On Dobrushin's Way. From Probability Theory to Statistical Physics Robert A. Minlos,Robert Adol'fovich Minlos,Yu. M. Suhov,2000 Fellow Russian mathematicians discuss and extend the works of Dobrushin 1929 95 who worked in many areas of mathematics but had deepest influence on mathematical physics and was one of the founders of the rigorous study of statistical physics The 15 technical papers are flanked by a short biography and recollections by colleagues and students The topics include the lower spectral branch of the generator of the stochastic dynamics for the classical Heisenberg model non symmetric simple random walks along orbits of ergodic automorphisms the Cramer transform and large deviations on three dimensional Lobachevsky space and dynamics of Ising spin systems at zero temperature No index is provided Annotation copyrighted by Book News Inc Portland OR *On Dobrushin's Way* Robert Adol'fovich Minlos,S. Interdisciplinary Symposium on Complex Systems Ali Sanayei,Ivan Zelinka,Otto E. Rössler,2014-02-15 The book you hold in your hands is the outcome of the ISCS 2013 Interdisciplinary Symposium on Complex Systems held at the historical capital of Bohemia as a continuation of our series of symposia in the science of complex systems Prague one of the most beautiful European cities has its own beautiful genius loci Here a great number of important discoveries were made and many important scientists spent fruitful and creative years to leave unforgettable traces The perhaps most significant period was the time of Rudolf II who was a great supporter of the art and the science and attracted a great number of prominent minds to Prague This trend would continue Tycho Brahe Niels Henrik Abel Johannes Kepler Bernard Bolzano August Cauchy Christian Doppler Ernst Mach Albert Einstein and many others followed developing fundamental mathematical and physical theories or expanding them Thus in the beginning of the 17th century Kepler formulated here the first two of his three laws of planetary motion on the basis of Tycho Brahe s observations In the 19th century nowhere differentiable continuous functions of a fractal character were constructed here by Bolzano along with a treatise on infinite sets titled Paradoxes of Infinity 1851 Weierstrass would later publish a similar function in 1872 In 1842 Doppler as a professor of mathematics at the Technical University of Prague here first lectured about a physical effect to bear his name later And the epoch making physicist Albert Einstein while being a chaired professor of theoretical physics at the German University of Prague arrived at the decisive steps of his later finished theory of general relativity during the years 1911 1912 In Prague also many famous philosophers and writers accomplished their works for instance playwright arel ape coined the word robot in Prague robot comes from the Czech word robota which means forced labor   **In and Out of Equilibrium 3: Celebrating Vladas Sidoravicius** Maria Eulália Vares,Roberto Fernández,Luiz Renato Fontes,Charles M. Newman,2021-03-25 This is a volume in memory of Vladas Sidoravicius who passed away in 2019 Vladas has edited two volumes appeared in this series In and Out of Equilibrium and is now honored by friends and colleagues with research papers reflecting Vladas interests and contributions to probability theory   *Statistical Mechanics of Disordered Systems* Anton Bovier,2006-06-08 Publisher Description   *Lectures on Probability Theory and Statistics* Amir Dembo,Tadahisa Funaki,2005-11-03 This volume contains two of the three lectures that were given at the 33rd Probability Summer School in Saint Flour July 6 23 2003 Amir Dembo s course is devoted to recent studies of the fractal nature of random sets focusing on some fine properties of the sample path of random walk and Brownian motion In particular the cover time for Markov chains the dimension of discrete limsup random fractals the multi scale truncated second moment and the Ciesielski Taylor identities are explored Tadahisa Funaki s course reviews recent developments of the mathematical theory on stochastic interface models mostly on the so called nabla varphi interface model The results are formulated as classical limit theorems in probability theory and the text serves with good applications of basic probability techniques   **Russian Mathematical Surveys** ,2001   **Statistical Mechanics And The Physics Of Many-particle Model Systems** Alexander Leonidovich Kuzemsky,2017-02-24 The book is devoted to the study of the

correlation effects in many particle systems It presents the advanced methods of quantum statistical mechanics equilibrium and nonequilibrium and shows their effectiveness and operational ability in applications to problems of quantum solid state theory quantum theory of magnetism and the kinetic theory The book includes description of the fundamental concepts and techniques of analysis following the approach of N N Bogoliubov s school including recent developments It provides an overview that introduces the main notions of quantum many particle physics with the emphasis on concepts and models This book combines the features of textbook and research monograph For many topics the aim is to start from the beginning and to guide the reader to the threshold of advanced researches Many chapters include also additional information and discuss many complex research areas which are not often discussed in other places The book is useful for established researchers to organize and present the advanced material disseminated in the literature The book contains also an extensive bibliography The book serves undergraduate graduate and postgraduate students as well as researchers who have had prior experience with the subject matter at a more elementary level or have used other many particle techniques   From Markov Chains To Non-equilibrium Particle Systems (2nd Edition) Mu-fa Chen,2004-03-23 This book is representative of the work of Chinese probabilists on probability theory and its applications in physics It presents a unique treatment of general Markov jump processes uniqueness various types of ergodicity Markovian couplings reversibility spectral gap etc It also deals with a typical class of non equilibrium particle systems including the typical Schl gl model taken from statistical physics The constructions ergodicity and phase transitions for this class of Markov interacting particle systems namely reaction diffusion processes are presented In this new edition a large part of the text has been updated and two and a half chapters have been rewritten The book is self contained and can be used in a course on stochastic processes for graduate students
