2001-03-16 The Coming of Materials Science both covers the discipline of materials science and draws an impressionistic map of the present state of the subject The first chapter examines the emergence of the materials science concept in both academe and industry The second and third chapters delve back into the prehistory of materials science examining the growth of such concepts as atoms crystals and thermodynamics and also examine the evolution of a number of neighbouring disciplines to see what helpful parallels might emerge The book contains numerous literature references Many refer to the earliest key papers and books while others are to sources often books offering a view of the present state of a topic Early references are to the past but as the book

continues it brings the reader up to date with more recent sources The author Professor Robert Cahn FRS has striven to be critical about the history of the discipline of materials science and to draw general conclusions about scientific practice from what he has discovered about the evolution of materials science Further issues that the book highlights include What is a scientific discipline How do disciplines merge and differentiate Can a discipline also be interdisciplinary Is materials science a real discipline A large range of themes is presented in the book and readers are invited to interact with the author if they reach alternative conclusions This book is not just for reading and reference but exists to stimulate thought and provoke discussion as well

The Road to Stockholm István Hargittai, 2002 The Nobel Prize is by far the highest recognition a scientist may receive and the only one with which the general public is familiar Its prestige has reached improbable heights At the same time a lot of myth surrounds the Nobel Prize and this is compounded by the fact that people tend to view scientists with some bewilderment This book introduces the process of selection of the laureates discusses the ingredients for scientific discovery and for getting recognition It reviews the decisive moments of scientific careers en route to the Nobel Prize points to characteristic features of the laureates the importance of mentors and venues in scientific careers and other components of success It also covers some discoverers and discoveries for whom and for which the Nobel Prize never materialized Whereas there is no general recipe for receiving the Nobel Prize there are common features of successful scientific careers The book reveals some information about the scientists lives and careers that may guide other scientists in increasing their chances of becoming more effective and better recognized players although it is not expected to help anyone to receive the Nobel Prize For the general reader The Road to Stockholm reveals the human face of scientists and the human side of their endeavours The Nobel Prize has served as inspiration for scientists and the general public for a hundred years this book discusses its problems and celebrates its triumphs

Martin Buber's Myth of Zion S. Daniel Breslauer, 2019-03-14 The book provides an insightful study of the Jewish theologian Martin Buber and combines a review of the unconventional Zionism he proposed with a sensitivity to myth as the basis of an inclusive civil religion The multifaceted nature of this work examines Buber's embrace of myth and his application of myth to both biblical studies and political theory It pays special attention to the way Buber's thinking about Zion applied to religious ethical issues such as ecology education ritual and as a continuing theme throughout the book to the conflict between those Buber called Jews and Arabs in the land of Palestine
