Introduction to Christian Ethics Roger H Crook, 2015-10-02 This book is a college level introductory textbook in Christian ethics It introduces the field of ethics and a variety of approaches to its study The book is written for college students and is designed to help them develop a method of dealing with the thorny moral issues Our Grandchildren Redesigned Michael Bess, 2015-10-13 A panoramic overview of biotechnologies that can endlessly boost human capabilities and the drastic changes these superhuman traits could trigger Biotechnology is moving fast In the coming decades advanced pharmaceuticals bioelectronics and genetic interventions will be used not only to heal the sick but to boost human physical and mental performance to unprecedented levels People will have access to pills that make them stronger and faster informatic devices will interface seamlessly with the human brain and epigenetic modification may allow people to reshape their own physical and mental identities at will Until recently such major technological watersheds like the development of metal tools or the industrialization of manufacturing came about incrementally over centuries or longer People and social systems had time to adapt they gradually developed new values norms and habits to accommodate the transformed material conditions But contemporary society is dangerously unprepared for the dramatic changes it is about to experience down this road on which it is already advancing at an accelerating pace The results will no doubt be mixed People will live longer healthier lives will fine tune their own thought processes and will generate staggeringly complex and subtle forms of knowledge and insight But these technologies also threaten to widen the rift between rich and poor to generate new forms of social and economic division and to force people to engage in constant cycles of upgrades and boosts merely to keep up Individuals who boost their traits beyond a certain threshold may acquire such extreme capabilities that they will no longer be recognized as unambiguously human In this important and timely book prize winning historian Michael Bess provides a clear nontechnical overview of cutting edge biotechnology and paints a vivid portrait of a near future society in which bioenhancement has become a part of everyday life He surveys the ethical questions raised by the enhancement enterprise and explores the space for human agency in dealing with the challenges that these technologies will present Headed your way over the coming decades new biotechnologies that can powerfully alter your body and mind The possibilities are tantalizing Rejuvenation therapies offering much longer lives 160 and even beyond in full vigor and mental acuity Cognitive enhancement through chemical or bioelectronic means the rough equivalent of doubling or tripling IQ scores Epigenetic tools for altering some of your genetically influenced traits at any point in your lifetime body shape athletic ability intelligence personality Bioelectronic devices for modulating your own brain processes including your pleasure centers a potentially non stop high Direct control of machines by thought and perhaps direct communication with other people brain to brain a new dimension of sharing and intimacy But some of the potential consequences are also alarming A growing rift between the biologically enhanced and those who can't afford such modifications A constant cycle of upgrades and boosts as the bar of normal rises ever higher Humans 95 Humans XP Humans 8 The fragmentation of humankind into rival bioenhancement

clusters A gradually blurring boundary between person and product Extreme forms of self modification with some individuals no longer recognized as unambiguously human Science, Theology, and Ethics Ted Peters, 2017-03-02 Science challenges faith to seek fuller understanding and faith challenges science to be socially and ethically responsible This book begins with faith in God the Creator of the world and then expands our understanding of creation in light of Big Bang cosmology and new discoveries in physics Examining the expanding frontier of genetic research Ted Peters draws out implications for theological understandings of human nature and human freedom Issues discussed include methodology in science and theology eschatology in cosmology and theology freedom and responsibility in evolution and theology and genetic determinism genetic engineering and cloning in relation to freedom the commodification of human life and equitable distribution of the fruits of genetic technology The dialogue model of relationship between science and religion proposed in this book provides a common ground for the disparate voices among theologians scientists and world religions This common ground has the potential to breathe new life into current debates about the world in which we live move and have our being Playing God? Ted Peters, 2014-04-04 Since the original publication of *Playing God* in 1996 three developments in genetic technology have moved to the center of the public conversation about the ethics of human bioengineering Cloning the completion of the human genome project and most recently the controversy over stem cell research have all sparked lively debates among religious thinkers and the makers of public policy In this updated edition Ted Peters illuminates the key issues in these debates and continues to make deft connections between our questions about God and our efforts to manage technological innovations with wisdom **The Biotechnology Debate** Bernice Bovenkerk, 2012-01-04 This book grounds deliberative democratic theory in a more refined understanding of deliberative practice in particular when dealing with intractable moral disagreement regarding novel technologies While there is an ongoing vibrant debate about the theoretical merits of deliberative democracy on the one hand and more recently empirical studies of specific deliberative exercises have been carried out these two discussions fail to speak to one another Debates about animal and plant biotechnology are examined as a paradigmatic case for intractable disagreement in today's pluralistic societies This examination reveals that the disagreements in this debate are multi faceted and multi dimensional and can often be traced to fundamental disagreements about values or worldviews One of the acute insights to emerge from this examination is that deliberation can serve different purposes vis vis different types of problem In the case of deeply unstructured problems like the modern biotechnology debate the aim of inclusion is more appropriate than the aim of consensus This book highlights the importance of political culture and broader institutional settings in shaping the capacity and propensity of citizens to engage in deliberation and the degree to which governments are prepared to relinquish authority to deliberative mini publics Robyn Eckersley University of Melbourne Australia *Human Embryonic Stem Cells* Jon Odorico, Roger Pedersen, Su-Chun Zhang, 2004-02-01 Since the first successful isolation and cultivation of human embryonic stem cells at the University of Wisconsin Madison in 1998 there

has been high levels of both interest and controversy in this area of research This book provides a concise overview of an exciting field covering the characteristics of both human embryonic stem cells and pluripotent stem cells from other human cell lineages The following chapters describe state of the art differentiation and characterization of specific ectoderm mesoderm and endoderm derived lineages from human embryonic stem cells emphasizing how these can be used to study human developmental mechanisms A further chapter discusses genetic manipulation of human ES cells The concluding section covers therapeutic applications of human ES cells as well as addressing the ethical and legal issues that this research have raised

Arguments and Analysis in Bioethics, 2010-01-01 Is there any justification for the common practice of allocating expensive medical resources to rescue a few from rare diseases when those resources could be used to treat devastating diseases that affect the many Does the use of Prozac and other anti depressants make us inauthentic beings Is it immoral and irrational to have children What is the force of examples and counterexamples in bioethics What are the relevance of moral intuition and the role of empirical evidence in bioethical argument What notion of function underlies accounts of the distinction between normality and disease and between therapy and enhancement Is there an inherent conflict between research aimed at therapy and research aimed at gaining knowledge such that the very notion of therapeutic research is an oxymoron The twenty one chapters in this volume strive through the use of high quality
