The next three sections cover common complaints encountered in the hospital, spanning from non-vascular admissions to vascular stroke, neurology topics, and core neurocritical care principles and chief complaints. Neurology at the Bedside Daniel Kondziella, Gunhild Waldemar, 2023-11-14. Neurologists perhaps more so than any other physicians take pride in their bedside skills. Good clinical mentorship is mandatory in order to develop such skills; however, due to an ever-increasing need for more efficient working structures, the time and dedication that mentorship requires may not always be available. *Neurology at the Bedside* was written to fill this gap. *Neurology at the Bedside* addresses neurology residents looking for a personal clinical mentor. It takes them by the hand and guides them through the whole patient encounter, from an efficient neurological history according to neuroanatomical key features and the bedside examination to differential diagnosis, diagnostic procedures, and lastly the treatment. At each step, *Neurology at the Bedside* points out what is essential and what is not. One of the most innovative areas in medicine, neurology is under rapid development with ever-increasing diagnostic and therapeutic opportunities. This exciting progress called for an update of the text. All chapters are thoroughly revised and reflect the essential state of the art knowledge neurologists need to acquire during their training.

Cadogan, Mike Cadogan, Antonio Celenza, 2011 This book provides a structured approach to the initial assessment resuscitation differential diagnosis and short term management of common on call problems It also provides an overall guide to hospital practice and acute clinical skills It is designed to help junior doctors and senior medical students acquire a logical practical and efficient approach which is essential for problem based learning and acute management Clinical problem solving is an essential skill for the doctor on call Traditionally the diagnosis and management of a patient's problems are approached with an ordered structured and sequential system e.g. history taking physical examination and review of available investigations before formulating the provisional and differential diagnoses and the management plan In an emergency doctors proceed concurrently with resuscitation history examination investigation and definitive treatment Stabilisation of the airway breathing circulation and neurological disability must occur in the first few minutes to avoid death and disability A complete history and physical examination can take 60 minutes or more to complete However while on call this is not possible as unnecessary time spent on a patient with a relatively minor complaint may deny adequate treatment time to patients who may require resuscitation This book provides a focused approach to many clinical problems in order to increase efficiency and improve time management *Year Book of Neurology and Neurosurgery* Alejandro A.
