## Sensory Neuropathies:

[illegible]

**Sensory Neuropathies** Arthur K. Asbury, 1995 While motor neuropathies and neuronopathies and mixed sensory motor neuropathies have been met with adequate interest by clinical and basic researchers and physicians pure sensory neuropathies and neuro-  
nopathies have received comparably less attention despite of the considerable morbidity they may cause in the individual patient This prompted us to organize an International Symposium on Sensory Neuropathies which was held in Vienna  
September 22-24, 1990 as satellite to the International Neuromuscular Congress held one week earlier in Munich Germany We were fortunate to have a faculty of experienced authorities in the field as participants This volume is the proceedings of  
the symposium Due to factors which were beyond our control publication of this volume was significantly delayed Despite the enormous progress of biomedicine in recent years most prominently in molecular biology we feel that the contributions of  
this volume still represent a valuable reference for clinical physiological biochemical and pathomorphological studies on the sensory nervous system for which similarly comprehensive data are difficult to locate November 1994 Arthur K Asbury

*Neurologic Complications of Cancer* Lisa M. DeAngelis, Jerome B. Posner, 2009 Patients with cancer can suffer from a bewildering variety of neurologic signs and symptoms The neurologic symptoms are often more disabling than the primary cancer Symptoms including confusion seizures pain and paralysis may be a result of either metastases to the nervous system or one of several nonmetastatic complications of cancer The physician who promptly recognizes neurologic symptoms occurring in a patient with cancer and makes an early diagnosis may prevent the symptoms from becoming permanently disabling or sometimes lethal This monograph an update of the first edition published in 1995 is divided into 3 sections The first classifies the wide variety of disorders that can cause neurologic symptoms the patient with cancer discusses the pathophysiology of nervous system metastases the pathophysiology and treatment of brain edema and the approach to supportive care of common neurologic symptoms such as seizures pain and side effects of commonly used supportive care agents The second section is devoted to nervous system metastases addressing in turn brain spinal cord meningeal and cranial and peripheral nerve metastases describing clinical symptoms approach to diagnosis and current treatment The third section addresses several nonmetastatic complications of cancer and includes sections on vascular disease infections metabolic and nutritional disorders side chemotherapy radiation and other diagnostic and therapeutic procedures The final chapter addresses paraneoplastic syndromes The book is intended for practicing oncologists neurologists neurosurgeons and radiation oncologists as well as internists who treated patients with cancer Our attempt was to write a book that would assist oncologists in understanding neurologic problems and neurologists in understanding oncologic problems The book is also intended for physicians training to specialize in any of the above areas It includes a practical approach to the diagnosis and management of patients with neurologic disease who are with known to have cancer or in whom cancer is suspected
