Magneto-optics Under Conditions of the Integer and Fractional Quantum Hall Effect in Si MOSFET I. V. Kukushkin, V. B. Timofeev, 1989 Part of a series reporting to the West on developments in Soviet physics research and which aims to provide material for research scientists who do not read Russian this first volume reviews the optical spectroscopy method for investigating 2D electron energy spectra in a transverse magnetic field under integer and fractional OHE conditions The structure of the Landau levels the oscillations of DOS peak widths and the amplitude and linear scale of the fluctuations are studied Other titles in this series include *Nonlinear Effects in Metals in the Microwave Band* The Polarization Properties of Liquid Crystals and X ray and Electron Diffraction Study of Langmuir Blodgett Films X-Ray and Electron-Diffraction Study of Langmuir-Blodgett Films L. A. Feigin, Yu. M. Lvov, V. I. Troitsky, 1989 Discusses the advances in methods of research into the structure of Langmuir Blodgett multilayers and films with the predetermined alternation of molecular layers Also included are the structural analysis of films on substrates the diffraction effects associated with very thin films and news on the latest method of determining the packing of molecules in monomolecular layers **Polarization Properties of Liquid Crystals** S. A. Pikin, M. A. Osipov, E. M. Terent'ev, 1989 This volume presents the theoretical investigations of the polarization properties of liquid crystals It describes induced polarized structures and the effects which result from the interaction between the spontaneous or induced polarization and orientational non uniformities in the media Section 2 presents the phenomenological theory of ferroelectricity in smectic C liquid crystals a symmetry analysis a discussion on free energy and a description of some effects reflecting the influence of the boundaries and external forces Sections 3 and 4 focus on the molecular statistical theory of polarizational properties **Spin Supercurrent and Magnetic Relaxation in Helium-3** A. S. Borovik-Romanov, 1990 The results of experiments in which magnetization transfer at a considerable distance in ^3He B the flow of spin current along a capillary due to a gradient in the phase of the order parameter and phase slippage when a critical value of the current is reached are observed **Dynamics Of Planetary Rings And The Prediction Of New Uranian Satellites** A. M. Fridman, N. N. Gor'kavyy, 1989 **Additional Symmetries and Exactly Solvable Models in Two Dimensional Conformal Field Theory** S. L. Lukyanov, V. A. Fateev, 1991 Physics Reviews A. M. Dyugaev, 1991 **Spin Glasses and Related Problems** V. S. Dotsenko, M. V. Feigel'man, L. B. Ioffe, 1990 Three scientists from the L D Landau Institute of Theoretical Physics Moscow review recent developments in the theory of spin glasses and related strongly disordered systems They discuss in particular the problems of irreversibility and nonergodicity in the framework of the mean field theory a phase transition in three dimensional spin glasses and glass like systems with hidden correlations Addressed to researchers in theoretical physics Book club price 59 Annotation copyrighted by Book News Inc Portland OR X-Ray Diffraction Study of Nematic Smectic A and C Liquid Crystals B. I. Ostrovskii, 1989 Reviews recent studies of X ray scattering phenomena in liquid crystals in particular their relationship to phase transition physics Also explored are the main

approximations which are used to obtain structural information from the scattering spectre of liquid crystals and to determine the short range order in the molecule arrangement

The Third Binational USA USSR Symposium titled Laser Optics of Condensed Matter was held in Leningrad 1 June 5 June 1987 This volume contains the full text of 64 papers presented at or prepared for the Symposium in both plenary and poster sessions This Symposium reestablished the very productive series of Light Scattering Binational Symposia which were initiated in Moscow in 1975 Unfortunately there was an eight year hiatus following the Second Symposium in New York 1979 This interval caused by serious chilling of the climate of USA USSR collaboration deprived the active scientists on both sides of the opportunity to meet and interact in the active format of a conference During this eight year interval there has been very rapid and intense development of scientific activity in the general area of laser optics phenomena The development of ultrafast laser sources has permitted rapid advances in time resolved spectroscopy and ultrafast processes the field of optical bistability and strong nonlinearity became a hot topic and intense work is now underway to clarify ideas of photon localization These new developments complement many advances in the study of low dimensional systems such as surfaces new work on phase transitions and novel studies of elementary excitations such as polariton excitons in localized environments such as quantum wells and heterojunctions
