T. Buckland,D. R Anderson,K. P. Burnham,J. L. Laake,D. L. Borchers,L. Thomas,2004-08-19 This advanced text focuses on the uses of distance sampling to estimate the density and abundance of biological populations It addresses new methodologies new technologies and recent developments in statistical theory and is the follow up companion to Introduction to Distance Sampling OUP 2001 In this text a general theoretical basis is established for methods of estimating animal abundance from sightings surveys and a wide range of approaches to analysis of sightings data is explored These approaches include modelling animal detectability as a function of covariates where the effects of habitat observer weather etc on detectability can be assessed estimating animal density as a function of location allowing for example animal density to be related to habitat and other locational covariates estimating change over time in populations a necessary aspect of any monitoring programme estimation when detection of animals on the line or at the point is uncertain as often occurs for marine populations or when the survey region has dense cover survey design and automated design algorithms allowing rapid generation of sound survey designs using geographic information systems adaptive distance sampling methods which concentrate survey effort in areas of high animal density passive distance sampling methods which extend the application of distance sampling to species that cannot be readily detected in sightings surveys but can be trapped and testing of methods by simulation so that performance of the approach in varying circumstances can be assessed Authored by a leading team this text is aimed at professionals in government and environment agencies statisticians biologists wildlife managers conservation biologists and ecologists as well as graduate students studying the density and abundance of biological populations

Bower,1980 This brief edition contains two major parts The first is the historical analysis of associationism and its countertraditions which still provides the framework used to relate current research to an important intellectual tradition The second part of the book reproduces the major components of the HAM theory In our view the major contribution of that theory was the propositional network analyses of memory and the placement of those representational assumptions into an information processing framework This book is smaller than the previous book on HAM thanks to a re evaluation of certain sections which have been deleted some due to out of date information some because the analyses presented have been replaced by better ones This book makes the more important points of the original HAM book available at a more economical price from the preface **From Is to Ought: The Place of Normative Models in the Study of Human Thought** Shira Elqayam,David E. Over,2016-08-12 In the study of human thinking two main research questions can be asked Descriptive Q What is human thinking like Normative Q What ought human thinking be like For decades these two questions have dominated the field and the relationship between them generated many a controversy Empirical normativist approaches regard the answers to these questions as positively correlated in essence human thinking is what it ought to be although what counts as the ought standard is moot In contemporary theories of reasoning and decision making this is often associated with a Panglossian framework an adaptationist approach which regards human thinking as a priori rational In contrast prescriptive normativism sees the answers to these two questions as negatively correlated Normative models are still relevant to human thought but human behaviour deviates from them quite markedly with the invited conclusion that humans are often irrational Prescriptive normativism often results in a Meliorist agenda which sees rationality as amenable to education Both empirical and prescriptive normativism can be contrasted with a descriptivist framework for psychology of human thinking Following Hume

s strict divide between the is and the ought descriptivism regards the descriptive and normative research questions as uncorrelated or dissociated with only the former question suitable for psychological study of human behaviour This basic division carries over to the relation between normative ought rationality based on conforming to normative standards and instrumental is rationality based on achieving one s goals Descriptivist approaches regard the two as dissociated whereas normativist approaches tend to see them as closely linked with normative arguments defining and justifying instrumental rationality This research topic brings together diverse contributions to the continuing debate Featuring contributions from leading researchers in the field the e book covers a wide range of subjects arranged by six sections The standard picture Normativist perspectives In defence of soft normativism Exploring normative models Descriptivist perspectives Evolutionary and ecological accounts Empirical reports With a total of some 24 articles from 55 authors this comprehensive treatment includes theoretical analyses meta theoretical critiques commentaries and a range of empirical reports The contents of the Research Topic should appeal to psychologists linguists philosophers and cognitive scientists with research interests in a wide range of domains from language through reasoning judgment and decision making and moral judgment to epistemology and theory of mind philosophical logic and meta ethics **Using Eye Movements as an Experimental Probe of Brain Function** R.
