Sequential Data In Biological Experiments:

Sequential Data in Biological Experiments Ellis A. Roberts, 2012-12-06 There are many excellent books on general statistical methods in agricultural and biological research. These books cover a broad range of methods without going into detail on specialized topics. A number of topics including regression analysis, design of experiments, biological assay and categorical analysis have received in-depth treatment in specialized texts. Little appears in standard textbooks on experiments in which observations form sequences. The live weights of animals during a long-term experiment provide a familiar example of data forming a sequence but many others occur for example moisture content of segments of soil cores, successive counts of insects in an orchard and hormone levels in blood over a period. Correlations are likely to be found among the observations in all these examples. The book by Goldstein 1979 provided the first systematic coverage of the principles involved in longitudinal studies but is mainly concerned with observational studies on humans. The main aims of this book are to provide research workers with methods of analysing data from comparative experiments with sequential observations and to demonstrate special features of the design of such experiments. These aims are achieved by working through sets of data.

Biological Data Mining And Its Applications In Healthcare Xiaoli Li, See-kiong Ng, Jason T L Wang, 2013-11-28 Biologists are stepping up their efforts in understanding the biological processes that underlie disease pathways in the clinical contexts. This has resulted in a flood of biological and clinical data from genomic and protein sequences, DNA microarrays, protein interactions, biomedical images to disease pathways and electronic health records. To exploit these data for discovering new knowledge that can be translated into clinical applications, there are fundamental data analysis difficulties that have to be overcome. Practical issues such as handling noisy and incomplete data, processing compute-intensive tasks and integrating various data sources are new challenges faced by biologists in the post-genome era. This book will cover the fundamentals of state-of-the-art data mining techniques which have been designed to handle such challenging data analysis problems and demonstrate with real applications how biologists and clinical scientists can employ data mining to enable them to make meaningful observations and discoveries from a wide array of heterogeneous data from molecular biology to pharmaceutical and clinical domains.

Pattern Discovery in Biomolecular Data Jason T. L. Wang, Bruce A. Shapiro, Dennis Shasha, 1999-10-28 Finding patterns in biomolecular data particularly in DNA and RNA is at the center of modern biological research These data are complex and growing rapidly so the search for patterns requires increasingly sophisticated computer methods Pattern Discovery in Biomolecular Data provides a clear up to date summary of the principal techniques Each chapter is self contained and the techniques are drawn from many fields including graph theory information theory statistics genetic algorithms computer visualization and vision Since pattern searches often benefit from multiple approaches the book presents methods in their purest form so that readers can best choose the method or combination that fits their needs The chapters focus on finding patterns in DNA RNA and protein sequences finding patterns in 2D and 3D structures and choosing system components This volume will be invaluable for all workers in genomics and genetic analysis and others whose research requires biocomputing

Machine Learning: ECML 2000 Ramon Lopez de Mantaras, Enric Plaza, 2007-03-06 The biennial European Conference

on Machine Learning ECML series is intended to provide an international forum for the discussion of the latest high quality research results in machine learning and is the major European scientific event in the field. The eleventh conference ECML 2000 held in Barcelona Catalonia Spain from May 31 to June 2 2000 has continued this tradition by attracting high quality papers from around the world. Scientists from 21 countries submitted 100 papers to ECML 2000 from which 20 were selected for long oral presentations and 23 for short oral presentations. This selection was based on the recommendations of at least two reviewers for each submitted paper. It is worth noticing that the number of papers reporting applications of machine learning has increased in comparison to past ECML conferences. We believe this fact shows the growing maturity of the field. This volume contains the 43 accepted papers as well as the invited talks by Katharina Morik from the University of Dortmund and Pedro Domingos from the University of Washington at Seattle. In addition three workshops were jointly organized by ECML 2000 and the European Network of Excellence: *net Dealing with Structured Data in Machine Learning and Statistics*, *Workshop on Machine Learning in the New Information Age* and *Meta Learning: Building Automatic Advice Strategies for Model Selection and Method Comparison*.

Collecting Experiments Bruno J. Strasser, 2019-06-07. Databases have revolutionized nearly every aspect of our lives. Information of all sorts is being collected on a massive scale from Google to Facebook and well beyond. But as the amount of information in databases explodes we are forced to reassess our ideas about what knowledge is, how it is produced, to whom it belongs, and who can be credited for producing it. Every scientist working today draws on databases to produce scientific knowledge. Databases have become more common than microscopes, voltmeters, and test tubes, and the increasing amount of data has led to major changes in research practices and profound reflections on the proper professional roles of data producers, collectors, curators, and analysts. *Collecting Experiments* traces the development and use of data collections, especially in the experimental life sciences, from the early twentieth century to the present. It shows that the current revolution is best understood as the coming together of two older ways of knowing: collecting and experimenting, the museum and the laboratory. Ultimately Bruno J. Strasser argues that, by serving as knowledge repositories as well as indispensable tools for producing new knowledge, these databases function as digital museums for the twenty-first century.

Sequence Data Mining Guozhu Dong, Jian Pei, 2007-10-31. Understanding sequence data and the ability to utilize this hidden knowledge will create a significant impact on many aspects of our society. Examples of sequence data include DNA, protein, customer purchase history, web surfing history, and more. This book provides thorough coverage of the existing results on sequence data mining, as well as pattern types and associated pattern mining methods. It offers balanced coverage on data mining and sequence data analysis, allowing readers to access the state-of-the-art results in one place.
