Semigroups In Geometrical Function Theory:

Semigroups in Geometrical Function Theory D. Shoikhet, 2013-03-09 Historically complex analysis and geometrical function theory have been intensively developed from the beginning of the twentieth century They provide the foundations for broad areas of mathematics In the last fifty years the theory of holomorphic mappings on complex spaces has been studied by many mathematicians with many applications to nonlinear analysis functional analysis differential equations classical and quantum mechanics The laws of dynamics are usually presented as equations of motion which are written in the abstract form of a dynamical system $\frac{dx}{dt} = f(x)$ where x is a variable describing the state of the system under study and f is a vector function of x The study of such systems when f is a monotone or an accretive generally nonlinear operator on the underlying space has been recently the subject of much research by analysts working on quite a variety of interesting topics including boundary value problems integral equations and evolution problems see for example 19 13 and 29 In a parallel development and even earlier the generation theory of one parameter semigroups of holomorphic mappings in \mathbb{C}^n has been the topic of interest in the theory of Markov stochastic processes and in particular in the theory of branching processes see for example 63 127 48 and 69

Geometric Function Theory in Several Complex Variables Carl H. FitzGerald, Sheng Gong, 2004 The papers contained in this book address problems in one and several complex variables The main theme is the extension of geometric function theory methods and theorems to several complex variables The papers present various results on the growth of mappings in various classes as well as observations about the boundary behavior of mappings via developing and using some semigroup methods

Nonlinear Semigroups, Fixed Points, and Geometry of Domains in Banach Spaces Simeon Reich, David Shoikhet, 2005 Nonlinear semigroup theory is not only of intrinsic interest but is also important in the study of evolution problems In the last forty years the generation theory of flows of holomorphic mappings has been of great interest in the theory of Markov stochastic branching processes the theory of composition operators control theory and optimization It transpires that the asymptotic behavior of solutions to evolution equations is applicable to the study of the geometry of certain domains in complex spaces Readers are provided with a systematic overview of many results concerning both nonlinear semigroups in metric and Banach spaces and the fixed point theory of mappings which are nonexpansive with respect to hyperbolic metrics in particular holomorphic self mappings of domains in Banach spaces The exposition is organized in a readable and intuitive manner presenting basic functional and complex analysis as well as very recent developments Contents Mappings in Metric and Normed Spaces Differentiable and Holomorphic Mappings in Banach Spaces Hyperbolic Metrics on Domains in Complex Banach Spaces Some Fixed Point Principles The Denjoy-Of-Carathéodory Fixed Point Theory Generation Theory for One Parameter Semigroups Flow Invariance Conditions Stationary Points of Continuous Semigroups Asymptotic Behavior of Continuous Flows Geometry of Domains in Banach Spaces
