## **On Measures Of Information And Their Characterizations:**

*On Measures of Information and Their Characterizations*, 1975

**Characterizations** Acze?l, 1975-12-17 This book deals with measures of information the most important ones being called entropies their properties and reciprocally with questions concerning which of these properties determine known measures of information and which are the most general formulas satisfying reasonable requirements on practical measures of information This is the first book investigating this subject in depth

**Handbook of Measure Theory** E. Pap, 2002-10-31 The main goal of this Handbook is to survey measure theory with its many different branches and its relations with other areas of mathematics Mostly aggregating many classical branches of measure theory the aim of the Handbook is also to cover new fields approaches and applications which support the idea of measure in a wider sense e.g. the ninth part of the Handbook Although chapters are written of surveys in the various areas they contain many special topics and challenging problems valuable for experts and rich sources of inspiration Mathematicians from other areas as well as physicists computer scientists engineers and econometrists will find useful results and powerful methods for their research The reader may find in the Handbook many close relations to other mathematical areas real analysis probability theory statistics ergodic theory functional analysis potential theory topology set theory geometry differential equations optimization variational analysis decision making and others The Handbook is a rich source of relevant references to articles books and lecture notes and it contains for the reader's convenience an extensive subject and author index

## **Handbook of Functional Equations**

Themistocles M. Rassias, 2014-11-21 This handbook consists of seventeen chapters written by eminent scientists from the international mathematical community who present important research works in the field of mathematical analysis and related subjects particularly in the Ulam stability theory of functional equations The book provides an insight into a large domain of research with emphasis to the discussion of several theories methods and problems in approximation theory analytic inequalities functional analysis computational algebra and applications The notion of stability of functional equations has its origins with S. M. Ulam who posed the fundamental problem for approximate homomorphisms in 1940 and with D. H. Hyers Th. M. Rassias who provided the first significant solutions for additive and linear mappings in 1941 and 1978 respectively During the last decade the notion of stability of functional equations has evolved into a very active domain of mathematical research with several applications of interdisciplinary nature The chapters of this handbook focus mainly on both old and recent developments on the equation of homomorphism for square symmetric groupoids the linear and polynomial functional equations in a single variable the Drygas functional equation on amenable semigroups monomial functional equation the Cauchy Jensen type mappings differential equations and differential operators operational equations and inclusions generalized module left higher derivations selections of set valued mappings D'Alembert's functional equation characterizations of information measures functional equations in restricted domains as well as generalized functional

stability and fixed point theory      **New Handbook of Mathematical Psychology: Volume 1, Foundations and Methodology** William H. Batchelder, Hans Colonius, Ehtibar N. Dzhafarov, Jay Myung, 2016-12-15 The field of mathematical psychology began in the 1950s and includes both psychological theorizing in which mathematics plays a key role and applied mathematics motivated by substantive problems in psychology Central to its success was the publication of the first Handbook of Mathematical Psychology in the 1960s The psychological sciences have since expanded to include new areas of research and significant advances have been made in both traditional psychological domains and in the applications of the computational sciences to psychology Upholding the rigor of the first title in this field to be published the New Handbook of Mathematical Psychology reflects the current state of the field by exploring the mathematical and computational foundations of new developments over the last half century This first volume focuses on select mathematical ideas theories and modeling approaches to form a foundational treatment of mathematical psychology      Wavelet Analysis and Its Applications, and Active Media Technology 2004 Jian-Ping Li, John Daugman, Victor Wickerhauser, 2004 Wavelet analysis and its applications have been one of the fastest growing research areas in the past several years Wavelet theory has been employed in numerous fields and applications such as signal and image processing communication systems biomedical imaging radar and air acoustics Active media technology is concerned with the development of autonomous computational or physical entities capable of perceiving reasoning adapting learning cooperating and delegating in a dynamic environment This book captures the essence of the state of the art in wavelet analysis and its applications and active media technology At the Congress invited talks were delivered by distinguished researchers namely Prof John Daugman of Cambridge University UK Prof Bruno Torresani of INRIA France Prof Victor Wickerhauser of Washington University USA Prof Ning Zhong of the Maebashi Institute of Technology Japan Prof John Yen of Pennsylvania State University USA and Prof Sankar K Pal of the Indian Statistical Institute India      **General Inequalities 5** WALTER, 2013-03-08 The Fifth International Conference on General Inequalities was held from May 4 to May 10 1986 at the Mathematisches Forschungsinstitut Oberwolfach Black Forest Germany The organizing committee consisted of W N Everitt Birmingham L Losonczi Debrecen and W Walter Karlsruhe Dr A Kovacec served efficiently and enthusiastically as secretary to the conference The meeting was attended by 50 participants from 16 countries In his opening address W Walter had to report on the death of five colleagues who had been active in the area of inequalities and who had served the mathematical community P R Beesack G Polya D K Ross R Bellman G Szeg He made special mention of G Polya who had been the last surviving author of the book Inequalities Cambridge University Press 1934 who died at the age of 97 years and whose many and manifold contributions to mathematics will be recorded elsewhere in due course Inequalities continue to play an important and significant role in nearly all areas of mathematics The interests of the participants to this conference reflected the many different fields in which both classical and modern inequalities continue to influence developments in mathematics In addition to the established fields the lectures clearly indicated the

