*Asymptotic Theory of Statistical Inference for Time Series* Masanobu Taniguchi, Yoshihide

Kakizawa, 2012-12-06 There has been much demand for the statistical analysis of dependent observations in many fields for example economics engineering and the natural sciences A model that describes the probability structure of a series of dependent observations is called a stochastic process The primary aim of this book is to provide modern statistical techniques and theory for stochastic processes The stochastic processes mentioned here are not restricted to the usual autoregressive AR moving average MA and autoregressive moving average ARMA processes We deal with a wide variety of stochastic processes for example non Gaussian linear processes long memory processes nonlinear processes orthogonal increment processes and continuous time processes For them we develop not only the usual estimation and testing theory but also many other statistical methods and techniques such as discriminant analysis cluster analysis nonparametric methods higher order asymptotic theory in view of differential geometry large deviation principle and saddlepoint approximation Because it is difficult to use the exact distribution theory the discussion is based on the asymptotic theory Optimality of various procedures is often shown by use of local asymptotic normality LAN which is due to LeCam This book is suitable as a professional reference book on statistical analysis of stochastic processes or as a textbook for students who specialize in statistics It will also be useful to researchers including those in econometrics mathematics and seismology who utilize statistical methods for stochastic processes
