Seeing Like a Rover Janet Vertesi, 2015-04-22 Seeing Like a Rover brings the Mars Exploration Rover mission to vivid life through the author's years of immersion with the team during routine operations on Mars In the book Janet Vertesi explores the social and technical achievements of making knowledge about Mars based on iterative digital representations of its surface We see how scientists on the Rover mission both perform the digital

transformations that bring new features in their images to light enabling discovery as well as how they collectively interpret images to determine where the Rovers are located on Mars and what they should do next Using her close study of digital imaging which exhibits a sensitivity to the social context of scientific work Vertesi discusses how representation on the mission is never about finding a single way of truthfully representing Mars Representation is instead she argues a question of using image processing techniques strategically to reveal and conceal different features of the planet s surface and of bringing these multiple representations together to make both knowledge and collective decisions about exploration on the Red Planet Seeing Like a Rover speaks to many themes that are familiar to historians sociologists and philosophers of science Issues such as trust among knowledge making teams the different epistemic status and practices of the lab and the field and the heritage of visual languages in an emerging discipline are just as relevant in other periods and places Moreover by revealing how representational practices craft social visions Vertesi develops a framework that can be applied to scientific imaging across a variety of time periods and scientific contexts [The Little Mars Rovers](#) Annie Freestone,2008-05

Exploring Space, 2010 **Working on Mars** William J. Clancey, 2012 Beginning in 2004 a team of geologists and other planetary scientists did field science in a dark room in Pasadena exploring Mars from NASA's Jet Propulsion Laboratory JPL by means of the remotely operated Mars Exploration Rovers MER Clustered around monitors living on Mars time painstakingly plotting each movement of the rovers and their tools sensors and cameras these scientists reported that they felt as if they were on Mars themselves doing field science The MER created a virtual experience of being on Mars This book examines how the MER has changed the nature of planetary field science NASA cast the rovers Spirit and Opportunity as robotic geologists and ascribed machine initiative to remotely controlled actions Clancey argues that the actual explorers were not the rovers but the scientists who imaginatively projected themselves into the body of the machine to conduct the first overland expedition of another planet The author investigates how the design of the rover mission enables field science on Mars explaining how the scientists and rover engineers manipulate the vehicle and why the programmable tools and analytic instruments work so well for them

extinction These topics are considered in the latter chapters of the book and provide a fascinating look at our existence on Earth and the possibility of life elsewhere