importance of inequalities in functional analysis eigenvalue theory convexity number theory approximation theory probability theory mathematical programming and economics      **Uncertainty in Knowledge-Based Systems** Bernadette Bouchon-Meunier, Bernadette Bouchon, Ronald R. Yager, 1987-11-04      **Network Analysis in Marine Ecology** F. Wulff, J.G. Field, K.H. Mann, 2012-12-06 This book arises from a workshop on the application of network analysis to ecological flow networks The purpose is to develop a new tool for comparison of ecosystems paying particular attention to marine ecosystems After a review of the methods and theory data from a variety of marine habitats are analyzed and compared Readers are shown how to calculate such properties as cycling index average path length flow diversity indices of ecosystem growth and development and the origins and fates of particular flows This is a highly original contribution to the growing field of ecosystem theory in which attention is paid to the properties of the total functioning ecosystem rather than to the properties of individual organisms New insights are provided into the workings of marine systems      **Regularization and Bayesian Methods for Inverse Problems in Signal and Image Processing** Jean-Francois Giovannelli, Jérôme Idier, 2015-02-02 The focus of this book is on ill posed inverse problems These problems cannot be solved only on the basis of observed data The building of solutions involves the recognition of other pieces of a priori information These solutions are then specific to the pieces of information taken into account Clarifying and taking these pieces of information into account is necessary for grasping the domain of validity and the field of application for the solutions built For too long the interest in these problems has remained very limited in the signal image community However the community has since recognized that these matters are more interesting and they have become the subject of much greater enthusiasm From the application field's point of view a significant part of the book is devoted to conventional subjects in the field of inversion biological and medical imaging astronomy non destructive evaluation processing of video sequences target tracking sensor networks and digital communications The variety of chapters is also clear when we examine the acquisition modalities at stake conventional modalities such as tomography and NMR visible or infrared optical imaging or more recent modalities such as atomic force imaging and polarized light imaging      Information-Theoretic Aspects of Neural Networks P. S. Neelakanta, 2020-09-23 Information theoretics vis a vis neural networks generally embodies parametric entities and conceptual bases pertinent to memory considerations and information storage information theoretic based cost functions and neurocybernetics and self organization Existing studies only sparsely cover the entropy and or cybernetic aspects of neural information Information Theoretic Aspects of Neural Networks cohesively explores this burgeoning discipline covering topics such as Shannon information and information dynamics neural complexity as an information processing system memory and information storage in the interconnected neural web extremum maximum and minimum information entropy neural network training non conventional statistical distance measures for neural network optimizations symmetric and asymmetric characteristics of information theoretic error metrics algorithmic complexity based representation of neural information
