Dayme, 2009-08-29 During the past decades Dynamics of the singing voice has successfully been established as a reference text for teachers of singing singers choral conductors and organists speech and voice therapists laryngologists and other health professionals psychologists and those in linguistics It discusses the physiological psychological musical and emotional aspects of the voice particularly as they relate to singing but also to speaking The book provides a greater understanding of how the voice works and the many factors involved in singing as well as an objective discussion of singing without reference to specific techniques In this fifth edition the author has now updated and rearranged the content Furthermore she has added a new chapter on vocal pedagogic aspects in order to meet the requirements of the art of singing of the 21st century Thus this new book provides the reader with the established concepts in combination with the latest knowledge about modern approaches to the singing voice **The Laws of Emotion** Nico H. Frijda, 2017-09-25 The Laws of Emotion is an accessible work that reviews much of the insightful new research on emotions conducted over the last ten years It expands on the theory of emotions introduced in Nico Frijda's earlier work and addresses a number of unanswered basic problems on emotion theory The author's goal is to better understand the underlying psychological mechanisms of emotion In this book Professor Frijda also examines previously neglected topics of emotion such as determinants of emotional intensity the duration of emotions and sexual emotions It touches on both evolutionary and neuroscientific explanations The book begins by reviewing a number of principles governing emotion or the laws of emotion The author then examines the passionate nature of emotions and the motivational processes underlying them and the nature and causes of pleasure and pain Professor Frijda then explores the processes that lead to emotional arousal including cognitive influences and why people care more about certain things than others Emotional intensity is then discussed including the often neglected topic of the course of emotions over time The book concludes with the author's insights into complex emotional domains such as sex revenge and the need to commemorate past events The Laws of Emotion will appeal to social cognitive and developmental psychologists social scientists philosophers and neuroscientists as well as anyone interested in the workings of the mind It also serves as a text for advanced courses in the psychology of

We Are Music: An Existential Journey Toward Infinity John Stephen Sharpley, 2024-02-15 What is music Modern society has come to view music largely as entertainment and commodity In response We Are Music An Existential Journey Toward Infinity provides the reader with a holistic starting point Music has unlimited potential to transform and enlighten and is only impeded when bound by materialism physicalism and reductionism We Are Music is an attempt to bring music back to the core of humanity as an agent of positive empowerment self actualization and beyond Embracing interconnectivity music is more deeply experienced alongside the arts science social sciences math philosophy history and above all spirituality An endless spiral self perception and identity can be vastly expanded if not questioned and transcended Music is an infinite field and any attempt to define and describe it is problematically finite and consequently limited Herein lies the impossibility of the book which both excites and disturbs the paradox of being and not being A roadmap for music lovers toward self realization We Are Music is for those who desire to delve deeper into the power and illusion of self through music

M. Overbeek,W. Frank Pasveer,2007-12-22 Fred Boekhorst Steady progress in Information and Communication technology has advanced the Internet once merely a tool for exchange of scientific information between universities to a platform that enables the transformation of our society In this new digital society people can take more informed decisions because of new mechanisms for finding what you are looking for Google new mechanisms of accessing background knowledge Wikipedia new ways of engaging with one another chat new ways of trading goods eBay and many more While these represent already profound changes in our lifestyle the effects of digitizing society have just begun So far the Internet has made information accessible through computer screens but the next wave will be The Internet of Things Environments will become smart and responsive to the presence of people and objects The key underlying technology here is embedded sensor technology that allows sensors to monitor people and their environment and to communicate measurements The combination of the Internet representing Intelligence and pervasiveness and sensor networks representing Ambient probing will unlock many new applications for example in the field of optimized logistics smart agriculture or more intelligent living environments At Philips we have set up three different laboratory environments that aim to research how an intelligent environment could help people One of those environments is called Care Lab in which we investigate how technology could help elderly maintain an independent lifestyle

Music, Mind, and Brain Manfred Clynes,2013-06-29 There is much music in our lives yet we know little about its function Music is one of man's most remarkable inventions though possibly it may not be his invention at all like his capacity for language his capacity for music may be a naturally evolved biologic function All cultures and societies have music Music differs from the sounds of speech and from other sounds but only now do we find ourselves at the threshold of being able to find out how our brain processes musical sounds differently from other sounds We are going through an exciting time when these questions and the question of how music moves us are being seriously investigated for the first time from the perspective of the coordinated functioning of the organism the perspective of brain function motor function as well as perception and experience There is so much we do not yet know But the roads to that knowledge are being opened and the coming years are likely to see much progress towards providing answers and raising new questions These questions are different from those music theorists have asked themselves they deal not with the structure of a musical score although that knowledge is important and necessary but with music in the flesh music not outside of man to be looked at from written symbols but music man as a living entity or system **Passion and Reason** Richard S. Lazarus,Bernice N.

