Spasticity Management Valerie Stevenson, Louise Jarrett, 2006-07-26

Spasticity is a common symptom seen in many neurological conditions notably head injury spinal cord injury stroke cerebral palsy and multiple sclerosis It is also the dominant feature in a number of rarer conditions such as tropical and hereditary spastic paraparesis HSP The fact that it is relevant to many chronic neurological conditions and that the absence of multi disciplinary input can result in progressive disability ensures spasticity management is a prominent feature in the current National Service Framework NSF for long term neurological conditions In the future more long term care for such patients will be done in primary care and the community It is therefore essential that a multi disciplinary approach is used with successful liaison between secondary primary and social care Optimum management of spasticity is dependent on an understanding of its underlying physiology an awareness of its natural history an appreciation of the impact on the patient and a comprehensive approach to minimising that impact which is both multi disciplinary and consistent over time Regrettably these essential requirements are rarely met and consequently inadequately managed spasticity results in a range of painful and disabling sequelae which with the right approach are for the most part preventable Although there are several excellent publications looking at this area none are a truly practical guide relevant to all members of the multi disciplinary team involved in spasticity management Anyone who has been involved in setting up a new service knows how difficult and how protracted a process this can be and if it has been done before why reinvent it The basis of this manual is to collect together the experience and knowledge of such a team who have worked in this area for 10 years now It pulls together all areas including how to set up and develop a service as well as useful management strategies On a practical note it includes complete copies of all of our patient information assessment proformas protocols for different interventions nursing care plans and an integrated care pathway for outpatient spasticity management both as hard copy but also on CD ROM to aid in reproduction These protocols are of course specific to our team but could easily be adapted for use in other centres We are not saying this is the right or only way to run a spasticity service and there is certainly room for improvement but we hope by sharing our experience we can help others to develop their own service thus improving management for all individuals with spasticity

Children's Orthopaedics and Fractures Michael Benson, John Fixsen, Malcolm Macnicol, Klausdieter Parsch, 2010-01-23

Concerning the British genetic trait for writing and publishing as well as acting two English Oxford and London and a Scottish orthopaedic surgeon Edinburgh have produced a third edition of their comprehensive text joined as in the second edition by an editor from Germany recognizing its part in the European community The 62 physician contributors

are drawn from pink colored countries in our childhood geography books the old British Empire from Australia to Zambia and two from the former colony the USA The original purpose of the book was to give residents or registrars an easily accessible and concise description of diseases and conditions encountered in the practice of paediatric orthopaedic surgery and to prepare for their examinations But the practicing orthopaedic surgeon will find an update of current practice that can be read for clarity and constraint enough but not too much A foreword might be a preview of things to come but a back word of what was thought to be the final say on the subject is needed for a perspective in progress A back word look reveals the tremendous progress in medical diagnosis and treatment of which paediatric orthopaedics and fracture care is a component Clubfoot treatment based on the dictums of Hiram Kite has had a revolutionary change by Ponseti The chapter by Eastwood has the details on cast application and orthotics follow up to obtain the 95% correction without the extensive surgery many of us thought was needed
