Markov Cell Structures Near A Hyperbolic Set:

Markov Cell Structures near a Hyperbolic Set F. Thomas Farrell, Lowell Jones, 1993 The authors argument is a spiritual descendent of earlier work of Adler and Weiss Sina and Bowen and involves a close study of triangulations The discussion is long and technical but the outline of the proof is sketched clearly in Section 1 for the special case of italic F an expanding immersion A concluding section lists problems on hyperbolic sets Markov partitions and related matters remarks on topological invariants including the conjectured vanishing of Pontryagin classes for manifolds supporting Anosov diffeomorphisms may be of particular interest *Markov cell structures near a hyperbolic set* Tom Farrell, Lowell Jones, 1993 Random Perturbations of Hamiltonian Systems Mark Iosifovich Freidlin, Alexander D. Wentzell, 1994 Random perturbations of Hamiltonian systems in Euclidean spaces lead to stochastic processes on graphs and these graphs are defined by the Hamiltonian In the case of white noise type perturbations the limiting process will be a diffusion process on the graph Its characteristics are expressed through the Hamiltonian and the characteristics of the noise Freidlin and Wentzell calculate the process on the graph under certain conditions and develop a technique which allows consideration of a number of asymptotic problems The Dirichlet problem for corresponding elliptic equations with a small parameter are connected with boundary problems on the graph **A Topological Chern-Weil Theory** Anthony Valiant Phillips, David A. Stone, 1993 We examine the general problem of computing characteristic invariants of principal bundles whose structural group italic capital G is a topological group Under the hypothesis that italic capital G has real cohomology finitely generated as an bold R module we are able to give a completely topological local method for computing representative cocycles for real characteristic classes our method applies for example to the homologically 10 dimensional non Lie group of Hilton Roitberg Stasheff *Littlewood-Paley Theory on Spaces of Homogeneous Type and the Classical Function Spaces* Yongsheng Han, Eric T. Sawyer, 1994 In this work Han and Sawyer extend Littlewood Paley theory Besov spaces and Triebel Lizorkin spaces to the general setting of a space of homogeneous type For this purpose they establish a suitable analogue of the Calder on reproducing formula and use it to extend classical results on atomic decomposition interpolation and T1 and Tb theorems Some new results in the classical setting are also obtained atomic decompositions with vanishing b moment and Littlewood Paley characterizations of Besov and Triebel Lizorkin spaces with only half the usual smoothness and cancellation conditions on the approximate identity Duality and Definability in First Order Logic Michael Makkai, 1993 We develop a duality theory for small Boolean pretoposes in which the dual of the italic capital T is the groupoid of models of a Boolean pretopos italic capital T equipped with additional structure derived from ultraproducts The duality theorem states that any small Boolean pretopos is canonically equivalent to its double dual We use a strong version of the duality theorem to prove the so called descent theorem for Boolean pretoposes which says that category of descent data derived from a conservative pretopos morphism between Boolean pretoposes is canonically equivalent to the domain pretopos The descent theorem

contains the Beth definability theorem for classical first order logic Moreover it gives via the standard translation from the language of categories to symbolic logic a new definability theorem for classical first order logic concerning set valued functors on models expressible in purely syntactical arithmetical terms

Harmonic Analysis for Anisotropic Random Walks on Homogeneous Trees Alessandro Figà-Talamanca, Tim Steger, 1994 This work presents a detailed study of the anisotropic series representations of the free product group $Z \amalg Z \amalg Z \amalg Z$ These representations are infinite dimensional irreducible and unitary and can be divided into principal and complementary series Anisotropic series representations are interesting because while they are not restricted from any larger continuous group in which the discrete group is a lattice they nonetheless share many properties of such restrictions The results of this work are also valid for nonabelian free groups on finitely many generators

Weakly Nonlinear Dirichlet Problems on Long or Thin Domains Edward Norman Dancer, 1993 In this paper we discuss the existence uniqueness and asymptotic behavior of positive solutions of the equation $\Delta u = \lambda u$ in Ω on partial derivative boundary degree of a polynomial symbol Ω surmounted by λ times symbol n and $u = 0$ on partial derivative boundary degree of a polynomial symbol Ω surmounted by λ times symbol n for n large Here Ω surmounted by λ is a bounded domain in \mathbb{R}^k with smooth boundary Note that by rescaling the equation including λ our theory covers problems on domains set membership symbol Ω surmounted by λ times symbol 1 where set membership symbol is small

Abelian Coverings of the Complex Projective Plane Branched along Configurations of Real Lines Eriko Hironaka, 1993 This work studies abelian branched coverings of smooth complex projective surfaces from the topological viewpoint Geometric information about the coverings such as the first Betti numbers of a smooth model or intersections of embedded curves is related to topological and combinatorial information about the base space and branch locus Special attention is given to examples in which the base space is the complex projective plane and the branch locus is a configuration of lines

