On Risk And Disaster:

On Risk and Disaster Ronald J. Daniels, Donald F. Kettl, Howard Kunreuther, 2011-06-07 Named one of Planetizen's Top 10 Books of 2006 Hurricane Katrina not only devastated a large area of the nation's Gulf coast it also raised fundamental questions about ways the nation can and should deal with the inevitable problems of economic risk and social responsibility This volume gathers leading experts to examine lessons that Hurricane Katrina teaches us about better assessing perceiving and managing risks from future disasters In the years ahead we will inevitably face more problems like those caused by Katrina from fire earthquake or even a flu pandemic America remains in the cross hairs of terrorists while policy makers continue to grapple with important environmental and health risks Each of these scenarios might in itself be relatively unlikely to occur But it is statistically certain that we will confront such catastrophes or perhaps one we have never imagined and the nation and its citizenry must be prepared to act That is the fundamental lesson of Katrina The 20 contributors to this volume address questions of public and private roles in assessing managing and dealing with risk in American society and suggest strategies for moving ahead in rebuilding the Gulf coast Contributors Matthew Adler Vicki Bier Baruch Fischhoff Kenneth R Foster Robert Giegengack Peter Gosselin Scott E Harrington Carolyn Kousky Robert Meyer Harvey G Ryland Brian L Strom Kathleen Tierney Michael J Trebilcock Detlof von Winterfeldt Jonathan Walters Richard J Zeckhauser *The Future of Risk Management* Howard Kunreuther, Robert J. Handbook on the Economics of Disasters Skidmore, Mark, 2022-10-13 Evaluating the myriad dimensions of how disasters can affect economic activity and decision making this cutting edge Handbook presents a timely analysis of the conditions that reduce or exacerbate disaster impacts Addressing developments in research on disaster economics internationally recognized scholars combine theoretical considerations with empirical methods to expand and improve the field of disaster mitigation **Of Rainfalls and Disasters** Juan Manuel Rodríguez Esteves , Disasters associated with natural phenomena such as earth quakes floods droughts etcetera are intensifying damages that translate into deaths the loss of infrastructure and the interruption of economic activities The accelerated growth of cities frequently incorporates new areas that are susceptible to certain hazards leaving society increasingly exposed due to a mismanagement of land Since the 1990s the social sciences have developed the approach of vulnerability which considers the conditions of weakness of a

society to cope with hazards We now know that risk is socially constructed and so disasters are not only a result of the intensity of the geophysical phenomena that unleash them but also of the contexts of vulnerability present when a phenomenon takes place The aim of this work is to show how the risk of flood disasters is constructed in Tijuana Baja California with four main elements as our starting point An examination of floods since the late 19th century the voice of the actors present for flooding events a theoretical model to understand the relationship between the hazard and the magnitude of the risk and recommendations for disaster risk management at a local level

Risk, Disaster, and Vulnerability S. Ravi Rajan, 2023-08 Over the course of the past century there has been a sustained reflective engagement about environmental risks disasters and human vulnerability in the technocene a term used by some humanist scholars to characterize the era in which we live characterized by complex technologies with accompanying hazards that can potentially harm human societies and their living environments on historically unprecedented scales This inquiry has raised a host of crucial questions Just how safe in humanity is in a world of toxic chemicals and industrial installations that have destructive potential What are the discordant consequences of the transformations of the natural world by twentieth century technologies To what extent is it feasible to contain chemical nuclear and other pollutants Is it at all possible to prevent runaway disasters in highly complex industrial technoscapes In what way do environmental hazards impact social and political orders The purpose of this essay is to help scholars and indeed ordinary citizens not versed in the extent literature in scientific public policy and humanistic genres understand their social theoretic import

Risk, Disaster and Crisis Reduction Valerie November, Yvan Leanza, 2014-10-06 In the field of risks and crises both the access to relevant information and its circulation are seen as crucial factors Based on a new integrated theoretical model focusing on the stakeholder the book proposes analysis of information reformulation and circulation in risk environments and crisis situations Simply circulating the information does not mean that it will be picked up by those who could benefit from it This has been amply demonstrated by the various crises and catastrophes that have shaken the planet in recent years In order to be able to deal with risk situations and crises it must be possible for information when it circulates to be understood and interpreted by a wide range of stakeholders working in fields such as health and natural or environmental risks By observing closely in three very different situations the way in which information is gathered processed distributed and used this book examines the countless reformulations redefinitions and even reorientations to which all information is subjected This multiple reformatting at least according to the hypothesis put forward in this book is an important element in ensuring that the information produced

circulates and reaches those for whom it is intended The intention is then to analyze the way in which information circulates in situations of risk and crisis In order to do it the authors propose a new theoretical model based on different approaches This model is anchored in the trend of research that has been oriented towards a wider understanding of risks and their territorial and social consequences These ideas question the approach to risk which focuses primarily on technical aspects and probability The model also draws from approaches to risk that focus on the stakeholders involved in the debates and the need for an integrated vision of risks Risks are thus considered heterogeneous plural and transcalar The information flow about risks was studied first in the SHOC Room of the World Health Organization WHO in Geneva a central place through which passes all information destined to managing world wide epidemic risks Then the research team monitored the constitution and the reception of a field library about risks management and reduction sent to Madagascar an island systematically hit by cyclones This following process has permitted the analysis of information dissemination during a crisis situation The third field work was done in Cameroun to observe the use and transmission of information in two NGO specializing in sanitary risks prevention using traditional and biomedical conceptualization of health and illness The book ends with a practical tool to assess and help the information circulation in risk and crisis situations
