Biology and Culture of Percid Fishes Patrick Kestemont, Konrad Dabrowski, Robert C. Summerfelt, 2015-10-15 This extensive work focuses on an important group of temperate freshwater fish approaching the topic from the perspectives of both biology and aquaculture. It compiles the latest research on fish belonging to the Percidae family and describes in detail all biological aspects relevant to the culture of different species including ecology, reproductive physiology, feeding and nutrition, genetics, immunology, stress physiology and behavior. It also considers commercial fish production and fish farming topics such as protocols for induction of gonad maturation, spawning, incubation and larval rearing. Expert contributors not only provide a critical peer review of scientific literature but also original research data and identify effective practical techniques. The book features chapters on systematics, ecology and evolution, on development, metabolism and husbandry of early life stages and on growth, metabolism, behavior and husbandry of juvenile and grow out stages. Furthermore, the authors consider genetic improvement and domestication as well as diseases and health management crucial to the readers' understanding of these fish and how they can be cultured. Both researchers of percid fish biology and aquaculture professionals who are considering intensive and pond culture of percid fishes will value this timely and comprehensive handbook.

Trends in Fisheries and Aquatic Animal Health Panagiotis Berillis, 2017-11-11 Fish and other seafood have always been considered as an important part of human diet and have also long been recognized as a health promoting food for human nutrition. However, managing aquatic food resources remains a challenge as the human population is expanding and overfishing poses a threat to fishing reserves in several areas. Aquaculture is the alternative solution for food production from the sea. According to the FAO, aquaculture is probably the fastest growing food producing sector and can be a sustainable solution for fish production. In order to maximize marine food production and achieving sustainable management of the aquatic environment, knowledge about aspects of fisheries and aquatic animal health is very important. *Trends in Fisheries and Aquatic Animal Health* covers some basic and applied topics in fishery management and fish health with a focus on European regions. The textbook is a combination of reviews and research articles. Topics covered in the book include challenges in fishery management, environmental impacts on fisheries, fish health, pharmacology, histopathology, stress response, telemetry techniques in fisheries research and specific case studies of regional marine species in localized fisheries. This textbook is a useful resource for graduates and professionals involved in advanced training courses for aquaculture and fishery management.

David Hoole, David Bucke, Peter Burgess, Ian Wellby, 2008-04-15 Cyprinids rank as one of the most commercially important groups of freshwater fishes and are exploited for many purposes as a human food source especially in Europe and Asia as sport fish and as ornamental fish for ponds and aquaria. Certain species are also cultured as bait fish and several of the small cyprinids such as the zebra fish have become internationally accepted laboratory models for toxicology testing and molecular research. A thorough understanding of cyprinid health and diseases is fundamental to the successful management and exploitation of these fishes for freshwater fisheries, pisciculture and ornamental productions. This practical guide to disease diagnosis, prevention and control includes numerous colour plates and covers a comprehensive array of diseases, infectious and non-infectious, of cultivated and wild cyprinids. **The Laboratory Zebrafish** Claudia Harper, Christian Lawrence, 2016-04-19 Like other books in the Laboratory Animal Pocket Reference Series, this guide covers all aspects pertaining to the use of these organisms, including their basic biology, humane care and management, husbandry, life support systems, regulatory compliance, technical procedures, veterinary care and water quality management. In the relatively brief span *Tigris and Euphrates Rivers: Their Environment from Headwaters to Mouth* Laith A. Jawad, 2021-09-12 The system of the Tigris-Euphrates Rivers is one of the great river systems of southwestern Asia. It comprises the Tigris and Euphrates Rivers which follow roughly parallel courses through the heart of the Middle East. The lower portion of the region that they run through is known as Mesopotamia, was one of the cradles of civilisation. There are several environmental factors that govern the nature of the two rivers and shape the landscape: the two rivers running through; Geological events create rivers; climate; monitor the water supply; the surrounding land influences the vegetation and the physical and chemical features of water. The Tigris-Euphrates system runs through the territory of four countries: Iraq, Iran, Turkey and Syria. Therefore, any scientific approach to the environment of these two rivers should include the natural history events in these countries. The book *Tigris and Euphrates Rivers: Their Environment from Headwaters to Mouth* will be divided into nine parts. These parts deal with the issues of the environment, the status of the flora and fauna, the abiotic aspects, ecology, hydrological regime of the two rivers, the biotic aspects, Water resources, stress of the environment, conservation issues. Since the book of Julian Rzoska *Euphrates and Tigris: Mesopotamian Ecology and Destiny* in 1980, no book or major reference has been published that includes between its cover the facts and information that the present book will present. Therefore, the importance of the present book falls in stating the present status of the environment of the two rivers and the comparison of their environment between now and that of 37 years ago as given by J. Rzoska, 1980. The recent studies showed that there are a large number of natural and political events that happened within the last three decades in the area of the Tigris-Euphrates river system that for sure have done a great change to the environment of the two rivers and consequently changing the biological and non-biological resources of the two rivers. This book will be a reference book to both Academic and students across the Middle East in different disciplines of knowledge to use in their researches on Tigris-Euphrates river system. The scholars interested

in this area will use this book as a guide to compare this freshwater system with other areas in Asia and the world
