R. W. BOSS RUSSELL

Pathology of Peripheral Nerves By R. O. Weller and J. Cervós-Navarro. (Pp. 225; illustrated; £13.50.) Butterworths: London and Boston, 1977. This book attempts to fill a loophole between the works on neuropathology and muscle pathology, and deals, in the middle third of its 214 pages, with general pathology of peripheral nerve and the pathology of peripheral nerve diseases. This has been no easy task for it is difficult to think of the nerves in disease without considering their cell bodies, synapses, and specialised endings. Where necessary, brief references are made to these matters while concentrating on the results of biopsy or necropsy studies of nerves. The technique of sural nerve biopsy and the ruinous consequences of inept handling are described. The laboratory work is not dealt with in detail but each technique is covered by references to original descriptions or standard laboratory technical books.

For the majority of those who would be attracted by the title of this book the technical section may seem unrewarding and the final third of the book, devoted to descriptions of tumour pathology which are available elsewhere, may seem unbalanced.

This volume is highly priced for what it yields, but it will probably be welcomed by laboratories with neurological interests because it brings together many references to widely scattered old and very new work on axonal injury, regeneration, "dying-back", myelination, dysmyelination nodes and internodes, and Schwann cell biology.

DAVID DOYLE

Multiple Sclerosis—A Critical Conspectus Edited by E. J. Field. (Pp. 265; illustrated; £9.95.) MTP Press: Lancaster, 1977.

The stated purpose of this small, multi-authored book is to highlight "the shortcomings of our approaches" to the study of multiple sclerosis, to help the general physician understand why

neurologists have failed to solve the problem, and to direct the attention of young neurobiologists towards this illness. Unfortunately, our ignorance of multiple sclerosis is still all too apparent and, with so many excellent monographs and publications on the subject available, I cannot see why this book was produced. Most of the experimental virological and immunological data given are highly controversial and would not be accepted by the majority of established workers in the field. I find the clinical account poor, since it adds nothing and tends towards the anecdotal. The research worker will not require this book, the clinician unaware of the existing controversies will be confused by it, and the novice will be misled. I cannot recommend it.

PETER O. BEHAN

Remembering Henry Edited by Stephen Lock and Heather Windle. (Pp. 166; £3.00.) British Medical Association: London, 1977.

THE GREAT CHAM

Portrait painters as opposed to mere photographers inevitably incorporate into their works the fundamental features of their own personalities. Most Johnsonians discern in Boswell's "Life" of his great master all the elements of the writer's own character. This present collection of written portraits, engagingly assembled by Stephen Lock and Heather Windle, has produced a distillate, at once fascinating and charming, of the subtle emotional and intellectual forces at work between the subject and the authors. It is truly a homely *Festschrift* (how Henry himself would have castigated that turgid term!), for this splendid volume, dedicated to the memory of a remarkable ornament of the neurological and academic scene, recalls vividly to those who knew him, and evokes for those whose misfortune was not to have done so, all the charisma of a unique personality. The enterprise, whether by design or happy accident, succeeds beyond expectation, for each contribution springs from the special relationship established between each of the writers and their mutual subject, and so creates a true hologrammatic image of a man whom they (and we) knew and cherished. The contributions range from the austere, and not always uncritical, appreciation through personal devotion

and at times justifiable frank idolatry. It would be invidious to select an particular section for special mention. Suffice it to say that all are eminent, readable and occasionally quite uproarious.

The three final sections of the monograph are selections from Henry's own writing—his account of accident neurosis, his essay on medical education entitled "Fifty years after Flexner", an finally that devastating broadside fire in response to what one can only assume to be a wilful masochist invitation to the World Psychiatric Symposium of 1969 and entitled "Psychiatry—medicine or magic?"

If you have not already bought this book, send a minion out at once to collect it. It will please you too.

Multiple Sclerosis A Critical Conspectus:

Multiple Sclerosis E.J. Field, 2012-12-06 Although a strikingly modern account of multiple disseminated sclerosis was given by Charcot more than one hundred years ago we are still not sure of the precise nature of the disease still less of any precise mode of management Even diagnosis is at best probable This collection of essays examines the particular difficulties which beset the problem and have militated against the solution problems of data collection and evaluation clinical and biochemical vagaries and unanswered questions laboratory test prediction of the disease etc Experts in their fields have set out the difficulties and way forward as they see them and there must necessarily be overlap or contradictions which underline our lack of knowledge Clearly no attempt can be made to cover more than a very few aspects of the problem a further volume is planned to review other areas not covered here in particular the relationship between multiple sclerosis and experimental allergic encephalo myelitis but it is hoped that the softness of much of the data we have to work upon will become apparent It is intended that this volume should clearly differ from the large number of monographs and reports of symposia dedicated to multiple sclerosis in bringing out the shortcomings of our approaches and in some respects our naiveties rather than our individual brilliancies

Ann Sawyer, Judith Bachrach, 2007-09-20 More than half a million people live with multiple sclerosis yet conventional medicine still has little to offer patients There is no known cure and even recent breakthroughs in drug therapy do not work to control many of the symptoms or promise any degree of recovery But there is an alternative to drugs that can stop and

reverse the ravaging symptoms of MS the MS Recovery Diet As this book explains there are five common food triggers that can set off the symptoms of MS dairy grains containing glutens legumes eggs and yeast Yet because MS is such a complex disease other foods play a role as culprits or aides The MS Recovery Diet explains the background science and development of this treatment in one source for the first time and shows readers how to pinpoint their specific problem foods and sensitivities It also offers more than one hundred simple recipes as well as strategies to improve digestion balance the immune system and repair the body s myelin crucial steps toward healing the body Both of the authors Ann D Sawyer and Judith E Bachrach who had been diagnosed and disabled by multiple sclerosis have experienced incredible recovery on the diet Within the first three months on this program Sawyer was able to stop the disease progression and begin to walk short distances with an even gait Bachrach whose health has been declining because of MS for thirty eight years regained feeling in her toes in one week and after one year on the diet has stopped taking all medication This book shares the treatment plan that has dramatically changed their lives and the lives of others who have discovered it With inspiring personal stories throughout it offers real help and hope for sufferers of MS *Humoral Immunity in Neurological Diseases* D.

Progress in Multiple Sclerosis Research H.J. Bauer, S. Poser, G. Ritter, 2012-12-06. At the annual meetings of the International Federation of Multiple Sclerosis Societies (IFMSS), the representatives of the national MS societies of numerous countries assemble for discussions and reports on work accomplished under way and to be undertaken in the future. In addition to publicity work, education and patient services, there has been an increasing interest in obtaining first hand reliable and realistic information not only on the medical problems relevant to diagnosis, treatment and the management of MS but also on progress in the difficult field of MS research. For this purpose, the International Medical Advisory Board (IMAB) was founded. In the past years, its members have organized a number of symposia in conjunction with the IFMSS meetings in New York, Copenhagen, Barcelona, Toronto, Amsterdam. The program of the Göttingen symposium, relevant in its focus to the 1978 meeting of the IFMSS in Hannover, had the double purpose of bringing together scientists from many countries with active MS societies and to inform the organizers and members of these societies and thereby also the MS patients of problems and progress in a number of areas of MS research. The program was conceived as a survey of newer work undertaken in basic and experimental MS research and on the clinical side as a reassessment of the prerequisites in the diagnosis of MS, the value of laboratory tests, some therapeutic approaches and organizational principles in the management of MS.
