Sensor Technology In The Netherlands State Of The Art:

Sensor Technology in the Netherlands: State of the Art Albert van den Berg, Piet Bergveld, 2012-12-06 In the rapidly developing information society there is an ever growing demand for information supplying elements or sensors The technology to fabricate such sensors has grown in the past few decades from a skilful activity to a mature area of scientific research and technological development In this process the use of silicon based techniques has appeared to be of crucial importance as it introduced standardized mass fabrication techniques created the possibility of integrated electronics allowed for new transduction principles and enabled the realization of micromechanical structures for sensing or actuation Such micromechanical structures are particularly well suited to realize complex microsystems that improve the performance of individual sensors Currently a variety of sensor areas ranging from optical to magnetic and from micromechanical to biochemical sensors has reached a high level of sophistication In this MESA Monograph the proceedings of the Dutch Sensor Conference an initiative of the Technology Foundation STW held at the University of Twente on March 2 3 1998 are compiled It comprises all the oral and poster contributions of the conference and gives an excellent overview of the state of the art of Dutch sensor research and development Apart from Dutch work the contributions of two external invited experts from Switzerland are included **Micro and Nano Techniques for the Handling of Biological Samples** Jaime

Castillo-Leon, Winnie Edith Svendsen, Maria Dimaki, 2011-08-25 Several micro and nanomanipulation techniques have emerged in recent decades thanks to advances in micro and nanofabrication For instance the atomic force microscope AFM uses a nano sized tip to image push pull cut and indent biological material in air liquid or vacuum Using micro and nanofabrication techniques scientists can make ma *Smart Sensor Systems* Gerard Meijer, Kofi Makinwa, Michiel Pertijs, 2014-06-23 With contributions from an internationally renowned group of experts this book uses a multidisciplinary approach to review recent developments in the field of smart sensor systems covering important system and design aspects It examines topics over the whole range of sensor technology from the theory and constraints of basic elements physics and electronics up to the level of application orientated issues Developed as a complementary volume to *Smart Sensor Systems* Wiley 2008 which introduces the basics of smart sensor systems this volume focuses on emerging sensing technologies and applications including State of the art techniques for designing smart sensors and smart sensor systems including measurement techniques at system level such as dynamic error correction calibration self calibration and trimming Circuit design for sensor systems such as the design of precision instrumentation amplifiers Impedance sensors and the associated measurement techniques and electronics that measure electrical characteristics to derive physical and biomedical parameters such as blood viscosity or growth of micro organisms Complete sensor systems on a chip such as CMOS optical imagers and microarrays for DNA detection and the associated circuit and micro fabrication techniques Vibratory gyroscopes and the associated electronics employing mechanical and electrical signal amplification to enable low power angular rate
