Markets The State And The Environment Towards Integration:

Markets, the State and the Environment Robyn Eckersley, 1996 Partnering for the Environment Eric C. Poncelet, 2004-02-10 Environmental policy domains are increasingly adopting strategies of cooperation over those of conflict Decision making processes founded upon collaboration and public participation are receiving more attention and favor and in turn engendering multistakeholder environmental partnerships In his thoughtful analysis Eric C Poncelet seeks to illuminate the mechanics of these partnerships especially at the level of social interaction Drawing on ethnographic research performed with four case study partnerships in the European Union and the United States Poncelet focuses on the diverging ways that stakeholders think talk and conventionally act with regard to the environmental issues at stake Also explored are the roles of environmental partnerships as sites of personal transformation where participants and their perspectives conceptualizations and expectations can and do change Partnering for the Environment concludes by examining the broader implications of multistakeholder partnerships for the future of environmental decision making and suggests ways by which these partnerships may be more effectively used and managed New Instruments for Environmental Policy in the EU Jonathan Golub, 1998-06-04 New Instruments for Environmental Policy in the EU provides a comprehensive analysis of the debate over new forms of environmental regulation in the European Union The conclusions draw attention to critical aspects of instrument design as well as the difficulty of accommodating national policy diversity without contravening EU and international tr The Evolution of Markets for Water Jeff Bennett, 2005-01-01 How policymakers are striving to move away from government regulation and achieve a balance between a property rights and a market based approach to the allocation of water resources Sustainable Development, International Criminal Justice, and Treaty Implementation Sébastien Jodoin, Marie-Claire Cordonier Segger, 2013-06-24 Sustainable Development International Criminal Justice and Treaty Implementation provides a serious and timely perspective on the relationship between two important and dynamic fields of international law Comprising chapters written by leading academics and international lawyers this book examines how the principles and practices of international criminal law and sustainable development can contribute to one another s elaboration interpretation and implementation Chapters in the book discuss the potential and limitations of international criminalization as a means for protecting the basic foundations of sustainable development the role of existing international crimes in penalizing serious forms of economic social environmental and cultural harm the indirect linkages that have developed between sustainable development and various mechanisms of criminal accountability and redress and innovative proposals to broaden the scope of international criminal justice With its rigorous and innovative arguments this book forms a unique and urgent contribution to current debates on the future of global justice and sustainability The Nordic Environments Marko Joas, Ann-Sofie Hermanson, 2019-01-04 First published in 1999 this volume features 13 contributors with expertise in social science and environmental research who have brought together comparative 12 articles which study

the connection between humanity and nature focusing on comparisons between the Nordic countries Denmark Finland Norway and Sweden They are among the most homogeneous and hence most comparable societies in Europe The articles reflect the need for environmental and political change recognised by social scientists and political scientists across the Nordic countries with an emphasis on ecological modernisation They first consider conceptions of the environment before comparing both between and within these countries The traditions and institutions presented in the volume reflect the comprehensiveness of the approaches used within the field in the Nordic countries The Politics of Aquaculture Caitríona Carter, 2018-06-12 Aquaculture is increasingly complementing global fisheries and is relevant to ocean and freshwater health biodiversity and food security as well as coastal management tourism and natural heritage This book makes the case for treating the governance of this industry as meriting attention in its own right abandoning the polemic discussions of fish farming and opening up new ways for debating its past present and future Developing and applying an original analytical framework for studying fish farming aguaculture embedded into larger theory about the changing political system the author generates and compares new data on the governance of aquaculture Detailed case studies are presented of Scottish salmon Aguitaine trout in France and seabass and seabream in Greece The book shows how ecological issues are related to economic and social issues as well as interdependences between territories public and private regulation and different knowledge forms demonstrating that these are creating alternative approaches for sustainability governance It provides a deeper understanding of the political aspects of governing European aquaculture including how it both is structured by and is structuring politics It is aimed at advanced students researchers and professionals in aquaculture and fisheries as well as those with a broader interest in sustainability politics and sustainability governing practices Political Ecology David Bell, Leesa Fawcett, Roger Keil, Peter Penz, 2005-08-18 Political Ecology addresses environmental issues which Innis was concerned with from a contemporary political economy perspective They explore a wide range of themes and issues including sustainability risk and regulation population growth planetary management impact of humanity on environment role of technology and communication Case studies provide further insight into issues such as industrial racism women and development and collective action by highlighting ethical and political questions and providing critical insights into the issues and debates in political ecology Routledge Handbook of International Political Economy (IPE) Mark Blyth, 2009-06-02 The study of the International Political Economy IPE like the IPE itself is plural and unbounded Despite what partisans sometimes say rather than there being one way of studying the IPE that is the right way we find across the world great variation in IPE scholarship in terms of focus questions and methods How then can we make sense of this and understand the field as a whole rather than simply learn one part of it This Handbook is designed to address precisely this concern It maps the shifting boundaries and diverse theoretical commitments of IPE around the world It engages the geographical and theoretical diversity of the different versions of IPE found in North America the UK in Asia and Australia and notes the absences of

