Semistructured Database Design:

Semistructured Database Design Tok Wang Ling, Gillian Dobbie, 2004-11-19 Semistructured Database Design provides an essential reference for anyone interested in the effective management of semistructured data. Since many new and advanced web applications consume a huge amount of such data, there is a growing need to properly design efficient databases. This volume responds to that need by describing a semantically rich data model for semistructured data called Object Relationship Attribute model for Semistructured data ORA SS. Focusing on this new model, the book discusses problems and presents solutions for a number of topics including schema extraction, the design of non-redundant storage organizations for semistructured data, and physical semistructured database design among others. Semistructured Database Design presents researchers and professionals with the most complete and up-to-date research in this fast-growing field. Programming Richard Connor,2000-12-13 This book constitutes the thoroughly refereed post proceedings of the 7th International Workshop on Database Programming Languages DBPL 99 held in Kinloch Rannoch UK in September 1999 The 17 revised full papers presented together with an invited paper were carefully reviewed and revised for inclusion in the book The book presents topical sections on querying and query optimization languages for document models persistence components and workflows typing and querying semistructured data active and spatial databases and unifying semistructured and traditional data models

Usage-Driven Database Design George Tillmann,2017-04-07 Design great databases from logical data modeling through physical schema definition You will learn a framework that finally cracks the problem of merging data and process models into a meaningful and unified design that accounts for how data is actually used in production systems Key to the framework is a method for taking the logical data model that is a static look at the definition of the data and merging that static look with the process models describing how the data will be used in actual practice once a given system is implemented The approach solves the disconnect between the static definition of data in the logical data model and the dynamic flow of the data in the logical process models The design framework in this book can be used to

create operational databases for transaction processing systems or for data warehouses in support of decision support systems The information manager can be a flat file Oracle Database IMS NoSQL Cassandra Hadoop or any other DBMS Usage Driven Database Design emphasizes practical aspects of design and speaks to what works what doesn't work and what to avoid at all costs Included in the book are lessons learned by the author over his 30 years in the corporate trenches Everything in the book is grounded on good theory yet demonstrates a professional and pragmatic approach to design that can come only from decades of experience Presents an end to end framework from logical data modeling through physical schema definition Includes lessons learned techniques and tricks that can turn a database disaster into a success Applies to all types of database management systems including NoSQL such as Cassandra and Hadoop and mainstream SQL databases such as Oracle and SQL Server What You'll Learn Create logical data models that accurately reflect the real world of the user Create usage scenarios reflecting how applications will use a new database Merge static data models with dynamic process models to create resilient yet flexible database designs Support application requirements by creating responsive database schemas in any database architecture Cope with big data and unstructured data for transaction processing and decision support systems Recognize when relational approaches won't work and when to turn toward NoSQL solutions such as Cassandra or Hadoop Who This Book Is For System developers including business analysts database designers database administrators and application designers and developers who must design or interact with database systems

Database and Expert Systems Applications Heinrich C. Mayr, Jiri Lazansky, Gerald Quirchmayr, Pavel Vogel, 2003-06-29 th DEXA 2001 the 12 International Conference on Database and Expert Systems Applications was held on September 3-5 2001 at the Technical University of Munich Germany The rapidly growing spectrum of database applications has led to the establishment of more specialized discussion platforms DaWaK conference EC Web conference and DEXA workshop which were all held in parallel with the DEXA conference in Munich In your hands are the results of much effort beginning with the preparation of the submitted papers The papers then passed through the reviewing process and the accepted papers were revised to final versions by their authors and arranged with the conference program All this culminated in the conference itself A total of 175 papers were submitted to this conference and I would like to thank all the authors They are the real base of the conference The program committee and the supporting reviewers produced altogether 497 referee reports on average of 2.84 reports per paper and selected 93 papers for presentation Comparing the weight or more precisely the number of papers devoted to particular topics at several recent DEXA conferences an increase can be recognized in the areas of XML databases active databases and multi and hypermedia efforts The space devoted to the more classical topics such as information retrieval distribution and Web aspects and transaction indexing and query aspects has remained more or less unchanged Some decrease is visible for object orientation
