Properties Of Matter - Proceedings Of The National School "New Developments And Magnetism's Applications" L. Lanotte, F. Lucari, L. Pareti, 1996-08-22. This book presents the special properties of low-dimensional magnetic systems, i.e., film, multilayers, fine particles, nanostructured materials, and reflecting the recent researches. It is divided into four parts: i) contains a phenomenological description of the fundamentals of magnetism; ii) covers preparation and properties of films and multilayers with special emphasis on Giant Magnetoresistance; iii) focuses on fine particles and nanostructured systems; and iv) dedicated to innovative magnetic materials for the next generation. Design of High-speed Communication Circuits

Ramesh Harjani, 2006. MOS technology has rapidly become the de facto standard for mixed-signal integrated circuit design due to the high levels of integration possible as device geometries shrink to nanometer scales. The reduction in feature size

means that the number of transistor and clock speeds have increased significantly In fact current day microprocessors contain hundreds of millions of transistors operating at multiple gigahertz Furthermore this reduction in feature size also has a significant impact on mixed signal circuits Due to the higher levels of integration the majority of ASICs possesses some analog components It has now become nearly mandatory to integrate both analog and digital circuits on the same substrate due to cost and power constraints This book presents some of the newer problems and opportunities offered by the small device geometries and the high levels of integration that is now possible The aim of this book is to summarize some of the most critical aspects of high speed analog RF communications circuits Attention is focused on the impact of scaling substrate noise data converters RF and wireless communication circuits and wireline communication circuits including high speed I O
