On Almost Any Wind Susan Schlee, 1978 **Oceanography: The Past** M. Sears, D. Merriman, 2012-12-06 This volume Oceanography The Past is the Proceedings of the Third International Congress on the History of Oceanography organized under the auspices of the Woods Hole Oceanographic Institution at Woods Hole Massachusetts USA September 22-26 1980 The Congress is a part of the year long celebration of the Fiftieth Anniversary of the founding of the Woods Hole Oceanographic Institution It will be followed by an Assembly September 29-October 2 in which invited speakers will address the question Will we use the oceans wisely the next 50 years in oceanography The papers from the Assembly will also be published by Springer Verlag as Oceanography The Present and Future a companion volume to this book The First International Congress on the History of Oceanography was held at the Musée Océanographique in Monaco December 12-17 1966 It coincided with the centennial of the beginning of the distinguished career of Prince Albert I as a student and patron of oceanography for it was in 1866 that he first went to sea on the armored frigate Tetuan of the Royal Spanish Navy The results of this Congress were published as 57 papers in the Bulletin de l'Institut Océanographique special no 2 vols 1-3 pp XLII 807 1968 **Oceanographic History** Keith Rodney Benson, Philip F. Rehbock, 2002 From a study of knowledge of the sea among indigenous cultures in the South Seas to inquiries into the subject of sea monsters from studies of Pacific currents to descriptions of ocean going research vessels the sixty three essays presented here reflect the scientific complexity and richness of social relationships that characterize oceanographic history Based on papers presented at the Fifth International Congress on the History of Oceanography held at the Scripps Institution of Oceanography the first ICHO meeting following the cessation of the Cold War the volume features an unusual breadth of contributions Oceanography itself involves the full spectrum of physical biological and earth sciences in their formal empirical and applied manifestations The contributors to Oceanographic History The Pacific and Beyond undertake the interdisciplinary task of telling the story of oceanography's past drawing on diverse methodologies Their essays explore the concepts techniques and technologies of oceanography as well as the social economic and institutional determinants of oceanographic history Although focused on the Pacific the geographic range of subjects is global and includes Micronesia East Africa and Antarctica the bathymetric range comprises inshore fisheries coral reefs and the azoic zone The seventy one contributors represent every continent of the globe except Antarctica bringing together material on the history of oceanography never before published *Oceanographers and the Cold War* Jacob Darwin Hamblin, 2011-07-01 A political history of twentieth century oceanography Oceanographers and the Cold War is about patronage politics and the community of scientists It is the first book to examine the study of the oceans during the Cold War era and explore the international focus of American oceanographers taking into account the roles of the US Navy US foreign policy and scientists throughout the world Jacob Darwin Hamblin demonstrates that to understand the history of American oceanography one must consider its role in both conflict and cooperation with other nations

Paradoxically American oceanography after World War II was enmeshed in the military industrial complex while characterized by close international cooperation The military dimension of marine science with its involvement in submarine acoustics fleet operations and sea launched nuclear missiles coexisted with data exchange programs with the Soviet Union and global operations in seas without borders From an uneasy cooperation with the Soviet bloc in the International Geophysical Year of 1957 58 to the NATO Science Committee in the late 1960s which excluded the Soviet Union to the US Marine Sciences Council which served as an important national link between scientists and the government Oceanographers and the Cold War reveals the military and foreign policy goals served by US government involvement in cooperative activities between scientists such as joint cruises and expeditions It demonstrates as well the extent to which oceanographers used international cooperation as a vehicle to pursue patronage from military government and commercial sponsors during the Cold War as they sought support for their work by creating disciples of marine science wherever they could A political history of twentieth century oceanography

Scientists and the Sea, 1650-1900 Margaret Deacon, 2018-04-17 Scientists and the Sea is a history of how the scientific study of the sea has developed over a period of nearly 2500 years Beginning with the speculations of Greek philosophers it carries the story forward showing how curiosity about the ocean appeared in many different forms and locations before in the late 19th century the first deep sea researches heralded the foundation of the science known today as oceanography Originally published in 1971 this book has never been superseded as the most comprehensive and wide ranging treatment of the emergence of marine science within the western scientific tradition After three introductory chapters dealing with knowledge up to the Renaissance the main part of the work shows how pioneers of scientific observation at sea during the 17th and 18th centuries made notable discoveries but that it was not until the middle of the 19th century when aided by the advance of technology scientists were able to undertake the first explorations of the ocean depths This second edition contains a new introduction and bibliography

