Byrne, 2008-09-30 Editor Joseph P Byrne together with an advisory board of specialists and over 100 scholars research scientists and medical practitioners from 13 countries has produced a uniquely

interdisciplinary treatment of the ways in which diseases pestilence and plagues have affected human life From the Athenian flu pandemic to the Black Death to AIDS this extensive two volume set offers a sociocultural historical and medical look at infectious diseases and their place in human history from Neolithic times to the present Nearly 300 entries cover individual diseases such as HIV AIDS malaria Ebola and SARS major epidemics such as the Black Death 16th century syphilis cholera in the nineteenth century and the Spanish Flu of 1918 19 environmental factors such as ecology travel poverty wealth slavery and war and historical and cultural effects of disease such as the relationship of Romanticism to Tuberculosis the closing of London theaters during plague epidemics and the effect of venereal disease on social reform Primary source sidebars over 70 illustrations a glossary and an extensive print and nonprint bibliography round out the work Cold War Resistance Marc Landas, 2020-10 In June 1941 a pair of British scientists boarded a plane for America with World War II raging all around them They carried a precious commodity penicillin and the knowledge that it would change history Once the U S government had been debriefed the Office of Science Research and Development in conjunction with British counterparts assumed control and penicillin became a top secret matter of national security second in importance only to the atomic bomb In Cold War Resistance Marc Landas uncovers the dark history behind the discovery production and distribution of penicillin and other antibiotics In 1949 the United States embargoed any material deemed of strategic importance including antibiotics from going to Communist countries effectively shutting off the Soviet Union from a modern medical miracle The Soviets responded by creating satellite antibiotic factories in Warsaw Pact countries that produced subpar antibiotics which soon led to antibiotic resistance Today the number of effective antibiotics available is dwindling and the state of antibiotic resistance is worsening The Cold War played a critical role in fostering this resistance as Landas argues in this pathbreaking history of the international struggle over antibiotics **Emerging Infections** Ron Barrett, Molly Zuckerman, Matthew Ryan Dudgeon, George J. Armelagos, 2024-03-20 Serving as both an accessible textbook and an original synthesis of interdisciplinary scholarship Emerging Infections traces the social and environmental determinants of human infectious diseases from the Paleolithic to the present day Contrary to earlier predictions of a post infectious era humanity now faces a post antimicrobial era with the emergence of drug resistant pathogens and the entry of new and deadly viruses such as Ebola and COVID 19 in the human population Yet despite the novelty of these infections their evolution is primarily driven by the same human activities of subsistence settlement and social organization that have been recurring over the last ten thousand years Approaching these activities from a biocultural perspective this book examines the prehistory and history of human infectious diseases Much has happened in the decade since the first edition with significant developments in both disease research and in the evolution of the diseases themselves As such this new edition has been expanded to include recent epidemics of Ebola Zika MERS and of course COVID 19 Indeed the book's biocultural approach is especially relevant to the COVID 19 pandemic examining it from a deep time perspective and placing it within a much needed explanatory framework

Emerging Infections is suitable for advanced undergraduates graduates and researchers in anthropology the medical social sciences public health and the history of medicine The book will also appeal to a more general readership with an interest in public health and infectious diseases

Historical Dictionary of the 1940s James Gilbert Ryan, Leonard C Schlup, 2015-03-26 The only available historical dictionary devoted exclusively to the 1940s this book offers readers a ready reference portrait of one of the twentieth century s most tumultuous decades In nearly 600 concise entries the volume quickly defines a historical figure institution or event and then points readers to three sources that treat the subject in depth In selecting topics for inclusion the editors and authors offer a representative slice of life as contemporaneous Americans saw it with coverage of people movements court cases and economic social cultural political military and technological changes The book focuses chiefly on the United States but places American lives and events firmly within a global context

Rang & Dale's Pharmacology Humphrey P. Rang, Maureen M. Dale, James M. Ritter, Rod J. Flower, Graeme Henderson, 2011-04-14 Rang Amino Acid Transmitters Analgesic Drugs Antidepressant Drugs and Drug Addiction Dependence Inflammatory Mediators Pharmacogenetics Pharmacogenomics Hydroxytyptomine and Purines

Science and Technology in 20th-Century American Life Christopher Cuno, 2007-08-30 The twentieth century witnessed the greatest changes in technology and science that humans have ever witnessed These occurred rapidly and affected such a broad range of people Scientists inventors and engineers built upon the great inventions of the 19th century to expand the reach of modern technology for a citizen in 1900 communication transportation and agricultural was still primarily local activities by 2000 an American citizen was part of an interconnected global community These developments in science and technology were also important in the social and cultural changes of the period The Great Depression the World Wars and Cold War the civil rights and women s rights movements all were greatly impacted by the rapid scientific and technological advancements in the universities and industry

Fighting the First Wave Peter Baldwin, 2021-03-18 COVID 19 is the biggest public health and economic disaster of our time It has posed the same threat across the globe yet countries have responded very differently and some have clearly fared much better than others Peter Baldwin uncovers the reasons why in this definitive account of the global politics of pandemic He shows that how nations responded depended above all on the political tools available how firmly could the authorities order citizens lives and how willingly would they be obeyed In Asia nations quarantined the infected and their contacts In the Americas and Europe they shut down their economies hoping to squelch the virus s spread Others above all Sweden responded with a light touch putting their faith in social consensus over coercion Whether citizens would follow their leaders requests and how soon they would tire of their demands were crucial to hopes of taming the pandemic

Attack of the Superbugs Kathiann M. Kowalski, 2005 Explains how many pathogens have evolved and become resistant to antibiotics and examines the problems this causes around the world and how scientists might overcome them

An Unnatural History of Emerging Infections Ron Barrett, George Armelagos (the late), 2013-09-19 This book

traces the social and environmental determinants of human infectious diseases from the Neolithic to the present day. Despite recent high profile discoveries of new pathogens the major determinants of these emerging infections are ancient and recurring. These include changing modes of subsistence, shifting populations, environmental disruptions and social inequalities. The recent labeling of the term re-emerging infections reflects a re-emergence not so much of the diseases themselves but rather a re-emerging awareness in affluent societies of long standing problems that were previously ignored. An Unnatural History of Emerging Infections illustrates these recurring problems and determinants through an examination of three major epidemiological transitions. The First Transition occurred with the Agricultural Revolution beginning 10 000 years ago, bringing a rise in acute infections as the main cause of human mortality. The Second Transition first began with the Industrial Revolution; it saw a decline in infectious disease mortality and an increase in chronic diseases among wealthier nations but less so in poorer societies. These culminated in today's worst of both worlds syndrome in which globalization has combined with the challenges of the First and Second Transitions to produce a Third Transition characterized by a confluence of acute and chronic disease patterns within a single global disease ecology. This accessible text is suitable for advanced undergraduate and graduate level students and researchers in the fields of epidemiology, disease ecology, anthropology, health sciences and the history of medicine. It will also be of relevance and use to undergraduate students interested in the history and social dynamics of infectious diseases.
