**Magnetofluidynamics in Channels and Containers** U. Müller, L. Bühler, 2001-03-20 The book deals with the theme of incompressible flows of electrically conducting fluids in hydraulic components The main content of the book is a result of engineering research associated with the design of liquid metal cooling systems for fusion reactors The book is well suited to serve as a guide for utilising magnetohydrodynamic means in other engineering disciplines such as in material processing metallurgical engineering and power engineering

**Magnetofluidynamics in Channels and Containers** U. Müller, L. Bühler, 2013-03-09 The contents of this book has been the subject of a lecture course which the first author has held regularly for engineering students at the Technical University of Karlsruhe beginning in 1987 The book serves two purposes It introduces students in their fourth year study of basic engineering and graduate students to the fundamentals of magnetohydrodynamics Furthermore it may be used by engineers and physicists in research establishments and industry as a practical tool to become familiar with the particular phenomena of magnetohydrodynamics that they may encounter in technical liquid metal flows under the influence of magnetic fields The contents and structure of the book are motivated by the research and development work for a self cooled liquid metal blanket of future nuclear fusion reactors The research requirements for such a challenging project naturally lead to the frontiers of magnetohydrodynamic research This is reflected in the book by references to several publications and reports performed at the Forschungszentrum Karlsruhe and other research establishments However we are convinced that the advancement of magnetohydrodynamic knowledge gained within the framework of the Fusion Reactor Project may be utilized in other fields of engineering sciences

Boundary Element Method for Magnetohydrodynamic Flow Münevver Tezer-Sezgin, Canan Bozkaya, 2024-05-20 Boundary Element Method for Magnetohydrodynamic Flow offers one of the first systematic and detailed treatments of the application of boundary element method BEM to magnetohydrodynamic MHD flow problems It aims to fill in the gaps left by the earlier books on the application of BEM to some physical problems such as fluid dynamics elasticity and geophysics An overview of the theory of MHD flow and a comprehensive mathematical formulation of BEM for convection diffusion type differential equations are provided by the authors who heavily rely on their research and experience in the disciplines of BEM and MHD flow The book first discusses the basic principles of the BEM approach for the MHD duct flow problems in coupled form with the fundamental solution derived by the authors Specifically the BEM solutions of MHD flow in pipes of rectangular or circular cross sections and MHD flow in infinite regions are all covered emphasizing the convergence of infinite boundary integrals This book especially concentrates on the MHD flow in regions with partly insulated partly perfectly conducting boundaries by BEM giving also the parabolic boundary layer thickness emanating from the points of discontinuities on the walls The book secondly includes the dual reciprocity boundary element technique DRBEM an alternative form of BEM that expands the applicability of BEM to MHD flow and heat transfer problems as well as buoyancy MHD flow with magnetic

potential and inductionless MHD flow The purpose of the book is to serve as a research book for applied mathematicians engineers scientists and graduate students who wish to learn in depth about the formulation and application of BEM in MHD flow problems As such it is an invaluable resource and a major contribution to the numerical solution of MHD flow problems

Plasma Physics and Magnetohydrodynamics ,1963 *Electrically Induced Vortical Flows* V. Bojarevičs, Ya. Freibergs, E.I. Shilova, É.V. Shcherbinin, 2012-12-06 Every scientific subject probably conceals unexplored or little investigated strata which may show up at the proper time when favourable conditions coincide practical demands a circle of scientists prepared to recognize the novelty and capable of giving impetus to the development of a new theory etc Something like this occurred in early seventies for magnetohydrodynamics which at the time was considered to be a relatively complete branch of hydrodynamics with no apparent broad unexplored areas It was unexpectedly realized that in addition to the traditional methods of affecting an electrically conducting medium there is yet another way one which subsequently lead to a new direction in magnetohydrodynamics In the Soviet scientific literature this direction has been termed electrically induced vortex flows the essence of which are hydrodynamic effects due to the interaction of an electric current passing through the fluid with its own magnetic field It cannot be said that this direction was created ex nihilo individual studies related to the flows driven in a current carrying medium in the absence of external magnetic fields appeared in the sixties in the thirties the flows themselves were known to take place within electrical arcs and yet the first observations on the behaviour of liquid current carrying conductors were made at the beginning of this century

**The Developments and the Applications of the Numerical Algorithms in Simulating the Incompressible Magnetohydrodynamics with Complex Boundaries and Free Surfaces** Jie Zhang, 2018-05-25 This thesis presents an accurate and advanced numerical methodology to remedy difficulties such as direct numerical simulation of magnetohydrodynamic MHD flow in computational fluid dynamics CFD grid generation processes in tokamak fusion facilities and the coupling between the surface tension force and Lorentz force in the metallurgical industry In addition on the basis of the numerical platform it establishes it also investigates selected interesting topics e.g single bubble motion under the influence of either vertical or horizontal magnetic fields Furthermore it confirms the relation between the bubble's path instability and wake instability and observes the anisotropic isotropic effect of the vertical horizontal magnetic field on the vortex structures which determines the dynamic behavior of the rising bubble The direct numerical simulation of magnetohydrodynamic MHD flows has proven difficult in the field of computational fluid dynamic CFD research because it not only concerns the coupling of the equations governing the electromagnetic field and the fluid motion but also calls for suitable numerical methods for computing the electromagnetic field In tokamak fusion facilities where the MHD effect is significant and the flow domain is complex the process of grid generation requires considerable time and effort Moreover in the metallurgical industry where multiphase MHD flows are usually encountered the coupling between the surface tension force and Lorentz force adds to the difficulty of deriving direct numerical

Moreau,2012-12-06 Liquid metal MHD is within the scope of two series of international conferences One is the International Congress on MHD Power Generation held every four years which includes technical and economical aspects as well as scientific questions The other is the Beer Sheva Seminar on MHD Flows and Turbulence held every three years in Israel In addition to these well established meetings an IUTAM Symposium was previously organized in Cambridge UK in 1982 on Metallurgical Applications of MHD by the late Arthur Shercliff It was focussed on a very specific subject developing rapidly from the middle of the 1970 s The magnetic field was generally AC including frequencies high enough for the skin depth to be much smaller than the typical length scale of the liquid pool And the development of new technologies or the improvement of existing ones was the main justification of most of the researches presented and discussed Only two participants from Eastern countries attended this Symposium By the middle of the 1980 s we felt that on this very same topic ideas had reached much more maturity than in 1982 We also realized that a line of research on MHD flows related to fusion reactors tokamaks was developing significantly with particular emphasis on flows at large interaction parameter      NBS Publications Newsletter ,1981 A newsletter for librarians documentalists and science information specialists
