Doroghazi, 2015-03-13 On the Planet of Oria and its nearby neighbors a near utopian society has been developed by the leaders and most intelligent beings on the planets The great Rankin has developed a perpetual energy source by harnessing the power of the binary black hole star through the construction of The Cube An evil force on Oria has recently developed a desire to gain control of the planet through dubious and dangerous acquisition of nuclear weapons recently found on our planet Earth The Committee of Ten comprised of the greatest leaders of Oria has found out about the evil plan that could wipe out billions of innocent people Lyton Rennedee must be stopped Consensus is met to call upon their best and most worthy Major in their Military Hoken Rommeler is truly up to the test **Rogue Alien's Legacy: Science Fiction Romance** Kate Rudolph, Outlaws schemes and love it all comes to a head in the final installment of the science fiction romance Alien Outlaws series Secrets revealed and a crew in danger With two little words all of Xandr's lies and omissions come crashing down and leave his entire crew wondering whether they can ever trust him again Andie's faith is shaken and she wonders if the alien captain in her bed is the man she thought he was or if she has been cozying up to a stranger But she'll need to put those doubts aside if the crew of the Seventh is going to

get out of its biggest mess next Xandr's past has come back to haunt them all and if they don't find a way to work together they'll all end up rotting in an Oscavian prison or worse Rogue Alien's Legacy picks up right where Rogue Alien's Secret left off Check it out for heists adventure a steamy alpha alien a plucky human heroine and a love that will steal your heart You can start the series with the free science fiction romance Escape from Ixilta today This book is great for readers of paranormal romance and sci fi romance who love to read in their free time [Star Ark](#) Rachel Armstrong,2016-11-13 As space ventures have become more numerous leading scientists and theorists have offered ways of building a living habitat in a hostile environment taking an ecosystems view of space colonization The contributors to this volume take a radical multi disciplinary view of the challenge of human space colonization through the ongoing project Persephone This book fundamentally challenges prevalent ideas about sustainability and proposes a new approach to resource austerity and conservation and providing truly sustainable approaches that are life promoting Readers will learn the details of the plans for Persephone a real project that is part of the company Icarus Interstellar's plans for the design and engineering of a living interior on a worldship to be constructed in Earth's orbit within 100 years Although the timeframe itself is only an estimate since it is contingent on many significant developments including funding and technological advances the industry consensus is that within 100 years we will see manned space exploration beyond our solar system This notion is shared by organizations such as the Initiative for Interstellar Studies and the DARPA funded 100 year starship project This book specifically develops the principles for the construction of a living habitat within a worldship a multi generational starship that contains its own world that supports colonists as it travels across great distances between stars at a speed much slower than light Far from being a sterile industrial setup such as the ISS or even being a bucolic suburbia as proposed by Gerard O'Neill in the 1970s this worldship will provide the pre conditions for sustaining life beyond Earth's environment which may also lead to the evolution of non terrestrial ecologies Drawing on the principles of ecopoiesis and insights offered by the Biosphere 2 experiment that demonstrated what we have to learn about ecosystem construction this book proposes first designing the soils of such a space It should then be possible to set up the conditions that a first generation of colonists may experience in leaving our solar system to find new worlds to settle perhaps in spreading life throughout the universe Although the book takes a unique view of ecology and sustainability within the setting of a traveling starship it is equally concerned with the human experience on artificial worlds Chapters come from a range of multi disciplinary thinkers who shed light on the brave new future ahead from different angles [Sad Planets](#) Dominic Pettman,Eugene Thacker,2024-03-28 Everything is sad wrote the Ancient poets But is this sadness merely a human experience projected onto the world or is there a gloom attributable to the world itself Could the universe be forever weeping the tears of things In this series of meditations Dominic Pettman and Eugene Thacker explore some of the key negative affects both eternal and emergent associated with climate change environmental destruction and cosmic solitude In so doing they unearth something so obvious that it has gone largely

unnoticed the question of how we should feel about climate change Between the information gathered by planetary sensors and the simple act of breathing the air new unsettling moods are produced for which we currently lack an adequate language Should we feel grief over the loss of our planet Or is the strange feeling of witnessing mass extinction an indicator that the planet was never ours to begin with Sad Planets explores this relationship between our all too human melancholia and a more impersonal sorrow nestled in the heart of the cosmic elements Spanning a wide range of topics from the history of cosmology to the existential threat of climate change this book is a reckoning with the limits of human existence and comprehension As Pettman and Thacker observe never before have we known so much about the planet and the cosmos and yet never before have we felt so estranged from that same planet to say nothing of the stars beyond
