Collision Course John Nelson, 2007-12-15 An asteroid hitting Earth may sound like science fiction but it is a real danger This book explores what the different scenarios might be and how we can prepare ourselves in case such a disaster should occur

Collision Course! Fred Bortz, 2014-06-30 Bortz takes readers on a whirlwind tour of the origins of the universe the impact of comets and asteroids on the history of the Earth and the Moon what we have learned from current research about these space rocks and what we might expect in the future Newly updated in 2014 to include the 2013 Chelyabinsk meteorite as well as the latest technological developments

Defending Planet Earth National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee to Review Near-Earth-Object Surveys and Hazard Mitigation Strategies, 2010-06-21 The United States spends approximately 4 million each year searching for near Earth objects NEOs The objective is to detect those that may collide with Earth The majority of this funding supports the operation of several observatories that scan the sky searching for NEOs This however is insufficient in detecting the majority of NEOs that may present a tangible threat to humanity A significantly smaller amount of funding supports ways to protect the Earth from such a potential collision or mitigation In 2005 a Congressional mandate called for NASA to detect 90 percent of NEOs with diameters of 140 meters or greater by 2020 Defending Planet Earth Near Earth Object Surveys and Hazard Mitigation Strategies identifies the need for detection of objects as small as 30 to 50 meters as these can be highly destructive The book explores four main types of mitigation including civil defense slow push or pull methods kinetic impactors and nuclear explosions It also asserts that responding effectively to hazards posed by NEOs requires national and international cooperation Defending Planet Earth Near Earth Object Surveys and Hazard Mitigation Strategies is a useful guide for scientists astronomers policy makers and engineers

Apocalypse Dan Martin, 2011-05 Will the world as we know it end in our time It s the intention of this book to teach you what you ll need to know IF it does Spiritual scientific predictions asteroid impacts pandemics economical governmental collapse solar flares electrical grid failure climate change epic floods WW3 Planet X peak oil super tsunamis alien invasions how the government s preparing this book has it all and teaches how you and your family can survive it all A complete self help guide not only for the end times but any global crises of which we seem to be having plenty of lately Written by a retired Boeing Aerospace Technician who lived six years 100% self sufficient and cut off from society Dan Martin presents eye opening views of humanity and his insights into possible future events are breath taking to say the least The book makes you wonder is the end closer than we think Are any of us really prepared

Not From Earth Robert Adamson, 2023-09-19 The saga of the alien hybrid James Ripley continues in volume 2 of the series The hybrid alien is Earth s last hope to stop a 93

mile wide comet on a collision course with Earth The aliens sent James to Earth as an infant to grow witness and record Earth s final chapter not to save the Earth But James rebels and decides to fight for Earth despite all its faults In this hard core SciFi James a computer programmer struggles with AI and quantum mechanics to devise a plan using Quantum Tunneling The ending is a high tech mind bender that expands far beyond the planet killing Comet

Hazards Due to Comets and Asteroids Tom Gehrels,2021-11-30 In 1993 the U S Department of Defense declassified information dealing with frequent explosions in the upper atmosphere caused by meteoric impact It is estimated that impacts have occurred of a magnitude equivalent to the atomic bomb detonated at Hiroshima Not all such space voyagers meet their end in the atmosphere however huge craters attest to the bombardment of earth over millions of years and a major impact may have resulted in the extinction of dinosaurs An impact in Siberia near the beginning of this century proves that such events are not confined to geologic time Hazards Due to Comets and Asteroids marks a significant step in the attempt to come to grips with the threats posed by such phenomena It brings together more than one hundred scientists from around the world who draw on observational and theoretical research to focus on the technical problems related to all aspects of dealing with these hazards searching for and identifying hazardous comets and asteroids describing their statistics and characteristics intercepting and altering the orbits of dangerous objects and applying existent technologies rocket boosters rendezvous and soft landing techniques instrumentation to such missions The book considers defensive options for diverting or disrupting an approaching body including solar sails kinetic energy impacts nuclear explosives robotic mass drivers and various propulsion systems A cataclysmic impact posing a threat to life on Earth is a possibility that tomorrow s technology is capable of averting This book examines in depth the reality of the threat and proposes practical measures that can be initiated now should we ever need to deal with it

Atlantis in America Ivar Zapp,George Erikson,1998 This text presents evidence for a new theory that the great stone spheres of Costa Rica and sighting stones throughout the Pacific were used to teach sea routes and constellation paths to navigators of the ancient world It reveals substantial links between Meso America and Egypt and the Middle East

