Aging in the Designed Environment Margaret Christenson, Ellen D Taira,2014-04-08 Aging in the Designed Environment is the key sourcebook for physical and occupational therapists developing and implementing environmental designs for the aging The physical environment remains one of the most overlooked areas in environmental design In order to move beyond this status quo persons responsible for planning elderly environments must develop a new understanding of

ways in which their influence can improve the older adult's physical and mental functioning. Occupational and physical therapists as well as other health care professionals will benefit tremendously from the information presented in this unique volume. Designers, developers, and others with minimal health care background will also find a wealth of possibilities within *Aging in the Designed Environment*. Many concerns are dealt with in the book's five sections. The first section describes the implications that occur when there are changes in vision, hearing, taste, smell, touch, and the kinesthetic systems. Recommendations for environmental adaptation and modifications which may compensate for the changes in each of these systems are suggested. The second section stresses the relationship between behavior and environment. A variety of environmental attributes: comfort, privacy, accessibility, control, security, dignity, and their impacts are discussed along with information on ways that attributes can be incorporated into the living settings of older people. In section three, the focus is on the older person living independently in his or her own home, and section four covers exclusively the design and selection of chairs for older adults. New ways to assess and evaluate the home to promote independence beyond the traditional activities of daily living are addressed. The last section deals with redesigning the existing long-term care facility. The author examines some of the environmental conditions existing in specific facilities and provides recommendations to compensate for these circumstances. *NBS Building Science Series*, 1974. *Staircases* James W. P. Campbell, Michael

Tutton, 2013-11-07. The staircase dates back to the very beginning of architectural history. Virtually every significant building from the ziggurats of ancient Mesopotamia to the present day has not only contained one or more staircases but has celebrated them. For such an apparently simple part of a building, they have been made in a bewildering variety of forms and from a wide range of materials. Every age has sought to outperform the previous to produce ever more spectacular and gravity-defying designs. *Staircases: History, Repair, and Conservation* is the first major reference volume devoted entirely to the understanding of staircases and the issues surrounding their repair and conservation. Each chapter has been especially written by experts in their respective fields. The book is essential reading for professionals and anyone with an interest in staircases. It deals with the history, dating, archaeology, surveying, and recording, engineering, curating, repair, and conservation of the staircase in a single volume. No other book offers such a wide range of detail. The book is divided into three parts. Part 1 covers the history, development, identification, and dating of staircases, providing detailed drawings and photographs and an introduction to the scientific techniques available to enable the accurate dating of staircases. Part 2 covers the design, engineering, and maintenance of the staircase, giving a clear guide to the latest research into the design of safe staircases and their structural stability. Part 3 focuses on the materials commonly used to make stairs, detailing the appropriate techniques for their conservation and repair. The result is a comprehensive study encompassing considerable and far-reaching research which aims to inform our understanding and advance the scholarship of the subject for years to come. *Firefighting Operations in High-Rise and Standpipe-Equipped Buildings* David M. McGrail, 2007. This book establishes a proper

firefighting mindset and promotes maintaining preparedness for the extreme physical and mental demands of firefighting operations in high rise and standpipe equipped buildings Among the many valuable topics covered in this book are standpipe system pressure regulating devices pressure restricting devices and pressure reducing valves cautious and disciplined elevator use during high rise operations elevator rescue operations proper engine company suppression selection including techniques to operate more powerful firefighting weapons with limited manpower air support operations during high rise emergencies with or without an internal resource
