When Technology Fails Matthew Stein,2008-08-18

There's never been a better time to be prepared. This book is an indispensable basic manual for the real life issues that await us in the decades to come. A treasure trove of practical wisdom. James Howard Kunstler, author of *The Geography of Nowhere*. Matthew Stein's comprehensive primer on sustainable living skills from food and water to shelter and energy to first aid and crisis management skills prepares you to embark on the path toward sustainability. But unlike any other book, Stein not only shows you how to live green in seemingly stable times but to live in the face of potential disasters lasting days or years coming in the form of social upheaval, economic meltdown, or environmental catastrophe. *When Technology Fails* covers the gamut. Inside you'll learn: The basics of installing a renewable energy system for your home or business. How to find and sterilize water in the face of utility failure. How to keep warm if you've been left temporarily homeless. Practical information for dealing with water quality issues. Alternative health and first aid techniques. Each chapter describes skills for self-reliance in good times and bad. Chapters include: A survey of the risks to the status quo. Supplies and preparation for short and long term emergencies. Emergency measures for survival. Prepping water, food, shelter, and clothing. First aid, low tech medicine, and healing. Securing energy, heat, and power. Metalworking. Utensils and storage. Low tech chemistry, engineering, machines, and materials. Fully revised and expanded, *When Technology Fails* ends on a positive, proactive note with a chapter on *Making the Shift to Sustainability*, which offers practical suggestions for changing our world on personal, community, and global levels. *When Technology Fails* is a massive project done well. First, the book gives a superb presentation of WHY one should be more aware and prepared, and then HOW one should go about this. The scope of this book is thorough. John McPherson, author *Primitive Wilderness Living and Survival Skills*. *Housing Reclaimed*, Jessica Kellner, 2011-10-01. How to build community, reduce waste, and create affordable, unique homes. Housing is a fundamental human right. For most of human history, our homes were built by hand from whatever local materials were available. However, since the Industrial Revolution, most housing has become little more than quickly constructed, mass-produced, uniform boxes. At the same time, the invention and standardization of the thirty-year mortgage and our ever-increasing reliance on credit has come to mean that most of us never own our homes outright. *Housing Reclaimed* is a call to arms for nonconventional home builders. It examines how technological advances, design evolution, and resourceful out-of-the-box thinking about materials and efficiency can help us meet the challenge of building affordable, environmentally friendly, beautiful, and unique homes. Focusing on the use of salvaged and reclaimed materials, this inspirational volume is packed with case studies of innovative projects, including Phoenix Commotion working together towards low-income home ownership through sweat equity and 100 percent recycled materials; HabeRae revitalizing neighborhoods by creating urban infill using modern technology and sustainable and reclaimed materials; Builders of Hope rescuing and rehabilitating whole houses slated for demolition. These projects and others like them demonstrate that building one's own home does not have to be an unattainable dream. This beautifully illustrated guide is a must-read for anyone interested in creating quality, zero or low-debt housing, reducing landfill waste, and

creating stronger communities Jessica Kellner is the editor of Natural Home and Garden magazine and a passionate advocate of using architectural salvage to create aesthetically beautiful low cost housing