Macro-Engineering and the Earth U W Kitzinger,E G Frankel,1998-11-01 This work delivers ideas comments and projects on energy communications transport management human resources and financial and legal issues which macroengineering can contribute towards the solution of the Earth s environmental problems Some 20 engineers and scholars identify problems in the next century whose solutions call for international policy planning and a more collaborative peaceful and prosperous world order Imaginative concepts employ forward thinking for applying technology in revolutionary projects The book presents results of research on a triple helical turbine capable of extracting vast amounts of energy from slow moving water an invention which could harness rivers and ocean currents rendering high dams with their political social and ecological implications redundant

These turbines are already in mass production in the USA for use in the Gulf Stream to produce energy and hydrogen fuel and can also be used to harness power from the wind Another project for which the technology is already available will harvest solar energy by satellites stationed beyond our atmosphere and beam it to the Earth and yet another calls for planetary defence of Earth against asteroid collisions The environmental section discusses large projects for changing our climate planning and costing for a sub Mediterranean aqueduct connecting the River Rhone in France with Algeria and plans for intensive fish farming of the oceans The role of satellites includes telemedicine and there are Swiss plans for further tunnelling through the Alps Project management sections include the formation of a military civilian conservation corps financial and legal issues macro projects in China and a forecast of 21st century macro problems Delivers ideas comments and projects on energy communications transport management human resources and financial and legal issues which macroengineering can contribute to the solution of the Earth s environmental problems Identifies problems in the next century whose solutions call for international policy planning and a more collaborative peaceful and prosperous world order Presents research on a triple helical turbine capable of extracting vast amounts of energy from slow moving water The Spaceguard Survey: Report of the NASA International Near-Earth-Object Detection Workshop David Morrison,1992 **The Handy Geology Answer Book** Patricia Barnes-Svarney,Thomas E Svarney,2004-02-01 Answers hundreds of questions on the most interesting of topics planet Earth It s right under our feet every day Earth and all its glorious components From fossils rocks and minerals to caves earthquakes and volcanic eruptions The Handy Geology Answer Book traces the formation of the universe and the planet investigating the layers of the planet and explaining the formation of mountains and bodies of water Questions and answers are also devoted to physical and chemical processes fossil fuels the effects of global warming on glaciers world morphological features and even the geology of other planets It answers nearly 1 000 of the most frequently asked questions on the complexities that shaped our planet It is also a trivia buff s delight with the stats for Earth s deepest the Mariana the deepest known ocean trench lowest the shoreline of the Dead Sea highest Mt Everest the longest river the Nile and the largest freshwater lake Lake Superior along with the how and why of these features Easy to understand and use The Handy Geology Answer Book is invaluable for students and general science readers of all ages With numerous photos and illustrations this informative book also includes a resource section on educational places government organizations and other references a helpful bibliography an extensive index and a glossary of terms adding to its usefulness From the microscopic formation of crystals to the titanic eons long processes that result in islands volcanoes mountains glaciers oceans continents and even planets you ll learn about the events that created today s world and the changes that continue to affect Earth every day Impact! Elizabeth Rusch,2017 Asteroids come in all shapes and sizes and hit our planet in them too But what happens if a catastrophically large one approaches earth By looking on the ground at historical asteroid craters and present day falls and up into space for the big ones yet to come a wide variety of scientists are trying to figure

