

A TALE OF TWO VILLAGES: BANDKERAMIK SOCIAL STRUCTURE

This fifth and final chapter draws together some lines of evidence to test a number of hypotheses on Bandkeramik social structure. The evidence (if one may call it that) is gathered from an analysis of decorated pottery from two LBK villages: the Dutch site of Elsloo, and the Bavarian site of Hienheim. The former has been extensively reported on in Modderman 1970; its graveyard was studied in some detail in the previous chapter; Hienheim, however, has only been partially described – and yet the present volume was originally conceived of as a monograph on the Neolithic pottery from that site.

The hypotheses to be tested against these data derive from two sources:

1. There is a pile of print dealing with the LBK, some of which is also concerned with its social aspect; from it, ideas can be collected which have been or are still to be tested in one form or another.
2. The study of the Elsloo cemetery reported on in Chapter IV has been written especially in view of generating hypotheses on LBK social structure.

From this, the contents of this chapter can be structured in the following way. In a short introduction (first section) I will signal some recent work on non-Bandkeramik, prehistoric, Neolithic social structure, just to provide a background. In the second section I will deal with some other studies explicitly discussing Bandkeramik social structure; I will also briefly summarize the “findings” of the previous chapter – together, these are the hypotheses to be tested. The third section is a very loosely structured one on method: several points are better presented separate from the evidence. They are mainly concerned with preliminary contemplations of the computer output to be inspected in the subsequent sections, especially the weight that should be accorded to the principal components analyses. Also, the subdivision into phases of the settlement data will be briefly treated there. The next two sections contain the confrontation of data and hypotheses; Elsloo and Hienheim are dealt with separately, and in that order. In both sections I will start with a short summary of what has been published on the site; then the statistical analyses will be presented, followed by a reflection on the second section’s contents. The sixth and final section comprises a listing of what has been tested and what has not, plus a number of unclaried problems; as such it should serve as a summary of this chapter.

1. *Introduction*

If the previous chapter has implicitly given an impression of being the first one of its kind, this is patently wrong. I would like to correct that picture by the presentation of an array of examples directly concerned with the establishment of prehistoric social structures.¹ I will present a few general

studies first, and then some on the more limited field of Neolithic archaeology, other than Bandkeramik. This is not and cannot be a synopsis; it is rather intended to give an impression of the state of the art insofar as it is relevant for the present study – therefore, it will be highly selective. Though most Neolithic studies touch upon both aspects, for ease of presentation they have been grouped under two