Science in the Early Twentieth Century Jacob Darwin Hamblin, 2005-03-08 The first A Z resource on the history of science from 1900 to 1950 examining the dynamic between science and the social political and cultural forces of the era Though many books have highlighted the great scientific discoveries of the early 1900s few have tackled the wider context in which these milestones were achieved Science in the Early Twentieth Century covers everything from quantum physics to penicillin and more including all the major scientific developments of the period detailing not only the scientists and their work but also the social and political forces that dominated the scientific agenda Over 200 A Z entries chronicle the landmark scientific discoveries and personalities of the period including such scientific giants as Albert Einstein and Marie Curie Placing science firmly within its cultural context this thoroughly researched accessible resource takes a uniquely interdisciplinary approach making it an invaluable text for scientists educators students and the general reader

Mills, 2012-01-01 With a foreword by John Cullen and a new introduction by the author **Oceanic Whitecaps** E.C. Monahan, Gearóid Mac Niocaill, 2012-12-06 **Exploration and Science** Michael Sean Reidy, Gary Kroll, Erik M. Conway, 2006-12-27 This comprehensive volume explores the intricate mutually dependent relationship between science and exploration how each has repeatedly built on the discoveries of the other and in the process opened new frontiers A simple question Which came first advances in navigation or successful voyages of discovery A complicated answer Both and neither For more than four centuries scientists and explorers have worked together sometimes intentionally and sometimes not in an ongoing symbiotic partnership When early explorers

brought back exotic flora and fauna from newly discovered lands scientists were able to challenge ancient authorities for the first time As a result scientists not only invented new navigational tools to encourage exploration but also created a new approach to studying nature in which observations were more important than reason and authority The story of the relationship between science and exploration analyzed here for the first time is nothing less than the history of modern science and the expanding human universe

Knowing Global Environments Jeremy Vetter,2011 Knowing Global Environments brings together nine leading scholars whose work spans a variety of environmental and field sciences including archaeology agriculture botany climatology ecology evolutionary biology oceanography ornithology and tichology Collectively their essays explore the history of the field sciences through the lens of place practice and the production of scientific knowledge with a wide ranging perspective extending outwards from the local to regional national imperial and global scales The book also shows what the history of the field sciences can contribute to environmental history especially how knowledge in the field sciences has intersected with changing environments and addresses key present day problems related to sustainability such as global climate biodiversity oceans and more Contributors to Knowing Global Environments reveal how the field sciences have interacted with practical economic activities such as forestry agriculture and tourism as well as how the public has been involved in the field sciences as field assistants students and local collaborators

The Fluid Envelope of our Planet Eric L. Mills,2011-04-23 Oceans have had a mysterious allure for centuries inspiring fears myths and poetic imaginations By the early twentieth century however scientists began to see oceans as physical phenomena that could be understood through mathematical geophysics The Fluid Envelope of Our Planet explores the scientific developments from the early middle ages to the twentieth century that illuminated the once murky depths of oceanography Tracing the transition from descriptive to mathematical analyses of the oceans Eric Mills examines sailors and explorers observations of the oceans the influence of Scandinavian techniques on German speaking geographers and the eventual development of shared quantitative practices and ideas A detailed and beautifully written account of the history of oceanography The Fluid Envelope of Our Planet is also an engaging account of the emergence of a scientific discipline

Bicho,Jonathan A. Haws,Loren G. Davis,2011-05-19 Human settlement has often centered around coastal areas and waterways Until recently however archaeologists believed that marine economies did not develop until the end of the Pleistocene when the archaeological record begins to have evidence of marine life as part of the human diet This has long been interpreted as a postglacial adaptation due to the rise in sea level and subsequent decrease in terrestrial resources Coastal resources particularly mollusks were viewed as fallback resources which people resorted to only when terrestrial resources were scarce included only as part of a more complex diet Recent research has significantly altered this understanding known as the Broad Spectrum Revolution BSR model The contributions to this volume revise the BSR model with evidence that coastal resources were an important part of human economies and subsistence much earlier than previously thought and even the main focus of diets for some Pleistocene and early Holocene hunter gatherer societies With evidence from North and South America Europe Africa Asia and Australia this volume comprehensively lends a new understanding to coastal settlement from the Middle Paleolithic to the Middle Holocene *Library Journal* ,1978
