Machine Vision Herbert Freeman, 2012-12-02 *Machine Vision Algorithms Architectures and Systems* contains the proceedings of the workshop Machine Vision Where Are We and Where Are We Going sponsored by the Center for Computer Aids for Industrial Productivity CAIP at Rutgers University and held in April 1987 in New Brunswick New Jersey The papers review the state of the art of machine vision and sets directions for future research Topics covered include smart sensing in machine vision computer architectures for machine vision and range image segmentation Comprised of 14 chapters this book opens with an overview of smart sensing strategies in machine vision and illustrates how smart sensing may fit into a general purpose vision system by implementing a flexible modular system called Pipeline Pyramid Machine The discussion then turns to a hierarchy of local autonomy for processor arrays focusing on the progression from pure SIMD to complete MIMD as well as the hardware penalties that arise when autonomy is increased The following chapters explore schemes for integrating vision modules on fine grained machines computer architectures for real time machine vision systems the application of machine vision to industrial inspection and characteristics of technologies and social processes that are inhibiting the development and or evolution of machine vision Machine vision research at General Motors is also considered The final chapter assesses future prospects for machine vision and highlights directions for research This monograph will be a useful resource for practitioners in the fields of computer science and applied mathematics

Intelligent Vision Systems for Industry Bruce G. Batchelor, Paul F. Whelan, 2012-12-06 The application of intelligent imaging techniques to industrial vision problems is an evolving aspect of current machine vision research Machine vision is a relatively new technology more concerned with systems engineering than with computer science and with much to offer the manufacturing industry in terms of improving efficiency safety and product quality Beginning with an introductory chapter on the basic concepts the authors develop these ideas to describe intelligent imaging techniques for use in a new generation of industrial imaging systems Sections cover the application of AI languages such as Prolog the use of multi media interfaces and multi processor systems external device control and colour recognition The text concludes with a discussion of several case studies that illustrate how intelligent machine vision techniques can be used in industrial applications

Food Process Monitoring Systems A.C. Pinder, G. Godfrey, 2012-12-06 The manufacture of foods and beverages is a highly competitive international industry and the range of products is becoming increasingly diverse Manufacturers are required to produce quality foods with the highest possible efficiency and lowest possible cost and international legislation is imposing strict controls on food safety Process control is the essential link between quality safety and cost Radical changes in the technology of manufacturing bring with them new requirements for monitoring and ultimately controlling increasingly complex parameters The aim of this book is to review the latest developments in monitoring systems particularly those suitable for the rapid sensing of composition structure or microbial status The emphasis is on up and coming methods that

have been proven in the laboratory or in other industrial environments and offer potential in the food sector As such it is hoped that this book will increase the general awareness of what new systems have to offer and will act as a catalyst in the technology transfer process The book features chapters on automated machine vision fluorescence cytometry infrared spectroscopy light scattering spectroscopy ultra sound mass spectrometry and chemical and biological sensors In all cases the basic approach is to describe the underlying principles and then to consider the implementation of a particular technique Examples are given of the practical application to specific problems in the food industry Machine Vision Applications, Architectures, and Systems Integration ,1995 **Machine Vision for the Inspection of Natural Products** Mark
