**The Token Economy** Alan Kazdin, 2012-12-06

Applications of operant techniques in treatment and education have proliferated in recent years. Among the various techniques, the token economy has been particularly popular. The token economy has been extended to many populations included in psychiatry, clinical psychology, education, and the mental health fields in general. Of course, merely because a technique is applied widely does not necessarily argue for its efficacy. Yet the token economy has been extensively researched. The main purpose of this book is to review, elaborate, and evaluate critically research bearing on the token economy. The book examines several features of the token economy, including the variables that contribute to its efficacy, the accomplishments, limitations, and potential weaknesses, and recent advances. Because the token economy literature is vast, the book encompasses programs in diverse treatment, rehabilitation, and educational settings across a wide range of populations and behaviors. Within the last few years, a small number of books on token economies have appeared. Each of these books describes a particular token economy in one treatment setting, details practical problems encountered, and provides suggestions for administering the program. This focus is important but neglects the extensive scholarly research on token economies. The present book reviews research across diverse settings and clients. Actually, this focus is quite relevant for implementing token economies because the research reveals those aspects and treatment variations that contribute to or enhance client performance.

**Handbook of Behavior Modification with the Mentally Retarded** J. L. Matson, 2013-03-14. Mental retardation has probably existed for as long as mankind has inhabited the earth. References to seemingly retarded persons appear in Greek and Roman literature. Examination of Egyptian mummies suggests that some may have suffered from diseases associated with mental retardation. Mohammed advocated feeding and housing those without reason. There is other evidence for favorable attitudes toward the retarded in early history, but attitudes varied from age to age and from country to country. The concept of remediation did

not emerge until the nineteenth century Earlier in 1798 Itard published an account of his attempt to train the wild boy of Aveyron A rash of efforts to habilitate retarded persons followed Training schools were developed in Europe and the United States in the 1800s however these early schools did not fulfill their promise and by the end of the nineteenth century large inhumane warehouses for retarded persons existed The notion of habilitation through training had largely been abandoned and was not to reappear until after World War II