distinctive versions of IPE in Europe and Latin America The volume groups together the essential attributes and positions of each school inviting the reader to engage with and learn about IPE in all of its guises through this evolving global conversation Rather than adjudicate the one true version of IPE it argues that the intellectual diversity we see around the world is an essential and positive feature of the field With over twenty contributors from a wide range of countries Routledge Handbook of International Political Economy is an essential resource for all those with an interest in this complex and rapidly evolving field of study The International Yearbook of Environmental and Resource Economics 2000/2001 Tom Tietenberg, Henk Folmer, 2000-05-25 There has been an explosion in the literature and research on environmental and resource economics in recent years This major annual publication provides a cutting edge survey of current research by the leading experts in the field Water Policy in the Netherlands Stijn Reinhard, 2010-09-30 As a low lying delta region with a high population density the Netherlands has long focused on the prevention of flooding catastrophes and the reclamation of valuable land The evolution of Dutch water governance beginning with the creation of local water boards in the Middle Ages and growing into a complex infrastructure of polders dams and controlled waterways offers a compelling study of pitfalls and successes within one of the worlds most challenging regions for water management Water Policy in the Netherlands traces the arc of water governance in the country from technological innovations to prevent wide scale flooding to strategies focused primarily on improving water quality to an integral water management approach which brings together perspectives from economics hydrology ecology water law and water technology. The contributions in this book demonstrate how both the technical and social sciences must play key roles in crafting policy in the face of serious environmental challenges including climate change sea level rise and increasing soil subsidence Innovative themes explored in the work include how economic models and pricing structures might improve efficiency in the distribution of water resources how the competing uses for water including for recreation arable agriculture fisheries and natural preservation create demands on both the quantity and quality of water resources and how public participation cogovernance and the balance of public and private interests will be necessary to meet the goals of the EU s Water Framework Directive This resource serves as both an invaluable case study and as a text to develop the analytical tool of integral water management for students policy makers and NGO professionals in developed and developing regions Property and the Law in Energy and Natural Resources Aileen McHarg, 2010 The law of energy and natural resources has always had a strong focus on property as one of its components but there are relatively few comparative book length treatments of both property law and energy and natural resources law The aim of this edited collection is to explore the multiple dimensions of the contemporary relationship between property and energy and natural resources law Its genesis was the growing resurgence of global interest in questions of property in energy and resources and how it manifests itself across legal regimes around the world With an international and comparative character the collection seeks to capture differences in the meaning of property and the different views about the role it should play in

a diverse range of contexts civil law and common law the law of indigenous communities public law and private law and national and international law Key issues discussed include private rights and common property situations privatization and regulation competition for land use and resources the role of property rights in environmental protection and the balance between national sovereignty and the security of foreign investment The collection thus has relevance for a wide readership interested in the legal dimensions of property as an increasingly important aspect of the law for energy and resources across diverse countries and at the international level The contributors are established experts in the energy and natural resources law field and the collection builds upon a body of previous collaborative work in this area **Environmental Regulation** Through Financial Organisations: Comparative Perspectives on the Industrialised Nations Benjamin Richardson, 2002-02-13 This book takes a comparative perspective of practice in the European Union North America Japan and Australasia arguing that existing legal reforms to promote sustainable development are unlikely to be successful unless environmental policy can be diffused and embedded in the financial services sector This sector plays a crucial role in creating the financial conditions that allow much economic development to proceed Financial markets are already highly regulated in pursuance of various public policy objectives and there is scope to adapt existing regulation to incorporate environmental aspects into the financial services sector In terms of specific reforms the book focuses on the role of corporate environmental reporting economic instruments and liability rules to provide a proper context for engaging financial organisations with the environment as well as reforms to the system of prudential regulation that currently governs this sector Beyond the focus on the financial services sector the book raises complex questions regarding the relationship between the state and market institutions in environmental policy and will appeal to scholars from a wide range of disciplines interested in problems of environmental governance International Aid and China's Environment Katherine Morton, 2006-05-17 Rapid economic growth in the world's most populous nation is leading to widespread soil erosion desertification deforestation and the depletion of vital natural resources The scale and severity of environmental problems in China now threaten the economic and social foundations of its modernization Using case studies Morton analyzes the relationship between international and local responses to environmental problems in China challenging the prevailing wisdom that weak compliance is the only constraint upon local environmental management in China It advances two interrelated discussions first it constructs a conceptual framework for understanding the key dimensions of environmental capacity This is broadly defined to encompass the financial institutional technological and social aspects of environmental management Second the book presents the results of an empirical inquiry into the implementation of donor funded environmental projects in both China's poorer and relatively developed regions By drawing upon extensive fieldwork it seeks to explain how and under what conditions international donors can strengthen China's environmental capacity especially at the local level It will be of interest to those studying Chinese politics environmental studies and international relations China's Way to Carbon Emissions Reduction

