Application of Pattern Recognition and Adaptive DSP Methods for Spatio-temporal Analysis of Satellite Based Hydrological Datasets Anish Chand Turlapaty,2010-06-17 Data assimilation of satellite based observations of hydrological variables with full numerical physics models can be used to downscale these observations from coarse to high resolution to improve microwave sensor based soil moisture observations Moreover assimilation can also be used to predict related hydrological variables e g precipitation products can be assimilated in a land information system to estimate soil moisture High quality spatio temporal observations of these processes are vital for a successful assimilation which in turn needs a detailed analysis and improvement In this research pattern recognition and adaptive signal processing methods are developed for the spatio temporal analysis and enhancement of soil moisture and precipitation datasets These methods are applied to accomplish the following tasks i a consistency analysis of level 3 soil moisture data from the Advanced Microwave Scanning Radiometer EOS AMSR E against in situ soil moisture measurements from the USDA Soil Climate Analysis Network SCAN This method performs a consistency assessment of the entire time series in relation to others and provides a spatial

distribution of consistency levels The methodology is based on a combination of wavelet based feature extraction and oneclass support vector machines SVM classifier Spatial distribution of consistency levels are presented as consistency maps for a region including the states of Mississippi Arkansas and Louisiana These results are well correlated with the spatial distributions of average soil moisture and the cumulative counts of dense vegetation ii a modified singular spectral analysis based interpolation scheme is developed and validated on a few geophysical data products including GODAE s high resolution sea surface temperature GHRSSST This method is later employed to fill the systematic gaps in level 3 AMSR E soil moisture dataset iii a combination of artificial neural networks and vector space transformation function is used to fuse several high resolution precipitation products HRPP The final merged product is statistically superior to any of the individual datasets over a seasonal period The results have been tested against ground based measurements of rainfall over our study area and average accuracies obtained are 85% in the summer and 55% in the winter 2007 Production Planning in
Production Networks Pierluigi Argoneto,Giovanni Perrone,Paolo Renna,Giovanna Lo Nigro,Manfredi Bruccoleri,Sergio Noto La Diega,2008-02-17 Distributed production networks are organizational structures considered able to meet the agility and efficiency necessary to compete in the global market Performances of such organizations depends on the ability of network actors in coordinating their activities There are two approaches for managing complex distributed production networks a centralized approach or a decentralized approach This book addresses production planning problems in distributed manufacturing networks from strategic tactical organisational and operative perspectives New methodologies for capacity negotiation allocation and workload assignment are presented Long medium and short term problems are focused on The proposed approaches are based on negotiation algorithms in multi agent networks and are compared with classical centralised approaches in order to understand the effectiveness and efficiency of these approaches This book will interest production network managers and enterprise resource planning vendors
