On Becoming A Scientist Video:

Being a Scientist Michael H. Schmidt, 2019-11-20 *Being a Scientist* is a comprehensive introduction to the many aspects of scientific life beyond the classroom and laboratory. Written with undergraduate science majors in mind, the book covers ethics, the philosophical bases of scientific methods, library research, reading, peer review, creativity, proposal and paper writing, and oral and poster presentations. In contrast to other texts in the field which often take a simple prescriptive approach to these topics, *Being a Scientist* connects them to the historical and philosophical roots of modern science as well as the common experiences of all people. Written in a conversational style, the book makes use of metaphor, historical anecdote, and hypothetical research about everyday household questions. This approach helps undergraduates learn basic research skills without being too intimidated by the advanced concepts, vocabulary, and methods which are encountered in looking at the current scientific literature. *Being a Scientist* is a textbook for a semester-long course devoted to teaching research and communication skills to undergraduate science majors, but it can be adapted for use in summer research experiences, capstone research courses, and other courses throughout the undergraduate curriculum. **On Being a Scientist**

Institute of Medicine, National Academy of Engineering, National Academy of Sciences, Committee on Science, Engineering, and Public Policy, 2009-04-24 The scientific research enterprise is built on a foundation of trust. Scientists trust that the results reported by others are valid. Society trusts that the results of research reflect an honest attempt by scientists to describe the world accurately and without bias. But this trust will endure only if the scientific community devotes itself to exemplifying and transmitting the values associated with ethical scientific conduct. *On Being a Scientist* was designed to supplement the informal lessons in ethics provided by research supervisors and mentors. The book describes the ethical foundations of scientific practices and some of the personal and professional issues that researchers encounter in their work. It applies to all forms of research, whether in academic, industrial, or governmental settings, and to all scientific disciplines. This third edition of *On Being a Scientist* reflects developments since the publication of the original edition in 1989 and a second edition in 1995. A continuing feature of this edition is the inclusion of a number of hypothetical scenarios offering guidance in thinking about and discussing these scenarios. *On Being a Scientist* is aimed primarily at graduate students and beginning researchers, but its lessons apply to all scientists at all stages of their scientific careers. *UCSF News* University of California, San Francisco, 1995-05 *Youths' Cogenerative Dialogues with Scientists* Pei-Ling Hsu, 2020-07-27 Working with scientists has been suggested as a powerful activity that can stimulate students' interest and career aspirations in science. However, how to address challenges of power over issues and communication barriers in youth-scientist partnerships. In *Youths' Cogenerative Dialogues with Scientists*, the author describes a pioneering study to improve internship communications between youth and scientists through cogenerative dialogues. The findings show that cogenerative dialogues can help youth and scientists recognize, express, and manage their challenges and emotions as they arise in their internships.

As a result cogenerative dialogues help youth and scientists work productively as a team and enhance their social bonding. Suggestions are also provided for science educators to design more innovative and effective projects for future youth scientist partnerships.

Godism: A Religion for Scientists Lucifer White, 2018-04-29
This book stems from the fact that human people are becoming very god-like due to science and technology. It is a book that develops scientific minds. And it provides a good perspective on where we came from and where we are going. It suggests science is capable of anything and should be used to reduce or even eliminate human suffering. This book is how to be a god when the time comes that we can truly define ourselves as such. It provides good ideas for a scientist to use in creating new things. And this is the first in its series; leaves out the religious aspects of Godism which will instead be presented in later books. This first book isn't the religion of Godism but rather the knowledge of it.

Being and Becoming Scientists Today Susan A. Kirch, Michele Amoroso, 2016-02-10
Can I contribute to science? Do I like to work on the problems of science? How do scientists know what they know? Would I like to be a scientist? These are questions that interest new science students. The authors provide teachers with an approach to foster and answer these questions by concentrating on learners and learning. They argue that students are typically taught from a disciplinary perspective of science. Using this lens, students are viewed as people who need to learn a particular canon of information, methods, and ways of knowing about the world, a perspective that may be useful for practicing scientists but not ideal for young learners. In this disciplinary approach to science education, there is little room for development as a scientist. In contrast, the approach championed by Kirch and Amoroso places learner questions about the world at the forefront of teaching and learning and treats science as a system of human activity. The historical explorations, theoretical insights, and practical advice presented here are appropriate for all ages and educational settings. In *Being and Becoming Scientists Today*, the authors provide new tools for thinking about science, ideas for how to reveal the multiple stories of knowledge production to learners, and approaches to teaching science as a collective process rather than a series of contributions made by famous individuals. In these ways, the authors promote the idea that all science learners contribute to the science in our lives.
