Sensing The Enemy:

Wiring Vietnam Anthony J. Tambini, 2007-05-30 During the Vietnam War the U S Army deployed electronic sensors along the Ho Chi Minh Trail in Laos Cambodia North Vietnam and South Vietnam in order to detect and track troop and vehicle movements At approximately 8 100 miles in length monitoring this sophisticated logistics network consisting of roads trails vehicle parks petroleum pipelines and storage areas was no mean task Since the work was classified as Secret until only recently a comprehensive story of the electronic sensors used in Southeast Asia has never been completely told *Wiring Vietnam The Electronic Wall* relates the history of the electronic detection system that was deployed during the Vietnam War Author Anthony Tambini covers everything from the sensors used to detect seismic signals from nearby troop and vehicle movements to audio sensors that were deployed to pick up conversations of troops as well as traffic noise of vehicles to engine ignition detectors Beginning with the conception development and implementation of these sensors Tambini then relates how ultimately the various signals the sensors collected were transmitted to orbiting aircraft that would process and retransmit the signals onward to a base in Thailand There the data underwent further analysis for possible targets that could be attacked from the air Anthony Tambini a member of the 25th Tactical Fighter Squadron based at Ubon Thailand in the late 1960s was part of an organization that dropped these sensors His firsthand perspective along with rarely seen photographs of the actual sensors used will provide those interested in the Vietnam War and modern warfare with a clear picture of an undocumented side of history

Practice of Wireless Sensor Networks: Cover, Sense, and Inform Habib M. Ammari, 2022-10-03 This book aims at developing a reader's thorough understanding of the challenges and opportunities of two categories of networks namely k covered wireless sensor networks and k barrier covered wireless sensor networks. It presents a variety of theoretical studies based on percolation theory, convexity theory and applied computational geometry as well as the algorithms and protocols that are essential to their design, analysis and development. Particularly, this book focuses on the cover, sense and inform CSI paradigm with a goal to build a unified framework where connected k coverage or k barrier coverage, sensor scheduling and geographic data forwarding, gathering and delivery are jointly considered. It provides the interested reader with a fine study of the above networks which can be covered in introductory and advanced courses on wireless sensor networks. This book is useful to senior undergraduate and graduate students in computer science, computer engineering, electrical engineering, information science, information technology, mathematics and any related discipline. Also, it is of interest to computer scientists, researchers and practitioners in academia and industry with interest in these two networks from their deployment until data gathering and delivery.

Killer Apps Jeremy Packer, Joshua Reeves, 2020-02-28 In *Killer Apps*, Jeremy Packer and Joshua Reeves provide a detailed account of the rise of automation in warfare, showing how media systems are central to building weapons systems with artificial intelligence in order to more efficiently select and eliminate military targets. Drawing on the insights of a wide range of political and media theorists, Packer and Reeves develop a new theory for understanding how the intersection of media and military strategy drives today's AI arms race. They address the use of media to search for enemies in their analyses of the history of automated radar systems, the search for extraterrestrial life and the development of military climate science which treats the changing earth as an enemy. As the authors demonstrate, contemporary military strategy demands perfect communication in an evolving battlespace that is increasingly inhospitable to human frailties, necessitating humans' replacement by advanced robotics, machine intelligence and media systems.