Lazarus,1994-11-03 When Oxford published Emotion and Adaptation the landmark 1991 book on the psychology of emotion by internationally acclaimed stress and coping expert Richard Lazarus Contemporary Psychology welcomed it as a brightly shining star in the galaxy of such volumes Psychiatrists psychologists and researchers hailed it as a masterpiece a major breakthrough in our understanding of the emotional process and its central role in our adaptation as individuals and as a species What was still needed however was a book for general readers and health care practitioners that would dispel the myths still surrounding cultural beliefs about emotion and systematically explain the relevance of the new research to the emotional dramas of our everyday lives Now in Passion and Reason Lazarus draws on his four decades of pioneering research to bring readers the first book to move beyond both clinical jargon and feel good popular psychology to really explain in plain accessible language how emotions are aroused how they are managed and how they critically shape our views of ourselves and the world around us With his co author writer Bernice Lazarus Dr Lazarus explores the latest findings on the short and long term causes and effects of various emotions including the often conflicting research on stress management and links between negative emotions and heart disease cancer and other aspects of physical and psychological health Lazarus makes a strong case that contrary to common assumption emotions are not irrational our emotions and our analytical thought processes are inextricably linked While not a how to book Passion and Reason does describe how readers can interpret what lies behind their own emotions and those of their families friends and co workers and how to manage them more effectively Exploring fifteen emotions in depth from love to jealousy the authors show how the personal meaning we give to the events and conditions of our lives trigger such emotions as anger anxiety guilt and pride They provide fascinating vignettes to frame a biography of each emotion Some are composite case histories drawn from Dr Lazarus s long career but most are stories of people the Lazaruses have known over the years people whose emotional fears conflicts and desires mirror readers own The Lazaruses also offer a special chapter on the diverse strategies of coping people use in managing their emotions and another When Coping Fails on psychotherapy and its approaches to emotional stress and dysfunction from traditional Freudian psychoanalysis to continuing research into relaxation techniques meditation hypnosis and biofeedback Packed with insight and compellingly readable Passion and Reason will enrich all readers fascinated by our emotional lives **Beethoven's**

Anvil William Benzon,2002 7F Why does the brain create music This text argues that the key to music s function lies in the very complexity of musical experience As well as being both personal and social the creation of music taps into the whole spectrum of human skills both physical and mental **The Science & Psychology of Music Performance** Richard

Parncutt,Gary McPherson,2002 What type of practice makes a musician perfect What sort of child is most likely to succeed on a musical instrument What practice strategies yield the fastest improvement in skills such as sight reading memorization and intonation Scientific and psychological research can offer answers to these and other questions that musicians face every day In The Science and Psychology of Music Performance Richard Parncutt and Gary McPherson assemble relevant current

research findings and make them accessible to musicians and music educators This book describes new approaches to teaching music learning music and making music at all educational and skill levels Each chapter represents the collaboration between a music researcher usually a music psychologist and a performer or music educator This combination of expertise results in excellent practical advice Readers will learn for example that they are in the majority 57% if they experience rapid heartbeat before performances the chapter devoted to performance anxiety will help them decide whether beta blocker medication hypnotherapy or the Alexander Technique of relaxation might alleviate their stage fright Another chapter outlines a step by step method for introducing children to musical notation firmly based on research in cognitive development Altogether the 21 chapters cover the personal environmental and acoustical influences that shape the learning and performance of music

Rethinking Music Nicholas Cook, Mark Everist, 1999 Academic musical studies have gone through a period of rapid change in recent years the musicological agenda has been expanded to include a broad range of sociological and ideological issues while the very status of music theory with its apparent dependence on the autonomous musical work has been thrown into doubt The time is ripe for a comprehensive re evaluation of our thinking about music in the light of such recent developments Rethinking Music is in two parts Part 1 focuses on approaches to musical texts covering such topics as the relationship of text and context concepts of unity and meaning in music and the role of empirical approaches together with compositional and performance perspectives Underlying the volume as a whole is the question of how far and in what ways music theory can remain viable and valuable in a changing intellectual environment Part 2 sets out to reflect the nature of the discipline of musicology and the ways in which it has been and may be challenged and enriched The volume examines music history and cultural histories of music The status of the musical text is a subject that has clear resonances in Part 1 and themes developed in Part 2 include questions of ethics pedagogy performance and popular music as subjects for scholarly enquiry questions of reception canon gender and historiography

The Codes of Life Marcello Barbieri, 2007-10-26 Building on a range of disciplines from biology and anthropology to philosophy and linguistics this book draws on the expertise of leading names in the study of organic mental and cultural codes brought together by the emerging discipline of biosemiotics The book's 18 chapters present a range of experimental evidence which suggests that the genetic code was only the first in a long series of organic codes and that it has been the appearance of new codes organic mental and cultural that paved the way for the major transitions in the history of life While the existence of many organic codes has been proposed since the 1980s this volume represents the first multi authored attempt to deal with the range of codes relevant to life and to reveal the ubiquitous role of coding mechanisms in both organic and mental evolution This creates the conditions for a synthesis of biology and linguistics that finally overcomes the old divide between nature and culture The book will appeal to all those interested in the origins and evolution of life including biologists from molecular and cellular biologists to evolutionary and developmental biologists ecologists anthropologists psychologists philosophers of science linguists and

researchers interested in the history of science the origins of life artificial life and intelligence and information theory and communication technology
