more experimental studies in mathematics education Fuzzy Business Dr Steve Morlidge, 2025-12-31 This is a draft copy of a book posted for review purposes only. Our recent scientific advances as a species are the result of more precise facts and knowledge of more and more things. But this precision is both a strength and a weakness because it is based on a monochrome perspective where things are either black and white, true or false. We know from our personal experience at home and in our working lives that most of what we deal with is not precise. It is imprecise and fuzzy, made up of shades or grey. Sometimes this is because we don't have the time or the instruments needed to collect data and be more precise, but often precision doesn't matter for the kind of decisions we need to make. But there are many things that are impossible to measure precisely, such as thoughts, feelings, and opinions, and others like any forecast of the future where we can be precise but we know we will be wrong. We have few tools to help us navigate through this realm of imprecision and fuzziness, so we have to fall back on judgement. The good news is that our brains have evolved to handle messy real world data; indeed, this is the only form of data we have had for most of our existence. The bad news is that our brains often fail when we ask it to solve the sort of problems that our Palaeolithic ancestors never had to face, which includes most of what we do at work. We also have no way of surfacing the assumptions behind our judgement in a way that helps us work collaboratively. This book explains ideas and concepts designed to help us manage better in the world as it really is: messy, imprecise, uncertain, and ambiguous. In other words, how to be roughly right rather than precisely wrong. The key concept of fuzzy sets has been around for over 50 years and is embedded in the technology that controls household devices we use every day, such as cameras, smart cookers, and automatic gearboxes. These applications demonstrate that this is a set of serious ideas with powerful practical applications. But these devices represent the most sophisticated and complex uses to which these ideas can be put. This book tackles the other end of this spectrum and shows how fuzzy sets can be used to help tackle common place business problems of the sort that we encounter everyday, simple enough to be applied using pen and paper or crude spreadsheets and without the need for any mathematical training. Although the primary audience for this book is practical business people, it will also be of interest to the intellectually curious general reader because it forces us to question the nature of reality that most of us take for granted. For example, it starts by offering a solution to the Sorites paradox, which continues to baffle people two millennia after it was first stated. It goes like this: If 100 stones make a heap, when we take away one, is it still a heap? What if we take away another and another and so on? Intrigued? Read on.

Inventing the Mathematician Sara N. Hottinger, 2016-03-01 Where and how do we as a culture get our ideas about mathematics and about who can engage with mathematical knowledge Sara N Hottinger uses a cultural studies approach to address how our ideas about mathematics shape our individual and cultural relationship to the field She considers four locations in which representations of mathematics contribute to our cultural understanding of mathematics mathematics textbooks the history of mathematics portraits of mathematicians and the field of ethnomathematics Hottinger examines how these discourses shape mathematical subjectivity by limiting the way some groups including women and people of color are able to see themselves as practitioners of math Inventing the Mathematician provides a blueprint for how to engage in a deconstructive project revealing the limited and problematic nature of the normative construction of mathematical subjectivity

Conceptualising Integration in CLIL and Multilingual Education Tarja Nikula, Emma Dafouz, Pat Moore, Ute Smit, 2016-08-18 Content and Language Integrated Learning CLIL is a form of education that combines language and content learning objectives a shared concern with other models of bilingual education While CLIL research has often addressed learning outcomes this volume focuses on how integration can be conceptualised and investigated Using different theoretical and methodological approaches ranging from socioconstructivist learning theories to systemic functional linguistics the book explores three intersecting perspectives on integration concerning curriculum and pedagogic planning participant perceptions and classroom practices The ensuing multidimensionality highlights that in the inherent connectedness of content and language various institutional pedagogical and personal aspects of integration also need to be considered

and Lecture Notes in Logic series have published seminal works by leading logicians. Many of the original books in the series have been unavailable for years but they are now in print once again. This volume, the nineteenth publication in the Lecture Notes in Logic series, collects the proceedings of the European Summer Meeting of the Association for Symbolic Logic held in Paris, France, in July 2000. This meeting marked the centennial anniversary of Hilbert's famous lecture and was held in the same hall at La Sorbonne where Hilbert presented his problems. Three long articles based on tutorials given at the meeting present accessible expositions of developing research in model theory, computability, and set theory. The eleven subsequent papers present work from the research frontier in all areas of mathematical logic.

Academic Success And Social Power
Richard Teese, 2013-04-18

A most significant text that says something new about how student achievement is shaped. Richard Teese cuts across much of the recent talk about reform and allows us to think about the issues afresh. His findings will fascinate all. Professor Simon Marginson, Monash University.

This eye-opening study of Australian secondary education looks beyond clichés about excellence to analyse the historically specific nature of the scholarly ideal against which successive generations of Australian students have been judged. Drawing on a wealth of strikingly original research, Richard Teese offers a penetrating analysis of Victorian secondary schooling in the half century after World War Two. This was a era in which higher secondary schooling ceased to be the preserve of an elite and emerged as a system of mass education. It was also a period marked by successive waves of reform in curriculum and assessment. Yet at the end of it all, Australians have been left with a sharply polarised system of schooling in which the most economically vulnerable populations of young people are also those most at risk of educational failure. This book asks the hard questions: Are our systems of secondary teaching and the expectations they place on students anachronistic in an age of mass education? How far is the curriculum itself responsible for the manifest disparities in achievement between sectors and regions and between boys and girls? What has been the universities' role in the process of reform and counter reform? And what have all these upheavals implied for the practice of teaching?
