Towards a neuroscience of social interaction Ulrich Pfeiffer, Bert Timmermans, Kai Vogeley, Chris Frith, Leonhard Schilbach, The burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities However in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition i e social cognition from a detached observer's point of view asking study participants to read out the mental states of others without being engaged in interaction with them Consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience More recently a growing number of researchers have begun to study online social cognition i e social cognition from a participant's point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them Whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents Furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition In order to promote the development of the neuroscientific investigation of online social cognition this Frontiers Research Topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of at least two individuals and sometimes two brains rather

than single individuals and brains responding to a social context Specifically this Research Topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms Here an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds For this Research Topic we therefore solicit reviews original research articles opinion and method papers which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations methodological innovations computational approaches developmental and patient studies By focusing on cutting edge research in social neuroscience and related fields this Frontiers Research Topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social

Jackson, Andrea A. Chiba, Robert F. Berman, Michael E. Ragozzino, 2015-09-19 This exciting volume offers an up to date tour of current trends in the neurobiology of memory while saluting Raymond Kesner's pioneering contributions to the field as a theorist and researcher teacher and mentor Starting with his signature chapter introducing the Attribute Model of Memory the first half of the book focuses on the central role of the hippocampus in processing dimensions of space and time and branches out to memory system interactions across brain structures Later chapters apply the attribute model to multiple functions of memory in learning and to specific neurological contexts including Huntington's disease traumatic brain injury and Fragile X As a bonus the book concludes with an essay on Kesner's life and work and reminiscences by colleagues Among the topics covered How the hippocampus supports the spatial and temporal attributes of memory Self regulation of memory processing centers of the brain Multiple memory systems the role of Kesner's Attribute Model in understanding the neurobiology of memory Pattern separation a key processing deficit associated with aging Prefrontal cortex and basal ganglia attributes underlying behavioral flexibility Memory disruption following traumatic brain injury Cognitive neuroscientists neuropsychologists gerontologists psychiatrists and neurobiologists will find The Neurobiological Basis of Memory both enlightening and inspiring much like Kesner himself How Children Invented Humanity David F. Bjorklund, 2021 Children Childhood and Development in Evolutionary Perspective Changeable Children Evolved Plasticity and Development Adaptable Ancestors Developmental Plasticity and Evolution Embryos and Ancestors The Adaptive Value of Immaturity or The Benefits To Being Young at Heart Developing the Evolved Social Brain Evolutionary Mismatches in the Development of Today's Children Epilogue How Children Invented Humanity *The Emergence of Whitehead's Metaphysics, 1925-1929* Lewis S. Ford, 1985-06-30 A breathtaking detective story this book charts the adventure of Whitehead's ideas in a remarkably detailed and careful reconstruction of his metaphysical views Incorporating heretofore unpublished material from students notes and correspondence Professor Ford analyzes the order of composition of various portions of Whitehead's books principally Science and the Modern World Religion in the Making and Process and Reality Ford's reconstructive method is perfectly tailored to his subject for Whitehead revised by inserting new material rather than altering or deleting the old Thus Ford is able to date the sequence of the composition of many passages In distinguishing these layers of articulation he has pushed the techniques of higher criticism beyond anything the French structuralists and deconstructionists have dreamed of and chronicled an extraordinary intellectual biography **The Heartstone** Helene Opocensky, 2021-07-13 Corbin a powerful shapeshifting young mage is just beginning to learn to flex and harness his magical powers When he hears that a young witch who doesn't know that her strangeness is due to magic has run away for fear of

being institutionalized for a second time he knows that he has to help his friends find her so that she can learn to celebrate what makes her different rather than fear it What he doesn't know is that finding her will snowball him into a position where he again feels obligated to his scheming former mentor Max Grobian Nor does he know that Max will once more try to manipulate him into betraying her daughter Lorelei a girl Corbin feels heart bound to yet fears to fully love Book Review Praise for The Trueheart What I loved most about this book was the all of the worldbuilding Every element was developed with a great attention to detail The history the way the magic works the reasons behind everything that happens past and present nothing was left out The writing truly puts you inside the story so you are surrounded by it in the best way possible The characters were also deeply developed so I felt connected to all of them They all had a purpose in the story none of them felt like they were there just to take up space which I really liked Overall I really enjoyed this book and I don't have any complaints If you're looking for a fantasy book with lots of attention given to the world building this book might be for you YA Book Reviews <http://reviewsofyabooks.blogspot.com>
