The Olive Landscapes of the Mediterranean José Muñoz-Rojas,Roberto García-Ruiz,2024-12-13 This book provides a state of the art review of the current models and typologies of olive landscapes and related farming systems in the Mediterranean It also explores potential prospects for monitoring and enhancing their sustainability standards Olive groves are an essential component of the historical landscape that largely drive the cultural ecological and socio economic character of the region Agronomic intensification and mechanization market globalization and delocalization and financialization are affecting these

ancient farming systems in certain olive landscapes whereas others are threatened by abandonment and financial loss This complex set of processes is resulting in a heterogeneous mosaic of olive landscapes when examined across nested spatial temporal scales and institutional levels In alignment with such complexity multiple challenges are arising linked to sustainability standards and targets Sustainability has actually been the subject of much public discussion and yet of not nearly enough scientific evidence gathering that is both robust and comparable across geographic contexts and scales This is where this book is expected to provide a meaningful contribution Ultimately the main objective of this book is to establish a base line sustainability picture of the complex mosaic of olive landscapes across the Mediterranean region The book is structured along a series of national regional and thematic reviews and syntheses which lead to joined up reflections on current and future challenges opportunities and trajectories for enhancing the sustainability of olive landscapes across the Mediterranean The book will be of interest to academics and researchers policy makers the farming community and market agents alike We expect that they will find in this book an overall picture of the sector s current situation and plausible pathways for achieving enhanced sustainability standards whilst also permitting the reader to gain depth on the contingent characteristics of the different drivers components and typologies of these dynamic and valuable landscapes World Trends in Major Oil Crops United States.
