## **On Calculating The Factor Of Chance In Language Comparison:**

**On Calculating the Factor of Chance in Language Comparison** Donald Ringe, 2007-12 While all human languages are likely to be genetically related the remoter relationships cannot be demonstrated by reliable linguistic methods because the languages in question have diverged too much Any demonstration of a relationship between languages depends on finding words only elementary probability theory is needed to address the problem The author discusses strictly limited tightly controlled types of similarity between words because those are easiest to understand then he discusses more complex cases Illustrations

*On Calculating the Factor of Chance in Language Comparison* Donald A. Ringe, 1992 While all human languages are likely to be genetically related the remoter relationships cannot be demonstrated by reliable linguistic methods because the languages in question have diverged too much Any demonstration of a relationship between languages depends on finding words only elementary probability theory is needed to address the problem The author discusses strictly limited tightly controlled types of similarity between words because those are easiest to understand then he discusses more complex cases Illustrations

**Linguistics Today □ Facing a Greater Challenge** Piet van Sterkenburg, 2004-10-13 Every five years the Permanent International Committee of Linguists CIPL organises a world congress for linguists And every five years the Committee faces the challenge of presenting a programme at the highest possible level The CIPL Executive Committee decided for the Congress planned for 2003 in Prague to focus on four major topics which play an important role in today's linguistic debate 1 Typology 2 Endangered Languages 3 Methodology and Linguistics including fieldwork and 4 Language and the mind Leading experts have introduced the four themes in their plenary lectures in the course of the congress which served as a basis for the articles presented in the current volume This book should be a welcome tool for all linguists wishing to find their way quickly in current developments A CD Rom containing the full proceedings of the Prague Congress is included

**The Indo-European Controversy** Asya Pereltsvaig, Martin W. Lewis, 2015-04-30 Over the past decade a group of prolific and innovative evolutionary biologists has sought to reinvent historical linguistics through the use of phylogenetic and phylogeographical analysis treating cognates like genes and conceptualizing the spread of languages in terms of the diffusion of viruses Using these techniques researchers claim to have located the origin of the Indo European language family in Neolithic Anatolia challenging the near consensus view that it emerged in the grasslands north of the Black Sea thousands of years later But despite its widespread celebration in the global media this new approach fails to withstand scrutiny As languages do not evolve like biological species and do not spread like viruses the model produces incoherent results contradicted by the empirical record at every turn This book asserts that the origin and spread of languages must be examined primarily through the time tested techniques of linguistic analysis rather than those of evolutionary biology

**The Oxford Handbook of Historical Phonology** Patrick Honeybone, Joe Salmons, 2015 This critical overview examines every aspect of the field including its history key current research questions and methods

theoretical perspectives and sociolinguistic factors The authors represent leading proponents of every theoretical perspective The book is a valuable resource for phonologists and a stimulating guide for their students      **Genetic Linguistics** Joseph Greenberg,2005-03-17 This book collects Joseph Greenberg s most important writings on the genetic classification of the world s languages William Croft sets the work in context and considers its impact and the bitter controversy it excited

**Historical Linguistics and the Comparative Study of African Languages** Gerrit Jan Dimmendaal,2011 This advanced historical linguistics course book deals with the historical and comparative study of African languages The first part functions as an elementary introduction to the comparative method involving the establishment of lexical and grammatical cognates the reconstruction of their historical development techniques for the subclassification of related languages and the use of language internal evidence more specifically the application of internal reconstruction Part II addresses language contact phenomena and the status of language in a wider cultural historical and ecological context Part III deals with the relationship between comparative linguistics and other disciplines In this rich course book the author presents valuable views on a number of issues in the comparative study of African languages more specifically concerning genetic diversity on the African continent the status of pidginised and creolised languages language mixing and grammaticalisation

**Proto-Australian** Mark Harvey,Robert Mailhammer,2024-08-19 This book is the first full evaluation of the Proto Australian hypothesis which proposes that most Australian languages have a common ancestor Proto Australian PA Using the standard methodologies of historical linguistics the authors show that nearly all Australian languages descend from PA Given that PA was a single language it was spoken only in a small area of Australia Its descendants have spread across the continent Current theories of language spread do not offer clear motivations for large scale spread in hunter gatherer economies This raises significant questions for analyses of Australian prehistory and archaeology specifically and more widely for general theories of hunter gatherer prehistory and language spread

**Archaeology and Language I** Roger Blench,Matthew Spriggs,2003-09-02 Archaeology and Language I represents groundbreaking work in synthesizing two disciplines that are now seen as interlinked linguistics and archaeology This volume is the first of a three part survey of innovative results emerging from their combination Archaeology and historical linguistics have largely pursued separate tracks until recently although their goals can be very similar While there is a new awareness that these disciplines can be used to complement one another both rigorous methodological awareness and detailed case studies are still lacking in literature Archaeology and Language I aims to fill this lacuna Exploring a wide range of techniques developed by specialists in each discipline this first volume deals with broad theoretical and methodological issues and provides an indispensable background to the detail of the studies presented in volumes II and III This collection deals with the controversial question of the origin of language the validity of deep level reconstruction the sociolinguistic modelling of prehistory and the use and value of oral tradition      *The Syllable in Speech Production* Barbara L. Davis,Krisztina Zajdo,2010-10-18 As a testament to

the scope of Peter MacNeilage's scholarly work across his 40 year career contributions to this tribute volume represent a broad spectrum of the seminal issues addressed by phonetic and evolutionary science over a number of years Approaches to the problems raised by attempting to understand these fundamental topics are illustrated in the broad diversity of paradigms represented in the volume This diversity in itself is a tribute to the breadth of scholarly questions pursued by MacNeilage across his career Chapters are arranged around five thematic areas Two themes Evolutionary Perspectives on Speech Production and Acquisition of Speech reflect the major thrust of Peter's scholarly career over the past 25 years The other themes are reflective of the broad implications of MacNeilage's work for scholars in disparate scientific domains One of the strengths of this volume is the unitary focus of contributions by scientists from diverse scientific backgrounds in considering the applicability of the Frame Content Theory within their own scholarly perspectives Thematic strands in the volume include Evolutionary Perspectives on Speech Production Neurobiological Aspects of Speech Perception Action Relationships Acquisition of Speech Production Skill Modeling and Movement Alternative Perspectives on the Syllable *The Comparative Method Reviewed* Mark Durie, Malcolm Ross, 1996-05-16 Historical reconstruction of languages relies on the comparative method which itself depends on the notion of the regularity of change The regularity of sound change is the famous Neogrammarian Hypothesis sound change takes place according to laws that admit no exception The comparative method however is not restricted to the consideration of sound change and neither is the assumption of regularity Syntactic morphological and semantic change are all amenable in varying degrees to comparative reconstruction and each type of change is constrained in ways that enable the researcher to distinguish between regular and more irregular changes This volume draws together studies by scholars engaged in historical reconstruction all focussing on the subject of regularity and irregularity in the comparative method A wide range of languages are represented including Chinese Germanic and Austronesian *Evolutionary Linguistics* April McMahon, Robert McMahon, 2012-10-11 How did the biological brain and behavioural structures underlying human language evolve This is an introduction to the interdisciplinary debates