Ying Shen, 2015-08-18 Now that the most recent scientific estimates have shown that China has become the world's largest source of greenhouse gas emissions China's influence on the world's environment and sustainable development highlights the importance of tailoring Chinese climate change law to conform with the requirements of international conventions and agreements on climate change This thorough analysis based on an examination of climate status legal background and current regulatory systems in China examines the potential role of different policy instruments in reducing carbon emissions in order to find an appropriate choice for China and recommends approaches to key issues for relevant authorities The author conducts a comprehensive and in depth study on the three mainstream environmental policy instruments used to control carbon emissions the cap and trade system the carbon tax and command and control regulations in a Chinese context She reviews China's current policies and elucidates how the issues of climate change and global warming call for social environmental economic and legal reforms in China especially in the areas of administrative law and property rights law Among the issues and topics covered are the following key issues on designing and implementing each of the three policy instruments the choice of regulatory instruments for carbon emissions reduction in a socialist market economy based on the discussion of market failure and government failure theories legal challenges from China's current administrative legislation and the definition of carbon emissions entitlements practical effect of China's climate change policy at the national provincial and local levels effectiveness of China's implementation of its international obligations lessons learned from schemes implemented in the United States and Australia comparison of China's seven regional pilot emissions trading scheme ETS programmes with the well established EU ETS linkage between China's ETS and other ETSs from a global perspective and future direction of an emerging carbon market in China The analysis assesses the critical costs and benefits of each approach in the context of selected case studies taking legal literature in the field fully into account Given that the Chinese government is taking steps to reduce emissions by altering energy production and usage and is signalling a willingness to make similar commitments in a multilateral treaty it is very timely and important for lawmakers and scholars within and outside China to think about new and appropriate regulatory measures to respond to the crisis and plan for a sustainable future This study provides not only a useful benchmark for both China and other countries in formulating initiatives on enhancing climate protection but also details the global implications for governments and for international organizations concerned with the understanding between China and the rest of the world in the context of climate change mitigation The International Political Economy of the Environment Dimitris Stevis, Valerie J. Assetto, 2001 Thirteen contributions from political scientists sociologists and other academics represent a critical approach to the IPE of the environment an approach that focuses on the historical development and framing of environmental problems and solutions and that seeks to understand the social priorities or purpose that differing problems and solutions reflect from the preface A unifying theme is the idea that the way in which problems are framed intimately impacts the kinds of solutions that are proposed A sampling of topics environmental

NGOs TNCs and the question of governance environmental discourse and danger in Dominican and Cuban urban watersheds and global change and the political economy of sustainable development in Brazil Annotation copyrighted by Book News Inc Portland OR The Environment Between Theory and Practice Avner de-Shalit,2000-03-10 Why is there a gap between the questions that environmental philosophers discuss and the issues that motivate environmental activists The author attempts to bridge this gap by combining tools of political philosophy with questions of environmental ethics and politics He defends a radical position in relations to environmental protection and social policies in order to put forward a political theory which is not only philosophically sound but also relevant to the practice of environmental activism He argues that several directions in environmental ethics can be at odds with the contemporary political debates surrounding environmental politics He then goes on to examine the environmental scope of the political theories of liberalism communitarianism participatory democracy and socialism and concludes that the last two are crucial for protecting the environment

Research Handbook on International Law and Natural Resources Elisa Morgera, Kati Kulovesi, 2016-11-25 Research Handbook on International Law and Natural Resources provides a systematic and comprehensive analysis of the role of international law in regulating the exploration and exploitation of natural resources It illuminates interactions and tensions between international environmental law human rights law and international economic law It also discusses the relevance of soft law international dispute settlement as well as of various unilateral bilateral regional and transnational initiatives in the governance of natural resources While the Handbook is accessible to those approaching the subject for the first time it identifies pressing areas for further investigation that will be of interest to advanced researchers