Brownian Motion on Nested Fractals Tom Lindstrøm, 1990 Lindstrøm U of Oslo constructs Brownian motion on a reasonably general class of self similar fractals He deals with diffusions self similar fractals fractal Laplacians asymptotic distribution of eigenvalues nonstandard analysis Annotation copyright Book News Inc Portland Or

\$(16,6)\$ Configurations and Geometry of Kummer Surfaces in \mathbb{P}^3 Maria del Rosario Gonzalez-Dorrego, 1994 The philosophy of the first part of this work is to understand and classify Kummer surfaces by studying 16 6 configurations Chapter 1 is devoted to classifying 16 6 configurations and studying their manifold symmetries and the underlying questions about finite subgroups of $\mathrm{PGL}(4, \mathbb{C})$ In chapter 2 we use this information to give a complete classification of Kummer surfaces together with explicit equations and the explicit description of their singularities

Molecular Propagation through Electron Energy Level Crossings George Allan Hagedorn, 1994 The principal results of this paper involve the extension of the time dependent Born Oppenheimer approximation to accommodate

the propagation of nuclei through generic minimal multiplicity electron energy level crossings The Born Oppenheimer approximation breaks down at electron energy level crossings which are prevalent in molecular systems We classify generic minimal multiplicity level crossings and derives a normal form for the electron Hamiltonian near each type of crossing We then extend the time dependent Born Oppenheimer approximation to accommodate the propagation of nuclei through each type of electron energy level crossing

On the Correlation of Multiplicative and the Sum of Additive Arithmetic Functions Peter D. T. A. Elliott, 1994 The correlation of multiplicative arithmetic functions on distinct arithmetic progressions and with values in the complex unit disc cannot be continually near to its possible maximum unless each function is either very close to or very far from a generalized character Moreover under accessible condition the second possibility can be ruled out As a consequence analogs of the standard limit theorems in probabilistic number theory are obtained with the classical single additive function on the integers replaced by a sum of two additive functions on distinct arithmetic progressions

Gorenstein Quotient Singularities in Dimension Three Stephen Shing-Toung Yau, Yung Yu, 1993 In chapter one we address the classification of finite subgroups of italic capitals SL bold 3 double struck capital C This is followed by a general method to find invariant polynomials and their relations of finite subgroups of italic capitals GL bold 3 double struck capital C Lastly we recall some properties of quotient varieties and prove that double struck capital C3 italic capital G has isolated singularities if and only if italic capital G is abelian and 1 is not an eigenvalue of g in italic capital G

Deformation Quantization for Actions of \mathbb{R}^d Marc Aristide Rieffel, 1993 This work describes a general construction of a deformation quantization for any Poisson bracket on a manifold which comes from an action of \mathbb{R}^d on that manifold These deformation quantizations are strict in the sense that the deformed product of any two functions is again a function and that there are corresponding involutions and operator norms Many of the techniques involved are adapted from the theory of pseudo differential operators The construction is shown to have many favorable properties A number of specific examples are described ranging from basic ones such as quantum disks quantum tori and quantum spheres to aspects of quantum groups

Qualitative Analysis of the Periodically Forced Relaxation Oscillations Mark Levi, 1981

Extensions of the Jacobi Identity for Vertex Operators, and Standard $A^{\{1\}}_1$ -Modules Cristiano Husu, 1993 The main axiom for a vertex operator algebra over a field of characteristic zero the Jacobi identity is extended to multi operator identities Then relative bold capital Z2 twisted vertex operators are introduced and a Jacobi identity for these operators is established Then these ideas are used to interpret and recover the twisted bold capital Z operators and corresponding generating function identities developed by Lepowsky and R L Wilson This work is closely related to the twisted parafermion algebra constructed by Zamolodchikov Fateev

An Index of a Graph with Applications to Knot Theory Kunio Murasugi, Józef Przytycki, 1993 There are three chapters to the memoir The first defines and develops the notion of the index of a graph The next chapter presents the general application of the graph index to knot theory The last section is devoted to particular examples such as

determining the braid index of alternating pretzel links A second result shows that for an alternating knot with Alexander polynomial having leading coefficient less than 4 in absolute value the braid index is determined by polynomial invariants

Orthogonal Decompositions and Functional Limit Theorems for Random Graph Statistics Svante Janson, 1994 We define an orthogonal basis in the space of real valued functions of a random graph and prove a functional limit theorem for this basis Limit theorems for other functions then follow by decomposition The results include limit theorems for the two random graph models $G_{n,p}$ and $G_{n,m}$ as well as functional limit theorems for the evolution of a random graph and results on the maximum of a function during the evolution Both normal and non normal limits are obtained As examples applications are given to subgraph counts and to vertex degrees

The Kinematic Formula in Riemannian Homogeneous Spaces Ralph Howard, 1993 This memoir investigates a method that generalizes the Chern Federer kinematic formula to arbitrary homogeneous spaces with an invariant Riemannian metric and leads to new formulas even in the case of submanifolds of Euclidean space