out how to track asteroids and how to avoid devastating impacts in the future *Mayan Calendar Prophecies: Predictions for 2012-2052* Gary C. Daniels, 2012-11-01 Take a look at the science behind the Mayan calendar prophecies and mythology The Maya believed multiple cycles governed civilization They created various calendars to track these cycles Their short count calendar tracked a 256 year cycle believed to control epidemics famines warfare and more Scientists have found a 250 year solar cycle that also appears to affect epidemics famines warfare and more Their long count calendar tracked a 5000 year cycle related to natural disasters and cosmic catastrophes Scientists have also discovered that the Earth is subjected to periodic bombardment by comets and asteroids that plunges the world into long periods of darkness and cold Mayan mythology appears to record such events and in some instances even the exact dates on which these catastrophes occurred in the past By comparing these dates with ice core records sedimentary records and climate records this book reveals the truth about civilization s darkest days And what may lie ahead in the future **The Second Coming** David L. Toney, 2025-02-12 The about the book information is not available at the moment **Landforms of the World with Google Earth** Anja M. Scheffers, Simon M. May, Dieter H. Kelletat, 2015-03-11 This book of phenomenal illustrations provides a wealth of visual information on the wide variety of landform processes over all latitudes climates and geological time scales It invites you to observe the surface of planet Earth to appreciate its astonishing beauty and to explore scientific explanations for the form of our landscapes 250 full colour images from Google Earth enable all types of terrestrial environments and landforms to be appreciated at a glance Images are explained with scales coordinates explanatory text and references making the landform processes active on our globe easy for the reader to comprehend See the effects of both sudden and slow forming agents such as the impact of a comet or meteorite and erosion and deposition processes through wind flowing water creeping glacier ice or frost in the ground Appreciate how landscapes are shaped by processes such as weathering transport and erosion and how that erosion enables us to look into endogenic processes those within the Earth s crust called tectonics These images and the processes that they document show that continents are shifting mountains are uplifting and ocean bottoms may sink deeper This collection will appeal to everyone researchers students and non experts alike can take inspiration from these images which bring the landforms of the world to life The scientific discipline of geomorphology becomes accessible through the fascinating insights that these clear well explained images allow *SITE 39, BLUE ORB* Otis V Goodwin III, 2010-03-19 Upon completion of the first Site 39 novel the author faced a dilemma The newlyweds Ethan and Laine couldn t simply be left living in perpetual wedded bliss The Site 39 computer itself provided the answer There was another lurking threat In Site 39 Blue Orb Ethan Laine and their friends are off to the center of the Galaxy to solve the mystery surrounding the cause of the disastrous destruction on Earth 5 000 years ago and to prevent history from repeating itself **Cosmic Calamities: The Perils of Asteroids and Comets** Pasquale De Marco, 2025-07-07 In the vast expanse of the cosmos celestial wanderers pose a constant threat to our planet Asteroids and comets remnants of the solar system s

formation can impact Earth with devastating consequences This book delves into the nature of these cosmic hazards exploring their origins impact frequency and the catastrophic effects they can inflict From the extinction of the dinosaurs to the Tunguska and Chelyabinsk events we examine the historical record of impacts and the invaluable lessons they have taught us We investigate the formation and distribution of impact craters providing insights into the geological processes that have shaped our planet The threat of a major impact remains a sobering reality and this book assesses the probability and potential consequences of such an event We explore the challenges and complexities of impact defense discussing the methods of detection deflection and international cooperation that are essential for safeguarding our future The discovery and tracking of near Earth objects are crucial to mitigating the impact hazard We delve into the tireless efforts of astronomers and scientists who search the skies for these celestial interlopers providing an overview of the technologies and strategies employed in this vital endeavor The human response to impacts is a multifaceted phenomenon involving psychological social economic political and cultural dimensions We examine the ways in which communities have coped with past impacts and the lessons we can learn from their experiences As we continue to unravel the mysteries of the cosmos the study of asteroids and comets becomes increasingly imperative By understanding the nature of these cosmic hazards we gain invaluable knowledge that empowers us to prepare for and potentially mitigate their devastating effects This book serves as a comprehensive resource providing a deep dive into the science history and implications of cosmic impacts offering essential insights for scientists policymakers and the general public alike If you like this book write a review on google books

Congressional Record , **The Cycle of Cosmic Catastrophes** Richard Firestone,Allen West,Simon Warwick-Smith,2006-06-05 Scientific proof validating the legends and myths of ancient floods fires and weather extremes Presents scientific evidence revealing the cause of the end of the last ice age and the cycles of geological events and species extinctions that followed Connects physical data to the dramatic earth changes recounted in oral traditions around the world Describes the impending danger from a continuing cycle of catastrophes and extinctions There are a number of puzzling mysteries in the history of Earth that have yet to be satisfactorily explained by mainstream science the extinction of the dinosaurs the vanishing of ancient Indian tribes the formation of the mysterious Carolina Bays the disappearance of the mammoths the sudden ending of the last Ice Age and the cause of huge underwater landslides that sent massive tsunamis racing across the oceans millennia ago Eyewitness accounts of these events are chronicled in rich oral traditions handed down through generations of native peoples The authors recent scientific discoveries link all these events to a single cause In **The Cycle of Cosmic Catastrophes** Richard Firestone Allen West and Simon Warwick Smith present scientific evidence about a series of prehistoric cosmic events that explains why the last Ice Age ended so abruptly Their findings validate the ubiquitous legends and myths of floods fires and weather extremes passed down by our ancestors and show how these legendary events relate to each other Their findings also support the idea that we are entering a thousand year cycle of

increasing danger and possibly a new cycle of extinctions
