Muggia,Marcel Rozenzweig,2012-12-06 The methodology of drug development has been the subject of extensive discussion by a relatively small group of individuals in industry and government who have been intimately concerned with the identification and study of new anticancer drugs The Chemotherapy Program of the National Cancer Institute has represented the major focus of initial efforts in drug development as summarized in the historical perspective presented in chapter 1 and its references It is no coincidence that the Chemotherapy Program was the origin of the Division of Cancer Treatment a government entity that has had a pivotal role in the growth of clinical oncology In an analogous fashion this book presents the methodology employed in the clinical study of anticancer drugs within the broad context of cancer treatment The research orientation promulgated in the study of new drugs is a central theme in most oncologists approach to the clinical problem of cancer Therefore we hope that this book will introduce readers to treatment research in clinical oncology For the oncologist the clinical evaluation of antitumor therapy is both part of the day to day management of specific

patients and the critical consideration of developing therapeutic alternatives For physicians in other fields of medicine it is important to acquaint themselves with the basic tools of the oncologist For people without medical training including patients who might be interested in treatment research many of the chapters may be overly technical
