Radiation Effects In Advanced Semiconductor Materials And Devices:

Radiation Effects in Advanced Semiconductor Materials and Devices C. Claeys, E. Simoen, 2013-11-11 In the modern semiconductor industry there is a growing need to understand and combat potential radiation damage problems Space applications are an obvious case but beyond that today's device and circuit fabrication rely on increasing numbers of processing steps that involve an aggressive environment where inadvertent radiation damage can occur This book is both aimed at post graduate researchers seeking an overview of the field and will also be immensely useful for nuclear and space engineers and even process engineers A background knowledge of semiconductor and device physics is assumed but the basic concepts are all briefly summarized Finally the book outlines the shortcomings of present experimental and modeling techniques and gives an outlook on future developments

Point Defects in Semiconductors and Insulators Johann-Martin Spaeth, Harald Overhof, 2013-04-17 The precedent book with the title Structural Analysis of Point Defects in Solids An introduction to multiple magnetic resonance spectroscopy appeared about 10 years ago Since then a very active development has occurred both with respect to the experimental methods and the theoretical interpretation of the experimental results It would therefore not have been sufficient to simply publish a second edition of the precedent book with corrections and a few additions Furthermore the application of the multiple magnetic resonance methods has more and more shifted towards materials science and represents one of the important methods of materials analysis Multiple magnetic resonances are used less now for fundamental studies in solid state physics Therefore a more pedestrian access to the methods is called for to help the materials scientist to use them or to appreciate results obtained by using these methods We have kept the two introductory chapters on conventional electron paramagnetic resonance EPR of the precedent book which are the base for the multiple resonance methods The chapter on optical detection of EPR ODEPR was supplemented by sections on the structural information one can get from forbidden transitions as well as on spatial correlations between defects in the so called cross relaxation spectroscopy High field ODEPR ENDOR was also added The chapter on stationary electron nuclear double resonance ENDOR was supplemented by the method of stochastic ENDOR developed a few years ago in Paderborn which is now also commercially available
