

Computer Systems

As it's the first page I'll start simple. Computer Science is all about computers. What, you already knew that?

A Computer is a Machine that Processes Data

- 1) The purpose of a computer is to take **data**, **process** it, then **output** it.
Computers were created to help process data and complete tasks **more efficiently** than humans.
- 2) A **computer system** consists of **hardware** and **software** that work together to process data/complete tasks.
 - Hardware is the **physical** stuff that makes up your computer system, like the CPU, motherboard, monitor and printer.
 - Software is the **programs** or **applications** that a computer system runs e.g. an operating system, a word processor or video game.
- 3) There are **many types** of computer system. These range from small devices like calculators and watches, up to large **supercomputers** used by banks or for scientific applications. Computers may be **general purpose** (designed to perform **many tasks**, e.g. PCs and tablets) or **dedicated systems** (designed for **one particular** function, e.g. controlling traffic lights or an aeroplane).

External pieces of hardware like the keyboard, mouse and printer are called **peripherals**.

Embedded Systems are Computers inside a Larger System

- 1) **Embedded systems** are computers **built into other devices**, like dishwashers, microwaves and TVs. They are usually dedicated systems.
- 2) Embedded systems are often used as **control systems** — they **monitor** and **control** machinery in order to achieve a desired result. E.g. In a **dishwasher** the embedded system could control the water pumps and water release mechanisms, manage the various dishwasher cycles and control the thermostat to keep the water at an appropriate temperature.
- 3) As they're **dedicated** to a single task, embedded systems are usually easier to **design**, cheaper to **produce**, and more **efficient** at doing their task than a general purpose computer.

Computers contain Components which Work Together

This section is all about the main hardware components of a computer.
As a warm-up, let's take a look inside a **typical desktop PC**.

If you know your computer, you need not fear defeat...

There's a lot to take in on this first page. You should make sure you're comfortable with the components on this page before going any further, as they'll crop up a lot throughout this section.
