Magnetosphere The High Latitude Ionosph:

The Magnetosphere, the High Latitude Ionosphere and Their Interactions G. Benyon, Robert Boyd, S. W. H. Cowley, M. J. Rycroft, 1990-03 Recent research into solar terrestrial physics shows that the solar wind magnetosphere ionosphere and upper atmosphere form a closely coupled system In this volume many of the world's most distinguished atmospheric scientists describe the theoretical basis of this interaction and use the latest results from the AMPTE Viking and other satellites to shed more light on this in the polar regions Researchers in climatology meteorology and atmospheric physics will find this book of great interest *Space Weather Study Using Multipoint Techniques* L.-H. Lyu, 2002-05-08 Magnetic storms may cause damage to satellites radiation hazard to astronauts disruption of radio communications and interruption of ground electric power lines Space weather prediction becomes an important issue to be addressed in the twenty first century International Solar Terrestrial Program ISTP employs five satellites to probe the solar wind and magnetosphere providing valuable information for space weather prediction The Asia Pacific region is becoming one of the economic centers in the world The continuous drive for scientific and technological progress in parallel is evidenced by the establishment of many space research organizations in many countries of this area In Taiwan the National Space Program Office NSPO established her third satellite program COSMIC Constellation Observing Systems for Meteorology Ionosphere and Climate which is a science experiment to demonstrate the utility of atmospheric radio limb soundings from a constellation of six low earth orbiting satellites in operational weather prediction space weather monitoring and climate monitoring and research In order to provide a forum to discuss the many new results in this rapid moving field and to forge international collaborations a three day COSPAR Colloquium on Space Weather Study Using Multipoint Techniques was held This colloquium have provided a forum for experts from the international community to present new results on the timely topic space weather

Magnetosphere-Ionosphere Coupling Y. Kamide, Wolfgang Baumjohann, 2012-12-06 In the past two decades a succession of direct observations by satellites and of extensive computer simulations has led to the realization that the polar ionosphere plays a principal role in large scale magnetospheric processes a manifestation of the physics linkage involved in solar terrestrial interactions Spatial temporal variations in high latitude electromagnetic phenomena such as dynamic aurorae electric fields and currents have proved to be extremely complex Now the challenge is to comprehend the vast amount of complicated measurements made in this magnetosphere ionosphere system of the Earth This book addresses the electrical coupling between the hot but dilute magnetospheric plasma and the cold but dense plasma in the ionosphere In five major chapters this book presents basic properties of magnetosphere ionosphere coupling morphology of electric fields and currents at high latitudes global modeling of magnetosphere ionosphere coupling modeling of ionospheric electrodynamics current issues such as auroral particle acceleration substorms penetration of high latitude fields into low latitudes

High-Latitude Space Plasma Physics Bengt Hultqvist, 2012-12-06 Nobel symposium No 54 on High Latitude

Magnetospheric Iono spheric Plasma Physics was organized in Kiruna Sweden on March 22 25 1982 by Kiruna Geophysical Institute and EISCAT Scientific Association Some 50 leading experts from Western Europe America and USSR were invited to the Symposium One main purpose of the Symposium was to prepare for the intense European research effort in space plasma physics in the middle 1980 s in which the EISCAT facilities and the Swedish satellite Viking are two of the more important constituents The programme of the symposium was tied to the physics of those regions of near space where EISCAT and Viking are expected to provide important new observational results This is rather well covered by the title of these proceedings High Latitude Space Plasma Physics The first two sessions dealt with the physics of the high latitude ionosphere and the third one with how this part of near space is affected by the properties of the solar wind and the interplanetary magnetic field The remaining three sessions covered fairly extensively the high latitude magnetospheric physics at altitudes of 1 2 earth radii which is the main scientific object of the Viking project The Programme Committee of the Kiruna Nobel Symposium was composed of the following European scientists P Bauer Issy les Moulineaux R Bostrom Uppsala C G Falthammar Stockholm T Hagfors Kiruna Cochairman O Holt Tromsø B Hultqvist Kiruna Cochairman H Kohl Lindau J Oksman Oulu H Rishbeth Chilton and L Stenflo Ume

Plasma Sources of Solar System Magnetospheres Andrew F.

Nagy, Michel Blanc, Charles Chappell, Norbert Krupp, 2016-01-27 This volume reviews what we know of the corresponding plasma source for each intrinsically magnetized planet Plasma sources fall essentially in three categories the solar wind the ionosphere both prevalent on Earth and the satellite related sources Throughout the text the case of each planet is described including the characteristics chemical composition and intensity of each source The authors also describe how the plasma generated at the source regions is transported to populate the magnetosphere and how it is later lost To summarize the dominant sources are found to be the solar wind and sputtered surface ions at Mercury the solar wind and ionosphere at Earth the relative importance of the two being discussed in a specific introductory chapter Io at Jupiter and a big surprise of the Cassini findings Enceladus at Saturn The situation for Uranus and Neptune which were investigated by only one flyby each is still open and requires further studies and exploration In the final chapter the book offers a summary of the little we know of Uranus and Neptune then summarizes in a comparative way what we know of plasma sources throughout the solar system and proposes directions for future research
