H. Nagel,1973      **Turing's Legacy** David M. Yates,1997 During the second half of the twentieth century the use of  
computers has transformed working life in the developed world The National Physical Laboratory NPL is one of the cradles of  
this revolution This book outlines its contribution to modern computing history covering the vital role played by Alan Turing  
the Pilot ACE and ACE computers developed from his plans and the fertile marriage of computers and communications in the  
1960s      *Second International Joint Conference on Pattern Recognition, August 13-15, 1974* ,1974      **Pattern**  
**Recognition Theory and Application** King Sun Fu,A.B. Whinston,1977-12-31 Research in the field of pattern recognition  
both in the theoretical terms and in the area of application continues to flourish Pattern recognition is a fairly diverse field  
involving researchers whose primary disciplines spread over at least a half dozen fields Possibly because of the great  
diversity of backgrounds but a common interest in certain broad areas of application the field has grown so rapidly and yet  
seems to promise at least a similar growth rate for the future This book is a collection containing some of the papers that  
were presented at the NATO Advanced Study Institute held in Bandol France September 1975 The main purpose of the  
institute was to present material which would provide a basic background in the field Thus survey papers covering syntactic  
methods picture processing classification theory and speech recognition were presented This should have provided the  
listener and we hope now the reader with an acquaintance with the basic tools a look at some of the applications and an  
appraisal of how each of the particular topics will evolve A more recent addition to the pattern recognition family is the work  
in the areas of economics and group choice Since the process of recognizing and interpreting patterns is so fundamental it  
probably is no surprise when a particular discipline is discovered to be amenable to the already developed techniques
